General Description

Designed on Fairchild's advanced 1.5V PowerTrench process with state of the art "low pitch" WLCSP packaging process, the FDZ191P minimizes both PCB space and $r_{DS(\text{on})}$. This advanced WLCSP MOSFET embodies a breakthrough in packaging technology which enables the device to combine excellent thermal transfer characteristics, ultra-low profile packaging, low gate charge, and low $r_{DS(\text{on})}$.

Application

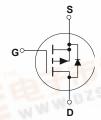

- Battery management
- Load switch
- Battery protection

^{1:} R_{0,JA} is determined with the device mounted on a 1in² pad 2 oz copper pad on a 1.5 x 1.5 in. board of FR-4 material. The thermal resistance from the junction to the circuit board side of the solder ball, R_{0,JB} is defined for reference. For R_{0,JC} the thermal reference point for the case is defined as the top surface of the copper chip carrier. R_{0,JC} and R_{0,JB} are guaranteed by design while R_{0,JA} is determined by the user's board design.
