## Electrical Schematic

## Bias Procedures

### Bias-up Procedure

Vg set to 0 V

Vd\_set to +6 V

Adjust Vg more positive until Idq is 1.26 A.

This will be ~ Vg = +0.6 V

### Bias-down Procedure

Turn off RF supply

Reduce Vg to 0 V. Ensure Id ~ 0 mA

Turn Vd to 0 V

## Assembly Notes

### Recommended Surface Mount Package Assembly

- Proper ESD precautions must be followed while handling packages.
- Clean the board with acetone. Rinse with alcohol. Allow the circuit to fully dry.
- TriQuint recommends using a conductive solder paste for attachment. Follow solder paste and reflow oven vendors' recommendations when developing a solder reflow profile. Typical solder reflow profiles are listed in the table below.
- Hand soldering is not recommended. Solder paste can be applied using a stencil printer or dot placement. The volume of solder paste depends on PCB and component layout and should be well controlled to ensure consistent mechanical and electrical performance.
- Clean the assembly with alcohol.
