

# HT38A5

## 12 Melody Music Generator

### Features

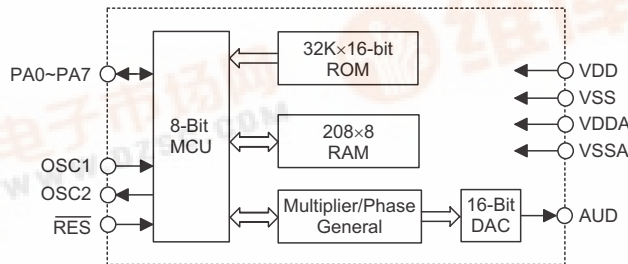

- Operating voltage: 2.4V~5.0V
- Operating frequency: 8MHz
- Two operating mode MCU control mode key control mode
- Low voltage detect
- Volume control
- Hold key
- Rang detect
- Hook
- Mono output
- High D/A converter resolution: 16 bits
- Polyphonic up to 8 notes
- 16-pin DIP, 20-pin SOP package

### General Description

The HT38A5 is a CMOS VLSI designed for musical instruments, especially 12 melody songs. The HT38A5 is built-in with a controller and an WTS (Wave Table Synthesizer).

The HT38A5 has applications in areas such as phone ringtones, high function toys, musical boxes, doorbells etc.

**Pad Description**

Pad Name	I/O	Internal Connection	Function
PA0~PA7	I/O	Pull-High or None	Mode select and control pia.
VSSA	—	—	Negative power supply of DAC, ground
VSS	—	—	Negative power supply, ground
VDD	—	—	Positive power supply
VDDA	—	—	DAC power supply
TEST	—	—	No connection (open)
AUD	O	—	Audio output for driving a external transistor or for driving HT82V733
RES	I	—	Reset input, active low
OSC1 OSC2	I O	—	OSC1 and OSC2 are connected to an RC network or a crystal (by mask option) for the internal system clock. In the case of RC operation, OSC2 is the output terminal for 1/8 system clock. The system clock may come from the crystal, the two pins cannot be floating.

**Absolute Maximum Ratings**

Supply Voltage .....	$V_{SS}-0.3V$ to $V_{SS}+5.5V$	Storage Temperature .....	$-50^{\circ}C$ to $125^{\circ}C$
Input Voltage .....	$V_{SS}-0.3V$ to $V_{DD}+0.3V$	Operating Temperature .....	$-25^{\circ}C$ to $70^{\circ}C$

Note: These are stress ratings only. Stresses exceeding the range specified under "Absolute Maximum Ratings" may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

**Function Description**

Mode selection	PA0=0, key control mode PA0=1, MCU control mode
Low voltage detect	PA4=0,(normal) ;PA4=1(low voltage active, program stop)

**Key Control Mode**

PA1: Melody select key	This key chooses and plays one of the 12 stored musical melodies. When the key is pressed the next melody in the list will be selected and played. When the HOLD key is pressed the telephone hold function will be activated and when an incoming ring signal is detected the music will be played.
PA2: Volume key	Controls the music volume in 8 discrete steps. Each time the key is pressed the volume will reduce one step at a time until the lowest volume is reached. When the lowest volume is reached, the next key press will return the volume to its maximum level.
PA3: Telephone Hold key	If this key is pressed during a phone conversation the phone will be put on hold and the caller can listen to the music while waiting. If, when the music is playing, the handset is lifted, the music will immediately stop playing. After this happens the HOLD function will have no effect for a period of 2 seconds.
PA6: Ring Detect	When an incoming 13Hz~90Hz ring signal is detected after a period of 200ms, the music will automatically start playing. When the incoming ring signal stops, after a period of 6 seconds the music will stop playing.
PA7: Hook Detect	This line detects the on/off hook condition of the telephone. Only when the telephone is in an on-hook condition, can the music be chosen and played. If the handset is lifted to talk, the music will stop playing and the HOLD key will be effective.

**Communication with External MCU Control Mode (Clock Mode) Communication with External CPU**

PA6:clock pin	Clock from external CPU
PA7:data pin	Data from external CPU

**Timing Chart**

Note: 400ms after power up, the device will be ready to communicate with the external CPU using the CLK and DATA lines.

Communication via the CLK and DATA lines is conducted in a simple manner. The device will obtain its data on the high going edge of the CLK line. If the device does not receive a complete byte within 50ms then the present byte will be discarded and the next byte will then be received.

