

# NEC's LOW POWER GPS RF RECEIVER BIPOLAR ANALOG + INTEGRATED CIRCUIT

UPB1009K

## DESCRIPTION

The  $\mu$ PB1009K is a silicon monolithic IC developed for GPS receivers. This IC integrates a full VCO, second IF filter, 4-bit ADC, and digital control interface to reduce cost and mounting space. In addition, its power consumption is low.

Moreover, use of a TCXO with frequency of 16.368 MHz/16.384 MHz, 14.4 MHz, 19.2 MHz, or 26 MHz switchable with an on-chip divider is possible.

NEC's stringent quality assurance and test procedures ensure the highest reliability and performance.

## FEATURES

- Double conversion :  $f_{REFin} = 16.368 \text{ MHz}$ ,  $f_{1stIFin} = 61.380 \text{ MHz}$ ,  $f_{2ndIFin} = 4.092 \text{ MHz}$   
:  $f_{REFin} = 14.4, 16.384, 19.2, 26 \text{ MHz}$ ,  $f_{1stIFin} = 62.980 \text{ MHz}$ ,  $f_{2ndIFin} = 2.556 \text{ MHz}$
- Multiple system clocks : On-chip switchable frequency divider ( $1/N = 100, 3/256, 9/1024, 65/4096$ )
- A/D converter : On-chip 4-bit A/D converter
- High-density RF block : On-chip VCO tank circuit and 2ndIF filter
- Supply voltage :  $V_{CC} = 2.7 \text{ to } 3.3 \text{ V}$
- Low current consumption :  $I_{CC} = 26.0 \text{ mA TYP. @ } V_{CC} = 3.0 \text{ V, } N = 100$
- High-density surface mountable : 44-pin plastic QFN

## APPLICATIONS

- Consumer use GPS receiver of reference frequency 16.368 MHz, 2nd IF frequency 4.092 MHz
- Consumer use GPS receiver of reference frequency 14.4, 16.384, 19.2, 26 MHz, 2ndIF frequency 2.556 MHz

Caution Observe precautions when handling because these devices are sensitive to electrostatic discharge.

**ORDERING INFORMATION**

Part Number	Package	Supplying Form
$\mu$ PB1009K-E1-A	44-pin plastic QFN	<ul style="list-style-type: none"><li>• 12 mm wide embossed taping</li><li>• Pin 1 indicates pull-out direction of tape</li><li>• Qty 1.5 kpcs/reel, Dry pack specification</li></ul>

