－Standard＇16244－Type Pinout
－ $5-\Omega$ Switch Connection Between Two Ports
－TTL－Compatible Input Levels
－Package Options Include Plastic Thin Shrink Small－Outline（DGG），Thin Very Small－Outline（DGV），and Shrink Small－Outline（DL）Packages，and Ceramic Flat（WD）Package

## description

The＇CBT16244 devices provide 16 bits of high－speed TTL－compatible bus switching in a standard＇16244 device pinout．The low on－state resistance of the switch allows connections to be made with minimal propagation delay．
These devices are organized as four 4－bit low－impedance switches with separate output－enable（ $\overline{\mathrm{OE}}$ ）inputs．When $\overline{\mathrm{OE}}$ is low，the switch is on，and data can flow from port A to port $B$ ，or vice versa．When $\overline{O E}$ is high，the switch is open，and a high－impedance state exists between the two ports．
The SN54CBT16244 is characterized for operation over the full military temperature range of $-55^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$ ．The SN74CBT16244 is characterized for operation from $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ ．

FUNCTION TABLE
（each 4－bit bus switch）

| INPUT <br> $\overline{\mathrm{OE}}$ | OUTPUTS <br> $\mathbf{A}, \mathrm{B}$ |
| :---: | :---: |
| L | A port＝B port |
| H | Z |

|  |  | $\mathrm{V}_{\mathrm{CC}}=4.5 \mathrm{~V}$ | $\mathrm{V}_{\mathrm{I}}=0$, | $\boldsymbol{I}=30 \mathrm{~mA}$ |  | 5 | 10 |  | 5 | 7 |  |
|  |  |  | $\mathrm{V}_{\mathrm{I}}=2.4 \mathrm{~V}$, | $\mathrm{I}=15 \mathrm{~mA}$ |  | 8 | 14 |  | 8 | 12 |  |

$\dagger$ All typical values are at $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$.
$\ddagger$ This is the increase in supply current for each input that is at the specified TTL voltage level rather than $V_{C C}$ or GND.
$\S$ Measured by the voltage drop between the $A$ and $B$ terminals at the indicated current through the switch. On-state resistance is determined by the lower of the voltages of the two ( $A$ or $B$ ) terminals.
switching characteristics over recommended operating free-air temperature range, $\mathrm{C}_{\mathrm{L}}=50 \mathrm{pF}$ (unless otherwise noted) (see Figure 1)

## PARAMETER MEASUREMENT INFORMATION

VOLTAGE WAVEFORMS PROPAGATION DELAY TIMES

| TEST | S1 |
| :---: | :---: |
| $\mathrm{t}_{\text {pd }}$ | Open |
| $\mathrm{tPLZ}^{\mathrm{ttPZL}}$ | 7 V |
| $\mathrm{t}_{\mathrm{PHZ}} / \mathrm{tPZH}$ | Open |

NOTES: A. $C_{L}$ includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq 10 \mathrm{MHz}, \mathrm{Z}_{\mathrm{O}}=50 \Omega, \mathrm{t}_{\mathrm{r}} \leq 2.5 \mathrm{~ns}, \mathrm{t}_{\mathrm{f}} \leq 2.5 \mathrm{~ns}$.
D. The outputs are measured one at a time with one transition per measurement.
E. tpLZ and tPHZ are the same as $\mathrm{t}_{\text {dis }}$.
F. tpZL and tPZH are the same as ten.
G. tPLH and tPHL are the same as tpd.

## IMPORTANT NOTICE

Texas Instruments and its subsidiaries $(\mathrm{TI})$ reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgment, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with Tl's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Customers are responsible for their applications using TI components.
In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. Tl's publication of information regarding any third party's products or services does not constitute Tl's approval, warranty or endorsement thereof.

[^0]:    * On products compliant to MIL-PRF-38535, this parameter is not production tested.

    IT The propagation delay is the calculated RC time constant of the typical on-state resistance of the switch and the specified load capacitance, when driven by an ideal voltage source (zero output impedance).
