# FSA2467 0.4W Low Voltage Dual SPDT Analog Switch

#### **General Description**

The FSA2467 is a Quad Single Pole Double Throw (SPDT) analog switch. The FSA2467 operates from a single 1.65V to 4.3V supply. The FSA2467 features an ultra-low On Resistance of 0.4W at a +2.7V supply and 25°C. This device is fabricated with sub-micron CMOS technology to achieve fast switching speeds and is designed for break-before-make operation.

FSA2467 features very low quiescent current even when the control voltage is lower than the V<sub>CC</sub> supply. This feature services the mobile handset applications very well allowing for the direct interface with baseband processor general purpose I/Os.

#### Features

- Typical 0.4W On Resistance (R<sub>ON</sub>) for +2.7V supply
- $\blacksquare$  FSA2467 features less then 12µA I $_{CCT}$  current when ~S Input is lower than V $_{CC}$
- 0.25W maximum R<sub>ON</sub> flatness for +2.7V supply
- 3x3mm 16-lead Pb-Free MLP package
- Broad V<sub>CC</sub> operating range
- Low THD (0.02% typical for 32W load)

#### Applications

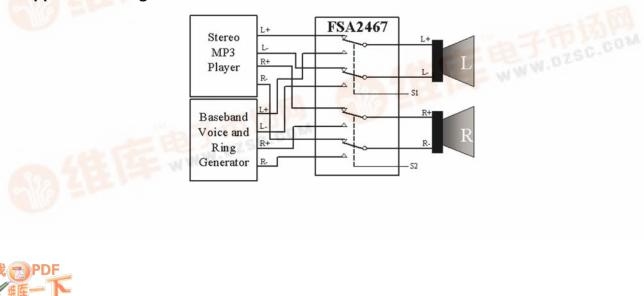

- Cell Phone
- PDA
- Portable Media Player
