MUTE STAND-BY FUNCTION

The pin 4 (MUTE/STAND-BY) controls the amplifier status by two different theresholds, referred to $+V_S$.

- When V_{pin4} higher than = $+V_S$ - 2.5V the amplifier is in Stand-by mode and the final stage generators are off.
- When V_{pin4} is between $+V_S$ - 2.5V and $+V_S$ - 6V the final stage current generators are switched on and the amplifier is in mute mode.
- When V_{pin4} is lower than $+V_S$ - 6V the amplifier is play mode.