Even-parity is used for data checking. For the previous 8-bits, if the total number of "1s" is odd then the parity bit is set to "1", otherwise it is set to "0". If the parity is incorrect then the byte will be discarded.

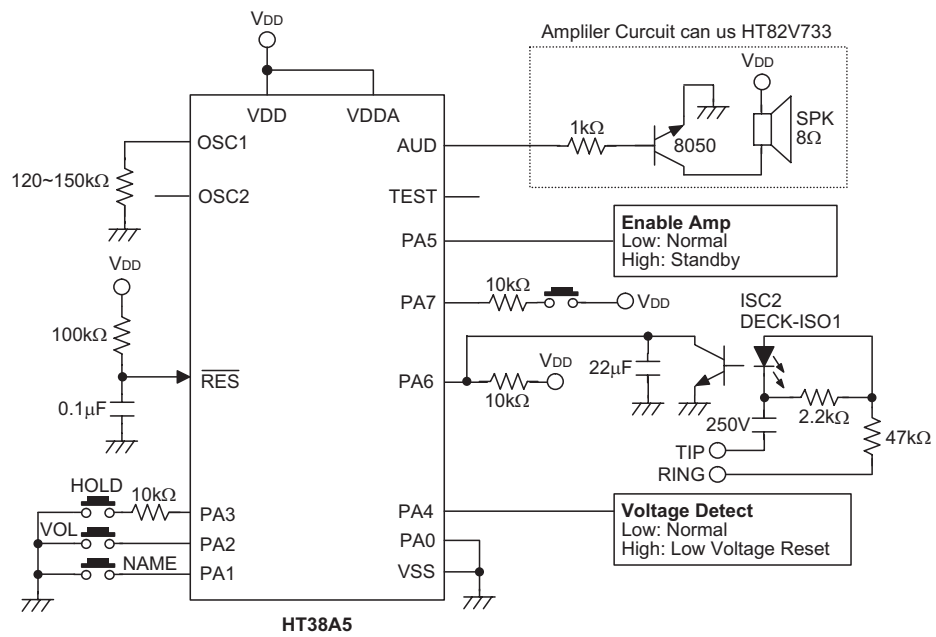

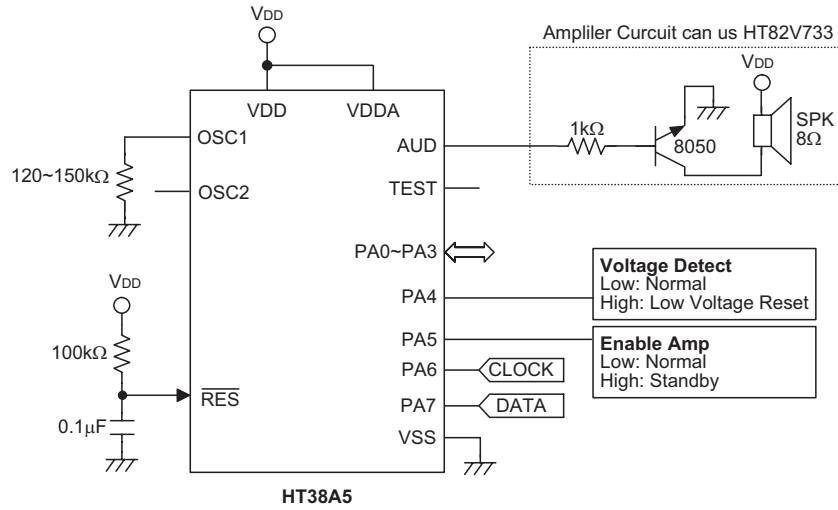

**Data Type (Command)**

00h~0bh	This command will select and play one of the 12 stored musical melodies. If the chosen melody number exceeds the highest number of that stored in the device then the command will be ignored and no action taken.
40h-4fh	16 level volume control, 40h refers to highest volume
50h	Stop play

**Melody List**

Command	English Song Name
00h	Toreador Song
01h	Jingle Bells
02h	Chinese New Year
03h	Santa Lucia
04h	My Old Kentucky Home
05h	La Cucaracha
06h	Allegro
07h	I'm a Little Teapot
08h	Sabre Dance
09h	Happy Birthday to You
0Ah	Working on the Railroad
0Bh	Radetzky March