**Remark** Typical performance. Please refer to **ELECTRICAL CHARACTERISTICS** in detail.

**SYSTEM APPLICATION EXAMPLE**
**GPS receiver RF block diagram**

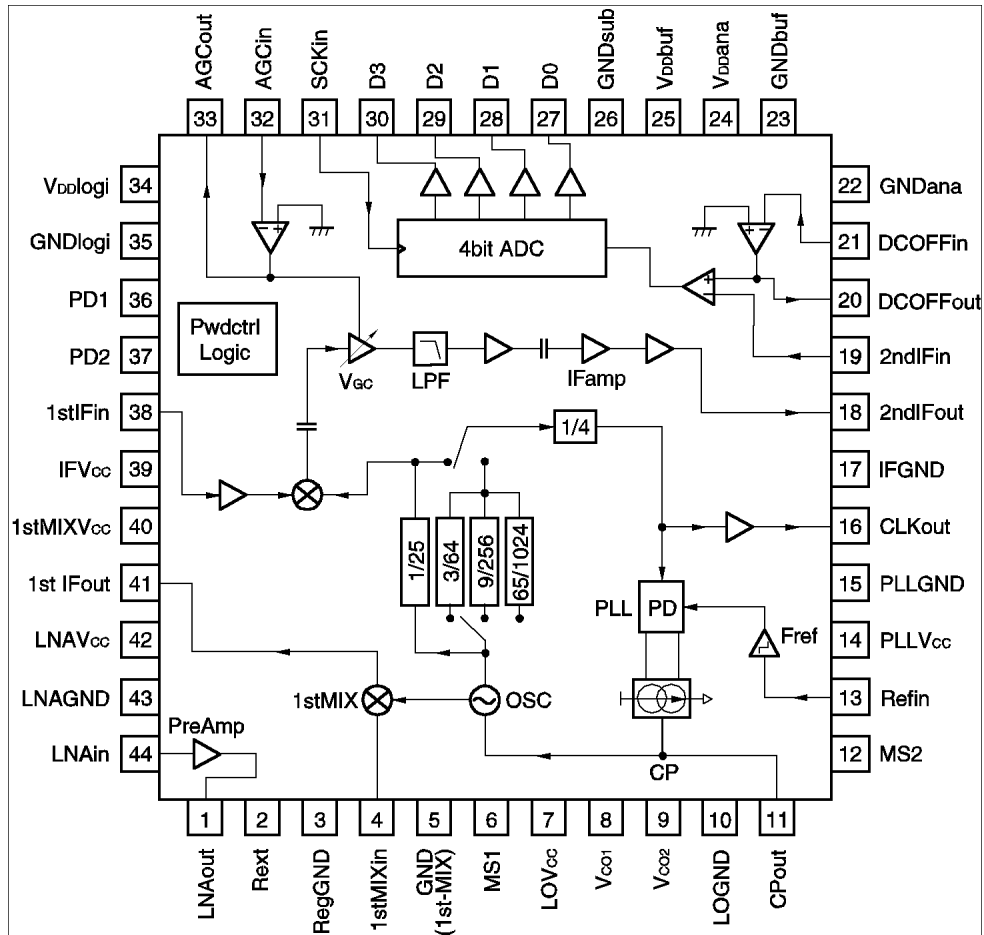

PD1 and PD2 in the figure are Power Save Mode control pins.

MS1 and MS2 in the figure are TXCO (GPS, W-CDMA, PDC, GSM) control pins.

**Caution** This diagram schematically shows only the μPB1009K's internal functions on the system. This diagram does not present the actual application circuits.

## PIN CONNECTION AND INTERNAL BLOCK DIAGRAM

**PIN EXPLANATION**

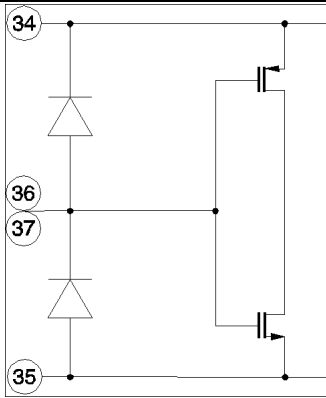

Pin No.	Pin Name	Function and Application	Internal Equivalent Circuit
1	PreAMPout	Output pin of preamplifier.	
2	Rext	Connect a resistor for the reference constant-current power supply to this pin. Ground this pin at 22 kΩ.	
3	RegGND	Ground pin for regulator.	
42	PreAmpV <sub>cc</sub>	Power supply voltage pin for preamplifier. Connect a bypass capacitor to this pin to reduce the high-frequency impedance.	
43	PreAmpGND	Ground pin of preamplifier.	
44	PreAmpin	Input pin of preamplifier.	
4	1stMIXin	1stMIX input pin.	
5	1stMIXGND	Ground pin for first MIX.	
40	1stMIXV <sub>cc</sub>	Power supply voltage pin for RF mixer. Connect a bypass capacitor to this pin to reduce the high-frequency impedance.	
41	1stIFout	Output pin of RF mixer. Insert an IFSAW filter between this pin and pin 37. The VCO oscillation signal can be monitored on this pin.	

