Nano PLCs

Presentation

New features on Nano PLCs

The range of Nano PLCs includes new functions with :

- Non-extendable Nano PLC bases for small configurations.
- Nano PLC extensions which can be used to augment extendable Nano PLC bases at minimum cost.
- Analogue I/O extension modules (with $\sim 100\ldots 240$ V or ~ 24 V power supply) incorporating 3 inputs and 1 output.

Presentation

Nano PLCs are very compact and offer a cost-effective replacement for traditional solutions while increasing application flexibility and ease of wiring.

Nano PLCs are available in 3 formats :

- Nano PLC bases with 10, 14, 16, 20 or 24 non-extendable I/O.
- Nano PLC bases with 10, 16 or 24 extendable I/O, which can be augmented with an I/O extension and up to 3 PLC extensions.
- Nano PLC extensions with 16 or 24 I/O which can be used to augment extendable Nano PLC bases (1 extension per base).

Non-extendable Nano PLC bases

Nano PLCs with 10 I/O

Non-extendable Nano PLC bases will not accept any extension. They all have a $\sim 100\ldots 240$ V power supply, depending on the model :

- 10 I/O : 6 inputs + 4 outputs and 1 analogue input.
- 14 I/O : 8 inputs + 6 outputs.
- 16 I/O : 9 inputs + 7 outputs and 1 analogue input.
- 20 I/O : 12 inputs + 8 outputs.
- 24 I/O : 14 inputs + 10 outputs and 1 analogue input.

The following types of inputs and outputs are used :

- Inputs : ~ 24 V (sensor supply is not protected).
- Outputs : relay.

These PLCs incorporate extended communication : Uni-Telway master/slave link or ASCII link for transmission/reception.

Models with 10, 14 and 20 I/O do not have a real-time clock.

Nano PLCs with 14/16 I/O

Nano PLCs with 20/24 I/O

Nano PLCs

Presentation (continued)

Extendable Nano PLC bases

Nano PLCs with 10 I/O

Nano PLCs with 16 I/O

Nano PLCs with 24 I/O
Nano PLCs with 16 I/O (~ inputs)

Nano PLCs, with ≈ 24 V or $\sim 100...240$ V power supply, are available with three different I/O combinations :

- 10 I/O : 6 inputs + 4 outputs.
- 16 I/O : 9 inputs + 7 outputs.
- 24 I/O : 14 inputs + 10 outputs.

There are many types of I/O :

- Inputs : ≈ 24 V, ~ 115 V, analogue 0/10 V.
- Outputs : relay outputs, transistor outputs ≈ 24 V/0.5 A (positive logic : load common at "-"), transistor outputs ≈ 24 V/0.5 A (negative logic : load common at "+").

Nano PLCs are programmed in lists of instructions using the FTX 117 programming terminal, in Ladder or Instruction list language using software on an FT 2000, FTX 517 terminal or PC compatible. Instruction list and Ladder programs are reversible on FTX terminals or PC compatibles.

Nano PLCs are easy to set up and have numerous built-in functions (EEPROM memory for storing programs, battery-backed RAM, real-time clocks for models with 16 and 24 I/O). They can be installed easily on a mounting rail or base plate, in a vertical or horizontal position.

Nano PLC extensions

Nano PLC extensions with 16 I/O

Nano PLC extensions with 24 I/O

Nano PLC extensions can be used to augment extendable Nano PLCs using a single extension per base.

They all have a $\sim 100...240$ V or ≈ 24 V power supply and, depending on the model :

- 16 I/O : 9 inputs + 7 outputs.
- 24 I/O : 14 inputs + 10 outputs.

The following types of inputs and outputs are used :

- Inputs : ≈ 24 V.
- Outputs : relay outputs for models with $\sim 100...240$ V power supply, transistor outputs with positive logic for models with ≈ 24 V power supply.

Each extendable Nano base PLC **1** can be augmented using an I/O extension **2**, made up of one of the extendable Nano PLCs or a Nano extension.
In addition, up to three PLC extensions **3**, **4** and **5** communicating via exchange words can be connected to the base PLC.
Only the base PLC can receive an I/O extension.

This extension link can be used exclusively as a Modbus slave link.

