## 74F138 1-of-8 Decoder/Demultiplexer

#### **General Description**

The F138 is a high-speed 1-of-8 decoder/demultiplexer. This device is ideally suited for high-speed bipolar memory chip select address decoding. The multiple input enables allow parallel expansion to a 1-of-24 decoder using just three F138 devices or a 1-of-32 decoder using four F138 devices and one inverter.

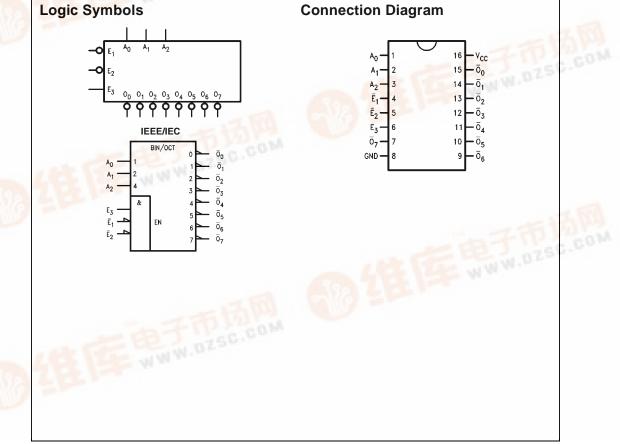

#### Features

- Demultiplexing capability
- Multiple input enable for easy expansion
- Active LOW mutually exclusive outputs

#### **Functional Description**

The F138 high-speed 1-of-8 decoder/demultiplexer accepts three binary weighted inputs (A<sub>0</sub>, A<sub>1</sub>, A<sub>2</sub>) and, when enabled, provides eight mutually exclusive active LOW outputs ( $\overline{O}_0$ - $\overline{O}_7$ ). The F138 features three Enable inputs, two active LOW ( $\overline{E}_1$ ,  $\overline{E}_2$ ) and one active HIGH ( $E_3$ ). All outputs will be HIGH unless  $\overline{E}_1$  and  $\overline{E}_2$  are LOW and  $E_3$  is HIGH. This multiple enable function allows easy parallel

expansion of the device to a 1-of-32 (5 lines to 32 lines) decoder with just four F138 devices and one inverter (See Figure 1). The F138 can be used as an 8-output demultiplexer by using one of the active LOW Enable inputs as the data input and the other Enable inputs as strobes. The Enable inputs which are not used must be permanently tied to their appropriate active HIGH or active LOW state.