Pin No.	Pin Name	Function and Application			Internal Equivalent Circuit
6 12	MS1 MS2	Low : 0 to 0.3 (V)  High : $V_{CC} - 0.3$ to $V_{CC}$ (V)	MS1 : L MS2 : L  MS1 : L MS2 : H  MS1 : H MS2 : L  MS1 : H MS2 : H	TCXO : 16.368, 16.384 MHz  TCXO : 19.2 MHz  TCXO : 14.4 MHz  TCXO : 26 MHz	
11	CPout	Output pin of charge pump. Connect external R and C to this pin to set a dumping factor and natural angular frequency ( $I_{sink} = I_{source} = 0.45$ mA).			
13	Refin	Reference frequency input pin. Connect an external reference transmitter (such as TCXO) to this pin.			
14	PLL $V_{CC}$	Power supply voltage pin of PLL. Connect a bypass capacitor to this pin to reduce the high-frequency impedance.			
15	PLL $GND$	Ground pin of PLL.			
16	CLKout	Clock (f <sub>rxo</sub> ) output pin (IC test pin).			

Pin No.	Pin Name	Function and Application	Internal Equivalent Circuit
7	LoV <sub>cc</sub>	Power supply voltage pin of VCO. Connect a bypass capacitor to this pin to reduce the high-frequency impedance.	
8	VCO1	IC test pin.	
9	VCO2	Leave this pin open when the $\mu$ PB1009K is mounted on board.	
10	LoGND	Ground pin of VCO.	
17	IFGND	Ground pin of IF block.	
18	2ndIFout	Output pin of IF amplifier.	
38	1stIFin	Input pin of second IF mixer.	
39	IFV <sub>cc</sub>	Power supply voltage pin of IF block.	

Pin No.	Pin Name	Function and Application	Internal Equivalent Circuit
19	2ndIFin	Input pin of ADC buffer amplifier.	
20	DCOFFout	Output pin of DC trimming OP amplifier.	
21	DCOFFin	DC trimming pulse input pin. Connect this pin to pin 20 via a capacitor to convert an input pulse signal into DC.	
22	GNDana	Ground pin for OP amplifier and ADC power supply.	
23	GNDbuf		
24	VDDana	Power supply pin for OP amplifier and ADC comparator.	
25	VDDbuf	Power supply pin for output driver amplifier of ADC. Connect this pin to the ground pin of the A/D converter via a bypass capacitor to reduce the high-frequency impedance.	
26	GNDsub	Ground pin of CMOS substrate.	
27	D0	Digital signal output pins. LSB = D0, MSB = D3	
28	D1		
29	D2		
30	D3		
31	SCKin	Sampling clock signal input pin.	
32	AGCin	AGC control pulse signal input pin.	
33	AGCout	AGC control signal output pin.	

Pin No.	Pin Name	Function and Application			Internal Equivalent Circuit
34	V <sub>DD</sub> logi	Power supply voltage pin for power control logic.			
35	GNDlogi	Ground pin for power control logic.			
36	PD1	Low : 0 to 0.3 (V)  High : V <sub>CC</sub> – 0.3 to V <sub>CC</sub> (V)	PD1 : L PD2 : L	Sleep mode (all circuits off).	
37	PD2		PD1 : L PD2 : H	Warm-up mode (PLL on).	
			PD1 : H PD2 : L	Calibration mode (PLL + IF + ADC on).	
			PD1 : H PD2 : H	Active mode (all circuits on).	

**ABSOLUTE MAXIMUM RATINGS**

Parameter	Symbol	Test Conditions	Ratings	Unit
Supply Voltage	$V_{CC}$	$T_A = +25^{\circ}\text{C}$	3.6	V
Total Circuit Current	$I_{CC\text{Total}}$	$T_A = +25^{\circ}\text{C}$	100	mA

Power-down control voltage (High Level)	$V_{\text{IH2}}$	$V_{CC} - 0.3$	–	$V_{CC}$	V

### POWER-DOWN CONTROL MODE

The  $\mu$ PB1009K consists of an RF block, an IF block, and a PLL block. By controlling reduction of power to each block (by applying a voltage to the PD1 and PD2 pins), the following four modes can be used.