Nano PLCs

Description (continued)

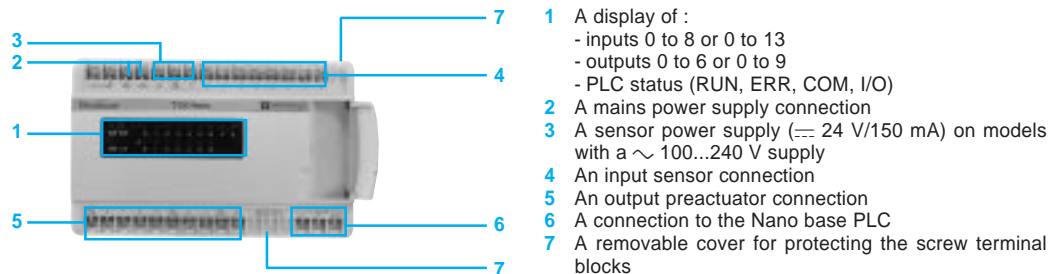

Nano PLCs (with integrated analogue input)

The front panels of **TSX 07 32/33 ●●28** Nano PLCs with 10/16/24 I/O and 1 integrated analogue input comprise :

Nano PLC extensions

The front panels of **TSX 07 EX ●●●●** Nano PLC extensions comprise :

Program loader

The TSX PGR LDR module is designed to simplify duplicating or updating applications on Nano and Micro PLCs without the need for a programming terminal. An application (in internal RAM) can be transferred from a PLC to the TSX PGR LDR module (and saved within it), then transferred from the TSX PGR LDR module to a PLC.

The front panel of the **TSX PGR LDR** module comprises :

Nano PLCs

Functions

I/O extension (1)

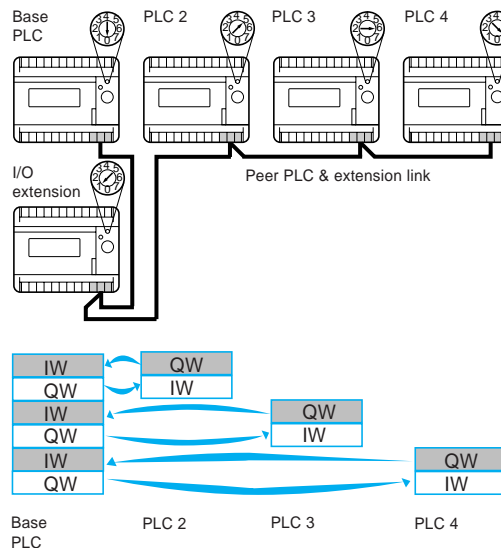

Each Nano base PLC can be extended using an I/O extension. This extension is created by one of the PLCs with 10, 16 or 24 I/O. The function of each PLC is defined by the position of the coding selector switch :

- Position 0 : base PLC
- Position 1 : I/O extension

The extension link cable between the base PLC and the I/O extension is a shielded, twisted pair and is no more than 200 metres long.

Peer PLCs (1)

Up to 3 peer PLCs, communicating via common words, can be connected to the base PLC. In this case, only the base PLC can receive an I/O extension. The function of each PLC is defined by the position of the coding selector switch. I/O addressing of peer PLCs is identical to that of the base PLC.

The extension link cable between the base PLC and PLC extensions is a shielded, twisted pair and is no more than 200 metres long.

Inter-PLC communication

Each PLC has 2 reserved (IW) and 2 reserved (QW) words for exchanging data between PLCs. These exchange words are updated automatically. For each PLC, the user program is only able to :

- Write to the 2 %QW output words
- Read the 2 %IW input words

Displaying the I/O, internal bits and PLC status

State of 8 internal bits if %S69 = 1

The results of the self-tests performed continuously by the base PLC, peer PLCs and I/O extensions are displayed on the front panel by 4 indicator lamps :

- RUN : PLC status
- ERR : internal fault
- COM : data exchange on the extension link
- I/O : I/O fault

I/O display

The state of each I/O is displayed on the front panel of the PLC by an indicator lamp : when the lamp is on, the I/O is active, when the lamp is off, the I/O is inactive.

