## MOTOROLA

## Quad Single Supply Comparators

These comparators are designed for use in level detection，low－level sensing and memory applications in consumer automotive and industrial electronic applications．
－Single or Split Supply Operation
－Low Input Bias Current： 25 nA（Typ）
－Low Input Offset Current：$\pm 5.0 \mathrm{nA}$（Typ）
－Low Input Offset Voltage：$\pm 1.0 \mathrm{mV}$（Typ）LM139A Series
－Input Common Mode Voltage Range to Gnd
－Low Output Saturation Voltage： 130 mV （Typ）＠ 4.0 mA
－TTL and CMOS Compatible
－ESD Clamps on the Inputs Increase Reliability without Affecting Device Operation

## MAXIMUM RATINGS

| Rating | Symbol | Value | Unit |
| :--- | :---: | :---: | :---: |
| $\begin{array}{l}\text { Power Supply Voltage } \\ \text { LM239，A／LM339A／LM2901，V } \\ \text { MC3302 }\end{array}$ | $\mathrm{V}_{\mathrm{CC}}$ |  | Vdc |
| $\begin{array}{l}\text { Input Differential Voltage Range } \\ \text { LM239，A／LM339A／LM2901，V or } \pm 18 \\ \text { MC3302 }\end{array}$ |  | $\mathrm{V}_{\text {IDR }}$ |  |
| 30 or $\pm 15$ |  |  |  |$]$

NOTE：1．The maximum output current may be as high as 20 mA ，independent of the magnitude of $\mathrm{V}_{\mathrm{CC}}$ ． Output short circuits to $\mathrm{V}_{\mathrm{CC}}$ can cause excessive heating and eventual destruction．

NOTE：Diagram shown is for 1 comparator．

NOTES: 3. (LM239/239A) $\mathrm{T}_{\text {low }}=-25^{\circ} \mathrm{C}, \mathrm{T}_{\text {high }}=+85^{\circ}$
$\left(\right.$ LM339/339A) $\mathrm{T}_{\text {low }}=0^{\circ} \mathrm{C}, \mathrm{T}_{\text {high }}=+70^{\circ} \mathrm{C}$
(MC3302) $\mathrm{T}_{\text {low }}=-40^{\circ} \mathrm{C}, \mathrm{T}_{\text {high }}=+85^{\circ} \mathrm{C}$
(LM2901) $\mathrm{T}_{\text {low }}=-40^{\circ} \mathrm{C}$, $\mathrm{T}_{\text {high }}=+105^{\circ}$
$(\mathrm{LM} 2901 \mathrm{~V}) \mathrm{T}_{\text {low }}=-40^{\circ} \mathrm{C}$, $\mathrm{T}_{\text {high }}=+125^{\circ} \mathrm{C}$
4. At the output switch point, $\mathrm{V}_{\mathrm{O}} \simeq 1.4 \mathrm{Vdc}, \mathrm{R}_{\mathrm{S}} \leq 100 \Omega 5.0 \mathrm{Vdc} \leq \mathrm{V}_{\mathrm{CC}} \leq 30 \mathrm{Vdc}$, with the inputs over the full common mode range ( 0 Vdc to $\mathrm{V}_{\mathrm{CC}}-1.5 \mathrm{Vdc}$ ).
5. The bias current flows out of the inputs due to the PNP input stage. This current is virtually constant, independent of the output state
6. The response time specified is for a 100 mV input step with 5.0 mV overdrive. For larger signals, 300 ns is typical.

| CMOS | $1 / 4$ MC14001 | +15 | 100 |
| TTL | $1 / 4 \mathrm{MC} 7400$ | +5.0 | 10 |

Figure 8. Squarewave Oscillator

## APPLICATIONS INFORMATION

These quad comparators feature high gain, wide bandwidth characteristics. This gives the device oscillation tendencies if the outputs are capacitively coupled to the inputs via stray capacitance. This oscillation manifests itself during output transitions ( $\mathrm{V}_{\mathrm{OL}}$ to $\mathrm{V}_{\mathrm{OH}}$ ). To alleviate this situation input resistors $<10 \mathrm{k} \Omega$ should be used. The addition

Figure 9. Zero Crossing Detector (Single Supply)

D1 prevents input from going negative by more than 0.6 V .

$$
\begin{gathered}
\mathrm{R} 1+\mathrm{R} 2=\mathrm{R} 3 \\
\mathrm{R} 3 \leq \frac{\mathrm{R} 5}{10} \text { for small error in zero crossing }
\end{gathered}
$$

of positive feedback ( $<10 \mathrm{mV}$ ) is also recommended. It is good design practice to ground all unused input pins.

Differential input voltages may be larger than supply voltages without damaging the comparator's inputs. Voltages more negative than -300 mV should not be used.

Figure 10. Zero Crossing Detector (Split Supplies)
$\mathrm{V}_{\mathrm{in}(\min )} \approx 0.4 \mathrm{~V}$ peak for $1 \%$ phase distortion $(\Delta \Theta)$.
