

Dual and Quad, 8MHz and 60MHz, Low Noise Operational Amplifiers

Low noise and high performance are key words describing HA-5102, HA-5104 and HA-5114. These general purpose amplifiers offer an array of dynamic specifications ranging from a $3V/\mu s$ slew rate and 8MHz bandwidth (5102/04) to $20V/\mu s$ slew rate and 60MHz gain-bandwidth-product (HA-5114). Complementing these outstanding parameters is a very low noise specification of $4.3nV/\sqrt{Hz}$ at 1kHz.

Fabricated using the Intersil high frequency DI process, these operational amplifiers also offer excellent input specifications such as a 0.5mV offset voltage and 30nA offset current. Complementing these specifications are 108dB open loop gain and 60dB channel separation. Consuming a very modest amount of power (90mW/package for duals and 150mW/package for quads), HA-5102/04/14 also provide 15mA of output current.

This impressive combination of features make this series of amplifiers ideally suited for designs ranging from audio amplifiers and active filters to the most demanding signal conditioning and instrumentation circuits.

These operational amplifiers are available in dual or quad form with industry standard pinouts allowing for immediate interchangeability with most other dual and quad operational amplifiers.

HA-5102 Dual, Comp. HA-5104 Quad, Comp.

HA-5114 Quad, Uncomp.

Refer to the /883 data sheet for military product.

Ordering Information

| PART NUMBER | TEMP. RANGE ($^{\circ}C$) | PACKAGE | PKG. NO |
|-------------|-----------------------------|--------------|---------|
| HA3-5102-5 | 0 to 75 | 8 Ld PDIP | E8.3 |
| HA7-5102-2 | -55 to 125 | 8 Ld CERDIP | F8.3A |
| HA1-5104-2 | -55 to 125 | 14 Ld CERDIP | F14.3 |
| HA1-5104-5 | 0 to 75 | 14 Ld CERDIP | F14.3 |
| HA3-5104-5 | 0 to 75 | 14 Ld PDIP | E14.3 |
| HA9P5104-9 | -40 to 85 | 16 Ld SOIC | M16.3 |
| HA3-5114-5 | 0 to 75 | 14 Ld PDIP | E14.3 |
| HA9P5114-9 | -40 to 85 | 16 Ld SOIC | M16.3 |

Features

- Low Noise $4.3nV/\sqrt{Hz}$
- Bandwidth 8MHz (Compensated)
60MHz (Uncompensated)
- Slew Rate $3V/\mu s$ (Compensated)
 $20V/\mu s$ (Uncompensated)
- Low Offset Voltage 0.5mV
- Available in Duals or Quads

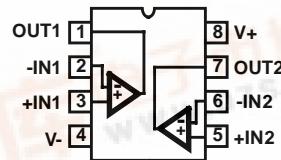

Applications

- High Q, Active Filters
- Audio Amplifiers
- Instrumentation Amplifiers
- Integrators
- Signal Generators
- For Further Design Ideas, See Application Note AN554

| Maximum Junction Temperature (Note 1, Hermetic Package) .. | 175°C | |
| Maximum Junction Temperature (Plastic Package) | 150°C | |
| Maximum Storage Temperature Range | -65°C to 150°C | |
| Maximum Lead Temperature (Soldering 10s) | 300°C | |
| (SOIC - Lead Tips Only) | | |

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. Maximum power dissipation, including output load, must be designed to maintain the maximum junction temperature below 175°C for hermetic packages, and below 150°C for plastic packages.
2. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.
3. Any one amplifier may be shorted to ground indefinitely.

NOTES:

4. Channel separation value is referred to the input of the amplifier. Input test conditions are: $f = 10\text{kHz}$; $V_{IN} = 100\text{mV}_{PEAK}$; $R_S = 1\text{k}\Omega$.
5. Full power bandwidth is guaranteed by equation: Full power bandwidth = $\frac{\text{Slew Rate}}{2\pi V_{PEAK}}$.
6. Refer to Test Circuits section of the data sheet.
7. Settling time is measured to 0.1% of final value for a 1V input step, and $A_V = -10$ for HA-5114, and a 10V input step, $A_V = -1$ for HA-5102/5104.
8. The limits for these parameters are guaranteed based on lab characterization, and reflect lot-to-lot variation.

Dual-In-Line Plastic Packages (PDIP)

NOTES:

1. Controlling Dimensions: INCH. In case of conflict between English and Metric dimensions, the inch dimensions control.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication No. 95.
4. Dimensions A, A1 and L are measured with the package seated in JEDEC seating plane gauge GS-3.
5. D, D1, and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch (0.25mm).
6. E and e_A are measured with the leads constrained to be perpendicular to datum $-C-$.
7. e_B and e_C are measured at the lead tips with the leads unconstrained. e_C must be zero or greater.
8. B1 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 inch (0.25mm).
9. N is the maximum number of terminal positions.
10. Corner leads (1, N, N/2 and N/2 + 1) for E8.3, E16.3, E18.3, E28.3, E42.6 will have a B1 dimension of 0.030 - 0.045 inch (0.76 - 1.14mm).

Ceramic Dual-In-Line Frit Seal Packages (CERDIP)

NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH

Ceramic Dual-In-Line Frit Seal Packages (CERDIP)

NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH.

Small Outline Plastic Packages (SOIC)

NOTES:

1. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. "L" is the length of terminal for soldering to a substrate.
7. "N" is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch)
10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