Internal bits display

When the PLC system bit %S69 is set to 1, the first indicator lamps show the state of 8 or 16 defined internal bits (%M120...%M127 or %M112...%M127).

State of 16 internal bits if %S69 = 1

Dedicated I/O

The RUN/STOP input will launch or stop program execution from an external order. After configuration, one of the first 6 inputs (%I0.0 to %I0.5) can be assigned to this function. One of the first 4 outputs (%Q0.0 to %Q0.3) can be configured to indicate to the user that the PLC program is not running (STOP or fault).

(1) TSX 07 30/31 PLCs can no longer receive an I/O extension or peer PLC when the integrated Modbus link is in use. TSX 07 32/33 ●●28 and TSX 07 3L ●●28 PLCs cannot take an I/O extension or peer PLC.

Nano PLCs

Functions (continued)

Real-time based programming

Nano PLCs with 16 or 24 I/O integrate 16 user-definable real-time clocks which can be used to :

- Control the outputs directly (opening and closing electrical circuits) or act on the user program according to the time (month, day, hour and minute).
- Program time setpoints which can be modified via an operator panel or calculated by the program.
- Program event time-stamping or perform time calculations.

Analogue I/O

The Nano PLC is designed for simple process control applications (level, temperature, flow rate control, etc) with speed controller or servo-valve control.

TSX AEN/ASN modules are used with Nano PLCs to process 1 analogue input and 1 analogue output respectively :

- The input module, 0/10 V - 10/+ 10 V or 4/20 mA is connected to the $\frac{24}{-}$ V input %I0.0 of the PLC and is configured in frequency meter mode.
 - The output module, 0/10 V - 10/+ 10 V or 4/20 mA uses the pulse width modulation transistor output %Q0.0.
- Analogue processing is also possible using three TSX 07 32/33 ●●28 bases which consist of 1 analogue input 0-10 V.

High-speed processing applications

On a base PLC or peer PLC, each of the first 6 inputs (%I0.0 to %I0.5) can be assigned to the latching function after configuration. This function is used to take account of input pulses with short durations, 100 μ s minimum.

Nano PLCs include standard functions which are easy to set up and can be used for adaptation to control systems requiring counting capacity or short response times :

- Fast counter (maximum frequency 10 kHz)
- Fast up/down counter (maximum frequency 1 kHz)
- Frequency meter (maximum frequency 10 kHz)

Sensors which are used on the up/down counter inputs (%I0.0 and %I0.3) must have solid state outputs.

2 reflex outputs (%Q0.1 and %Q0.2) are controlled directly by the fast counter (without waiting for outputs to be updated at the end of the scan) according to a matrix predefined during configuration.

Pulse outputs

After configuration, the first output %Q0.0 (if it is a transistor output) of the Nano PLC can be used with :

- The **PWM** software function, as a pulse width modulation output at a predefined frequency of up to 4.9 kHz designed for use in applications with light or sound intensity control (dimmer function).
- The **PULSE** software function, as a pulse generator output of up to 4.9 kHz designed for use for controlling stepper motors.

Nano PLCs

Functions (continued)

Uni-Telway communication

The Nano PLC can communicate with other Uni-Telway devices via the terminal port : speed controllers, operator terminals, compact or modular PLCs.

The ability to send and receive messages means that Nano PLCs can be integrated in distributed architectures.

In slave mode, for example, the Nano PLC can initiate communication and send updated variables to the bus master (local reflex processing).

28 Nano slave PLCs can be connected to the Uni-Telway bus over a distance of 1 km (isolated for speeds of 1.2 to 9.6 K bits/s).

Modbus slave communication

Nano PLCs have an RS 485 serial link extension port, supporting the Modbus protocol (depending on the model). It is used to perform the following requests :

- Read/write bits and words
- Read PLC status (via Uni-TE request)
- Set to RUN or STOP mode (via Uni-TE request)
- Initialise the PLC (via Uni-TE request)

Up to 28 Nano PLCs can be connected over a distance of 200 m for user-definable speeds of 1.2 to 19.2 K bits/s.

ASCII communication

The ability to send and receive characters enables the Nano PLC to communicate in point-to-point mode with a large number of ASCII devices, such as PCs (directly or via modem), printers, bar code readers, etc.