Mode No.	Mode Name	Test Conditions		RF Block	IF Block (IF + ADC)	PLL Block
		PD1	PD2			
1	Active mode	L	H	ON	ON	ON
2	Calibration mode	H	H	OFF	ON	ON
3	Warm-up mode	H	L	OFF	OFF	ON
4	Sleep mode	L	L	OFF	OFF	OFF

**Caution** To use only the active mode and sleep mode, fix PD1 to L and select the desired mode with PD2.

### REFERENCE CLOCK CONTROL MODE

The divided frequency can be selected as follows so that it can be shared with the TCXO of each system.

TCXO Frequency	Test Conditions		1/N	Phase Comparison Frequency
	PD1	PD2		
16.368 MHz (GPS) 16.384 MHz (GPS)	L	L	1/100	16.368 MHz 16.384 MHz
19.2 MHz (W-CDMA)	L	H	3/256	19.2 MHz
14.4 MHz (PDC)	H	L	9/1024	14.4 MHz
26 MHz (GSM)	H	H	65/4096	26 MHz

**Caution** When the reference clock frequency is 16.368 MHz, the 1stIF frequency and 2ndIF frequency are 61.38 MHz and 4.092 MHz, respectively. They are respectively 62.98 MHz and 2.556 MHz in all other cases.

**ELECTRICAL CHARACTERISTICS (T<sub>A</sub> = +25°C, V<sub>CC</sub> = 3.0 V)**

Parameter	Symbol	Test Conditions	MIN.	TYP.	MAX.	Unit
Rest current of overall IC in each mode	Rest status without input signal, including sampling clock. MS1 = L, MS2 = L

**Remarks 1.** Timing characteristics of ADC during normal operation

A buffer amplifier is internally inserted before the ADC core of the  $\mu$ PB1009K. The bias of this buffer amplifier is controlled by the signal input from the DC trim pin, and is used to eliminate the DC offset of the ADC. Because the ladder resistor of the ADC is directly connected between V<sub>DDana</sub> and GND<sub>ana</sub>, changes in V<sub>DDana</sub> affect the resolution of the ADC.

As illustrated in the operation timing chart below, the data of SampleN is pipeline delayed by 1.5 clocks during normal operation, and is output at the rising edge of the sample clock with output delay time  $T_{od}$ . When the operation is changed from normal operation to power-down operation, the status of the output data immediately before the power-down operation is retained (drive status).

The following table shows each timing parameter for reference purposes.

Symbol	Parameter	Test Conditions	MIN.	TYP.	MAX.	Unit
$T_{od}$	Output Delay	$C_L = 10 \text{ pF}$ , $f_{clk} = 19.2 \text{ MHz}$	–	–	12	ns
$T_{pld}$	Pipeline Delay		–	1.5	–	clock
$T_{ds}$	Sampling Delay (Aperture Delay)		–	2	–	ns
$T_{oh}$	Output Hold Time		2	–	–	ns

**Remarks 2.** Power-down timing characteristics of ADC

The output code of the ADC of the  $\mu$ PB1009K is undefined for 7.5 clocks after the power-down signal is cleared when the ADC returns from the power-down status to normal operation.

**Note** The output data is undefined from the start of the power-down operation to the 7.5th clock from the falling edge of the clock at which the power-down operation is cleared.

## PACKAGE DIMENSIONS

44-PIN PLASTIC QFN (UNIT: mm)

**Caution** The island pins located on the corners are needed to fabricate products in our plant, but do not serve any other function. Consequently the island pins should not be soldered and should remain non-connection pins.