Frame speed and format can be configured. Connection to the Nano PLC terminal port is via an RS 232/485 converter cable powered by the PLC.

Modem application (Modbus or Uni-Telway protocol)

A PLC fitted with a Modbus or Uni-Telway master module interrogates Nano PLCs via the switched telephone network.

When connected to a Modem in RS 485 mode, the master can use the link to generate dialling sequences for remote sites.

Each Nano PLC responds to requests from the master, but is also able to trigger a call by activation of a discrete input on the Modem.

Target applications (with Modbus or Uni-Telway) :

- System teleprocessing
- Telemonitoring of remote sites
- Water, energy, environment control

The Uni-Telway slave link of Nano PLCs can also be used for :

- Up/down loading programs
- Programming and remote diagnostics

24	14 24 V	10	1 x 0...10 V	TSX 07 33 2428	0.290

Nano PLC extensions

These extensions can be used to augment extendable Nano PLC bases at minimum cost (maximum 1 extension per base).

Number of I/O	Inputs	Relay outputs	Transistor outputs 24 V/0.5 A	Reference (1)	Weight kg
24 V power supply					
16	9 24 V	–	7 protected, positive logic	TSX 07 EX 1612	0.325
24	14 24 V	–	10 protected, positive logic	TSX 07 EX 2412	0.370
~ 100...240 V power supply					
16	9 24 V	7	–	TSX 07 EX 1628	0.360
24	14 24 V	10	–	TSX 07 EX 2428	0.410

(1) Multilingual quick reference guide included as standard (English, French, German, Italian and Spanish).
(2) TSX 07 32/33 28 PLCs do not have I/O extension and/or PLC extension links or the Modbus slave link.

Dimensions, mounting

Dimensions

Mounting

By clicking onto 35 mm DIN rail, or by screwing onto panel using Ø M3 screws

Mounting

Removal

Mounting positions on vertical plane

Possible mounting positions

Incorrect mounting position

1 End stop AB1-AB8P35

2 Access cover

Installation rules

1 Switchgear, enclosure or machine frame

2 Cable ducting or clips

$a \geq 20$ mm

$b \geq 40$ mm

Warning : Avoid placing heat generating devices (transformers, power supplies, contactors, etc) beneath the Nano PLC.

Connection of extensions Connection to Modbus and Uni-Telway buses

Characteristics :
pages 40050/9 to 40050/11
References :
pages 40050/12 to 40050/14

Connection of extensions

- (1) TSX CA0 003 cable (0.3 m long) or shielded twisted pair cable.
(2) Remote location (200 m max) of Nano PLC extensions requires either :
- TSX STC 050 cable (50 m long) or TSX STC 200 (200 m long), or
 - Shielded twisted pair cable with the following main characteristics :
 - Mechanical characteristics : tinned copper core, 18 to 24 gauge with tinned copper shielding
 - Electrical characteristics : load resistance per unit length of one wire : $\leq 85 \Omega/\text{km}$, load resistance per unit length of shielding : $\leq 12 \Omega/\text{Km}$

Connection of Modbus bus

- (1) Shielded twisted pair cable

Connection of Uni-Telway bus

- 1 **TSX CSA ●●●** : bus cable, double twisted shielded pair. The shielding must be taken to earth at each device.
- 2 **TSX SCA 62** : passive 2-channel subscriber socket (see page 43594/5).
- 3 **XBT-Z908** : connecting cable between the CCX 17 operator panel and the TSX SCA 62 subscriber socket (see page 43594/5).
- 4 **TSX PCU 1030** : Uni-Telway connecting cable between the PC compatible FT 2000 terminal and the TER port of Nano PLCs or TSX P ACC 01 connectors.
FTX CBF 020 : Uni-Telway connecting cable between the FTX 517 terminal and the TER port of Nano PLCs or TSX P ACC 01 connectors.
- 5 **TSX P ACC 01** : cable connector from a Nano PLC to the Uni-Telway bus via the PLC terminal port. The connecting cable (1 m long) is integrated in the cable connector. It isolates signals (over a distance > 10 m) and adapts line termination impedance. It is also used to select the terminal port (Uni-Telway master/slave or character mode).