## NOTES ON CORRECT USE

- (1) Observe precautions for handling because of electro-static sensitive devices.
- (2) Form a ground pattern as widely as possible to minimize ground impedance (to prevent abnormal oscillation).
- (3) Keep the wiring length of the ground pins as short as possible.
- (4) Connect a bypass capacitor to the  $V_{CC}$  pin.
- (5) High-frequency signal I/O pins must be coupled with the external circuit using a coupling capacitor.

## RECOMMENDED SOLDERING CONDITIONS

This product should be soldered and mounted under the following recommended conditions. For soldering methods and conditions other than those recommended below, contact your nearby sales office.

Soldering Method	Soldering Conditions	Condition Symbol
Infrared Reflow	Peak temperature (package surface temperature) : 260°C or below Time at peak temperature : 10 seconds or less Time at temperature of 220°C or higher : 60 seconds or less Preheating time at 120 to 180°C : 120±30 seconds Maximum number of reflow processes : 3 times Maximum chlorine content of rosin flux (% mass) : 0.2%(Wt.) or below	IR260
VPS	Peak temperature (package surface temperature) : 215°C or below Time at temperature of 200°C or higher : 25 to 40 seconds Preheating time at 120 to 150°C : 30 to 60 seconds Maximum number of reflow processes : 3 times Maximum chlorine content of rosin flux (% mass) : 0.2%(Wt.) or below	VP215
Wave Soldering	Peak temperature (molten solder temperature) : 260°C or below Time at peak temperature : 10 seconds or less Preheating temperature (package surface temperature) : 120°C or below Maximum number of flow processes : 1 time Maximum chlorine content of rosin flux (% mass) : 0.2%(Wt.) or below	WS260
Partial Heating	Peak temperature (pin temperature) : 350°C or below Soldering time (per side of device) : 3 seconds or less Maximum chlorine content of rosin flux (% mass) : 0.2%(Wt.) or below	HS350

**Caution** Do not use different soldering methods together (except for partial heating).

### Life Support Applications

These NEC products are not intended for use in life support devices, appliances, or systems where the malfunction of these products can reasonably be expected to result in personal injury. The customers of CEL using or selling these products for use in such applications do so at their own risk and agree to fully indemnify CEL for all damages resulting from such improper use or sale.

Subject: Compliance with EU Directives

CEL certifies, to its knowledge, that semiconductor and laser products detailed below are compliant with the requirements of European Union (EU) Directive 2002/95/EC Restriction on Use of Hazardous Substances in electrical and electronic equipment (RoHS) and the requirements of EU Directive 2003/11/EC Restriction on Penta and Octa BDE.

CEL Pb-free products have the same base part number with a suffix added. The suffix –A indicates that the device is Pb-free. The –AZ suffix is used to designate devices containing Pb which are exempted from the requirement of RoHS directive (\*). In all cases the devices have Pb-free terminals. All devices with these suffixes meet the requirements of the RoHS directive.

This status is based on CEL's understanding of the EU Directives and knowledge of the materials that go into its products as of the date of disclosure of this information.

Restricted Substance per RoHS	Concentration Limit per RoHS (values are not yet fixed)	Concentration contained in CEL devices	
		-A	-AZ
Lead (Pb)	< 1000 PPM	Not Detected	(*)
Mercury	< 1000 PPM	Not Detected	
Cadmium	< 100 PPM	Not Detected	
Hexavalent Chromium	< 1000 PPM	Not Detected	
PBB	< 1000 PPM	Not Detected	
PBDE	< 1000 PPM	Not Detected	

If you should have any additional questions regarding our devices and compliance to environmental standards, please do not hesitate to contact your local representative.

Important Information and Disclaimer: Information provided by CEL on its website or in other communications concerning the substance content of its products represents knowledge and belief as of the date that it is provided. CEL bases its knowledge and belief on information provided by third parties and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. CEL has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. CEL and CEL suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall CEL's liability arising out of such information exceed the total purchase price of the CEL part(s) at issue sold by CEL to customer on an annual basis.

See CEL Terms and Conditions for additional clarification of warranties and liability.
