# CD4034BM/CD4034BC 8-Stage TRI-STATE® Bidirectional Parallel/Serial Input/Output Bus Register

## CD4034BM/CD4034BC 8-Stage TRI-STATE® Bidirectional Parallel/Serial Input/Output Bus Register

### General Description

The CD4034BM/CD4034BC is an 8-bit CMOS static shift register with two parallel bidirectional data ports (A and B) which, when combined with serial shifting operations, can be used to (1) bidirectionally transfer parallel data between two buses, (2) convert serial data to parallel form and direct them to either of two buses, (3) store (recirculate) parallel data, or (4) accept parallel data from either of two buses and convert them to serial form. These operations are controlled by five control inputs:

**A ENABLE (AE):** "A" data port is enabled only when AE is at logical "1". This allows the use of a common bus for multiple packages.

**A-BUS-TO-B-BUS/B-BUS-TO-A-BUS (A/B):** This input controls the direction of data flow. When at logical "1", data flows from port A to B (A is input, B is output). When at logical "0", the data flow direction is reversed.

**ASYNCHRONOUS/SYNCHRONOUS (A/S):** When A/S is at logical "0", data transfer occurs at positive transition of the CLOCK. When A/S is at logical "1", data transfer is independent of the CLOCK for parallel operation. In serial mode, A/S input is internally disabled such that operation is always synchronous. (Asynchronous serial operation is not possible.)

**PARALLEL/SERIAL (P/S):** A logical "1" P/S input allows data transfer into the registers via A or B port (synchronous if A/S = logical "0", asynchronous if A/S = logical "1"). A logical "0" P/S allows serial data to transfer into the register synchronously with the positive transition of the CLOCK, independent of the A/S input.

**CLOCK:** Single phase, enabled only in synchronous mode. (Either P/S = logical "1" and A/S = logical "0" or P/S = logical "0".

All register stages are D-type master-slave flip-flops with separate master and slave clock inputs generated internally to allow synchronous or asynchronous data transfer from master to slave.

All inputs are protected against damage due to static discharge by diode clamps to V<sub>DD</sub> and V<sub>SS</sub>.

### Features

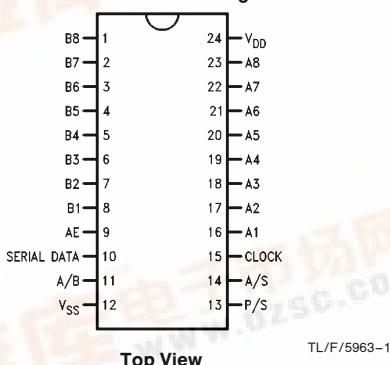

- Wide supply voltage range 3.0V to 18V
- High noise immunity 0.45 V<sub>DD</sub> (typ.)
- Low power TTL Fan out of 2 driving 74L compatibility or 1 driving 74LS
- RCA CD4034B second source

### Applications

- Parallel Input/Parallel Output
- Parallel Input/Serial Output
- Serial Input/Parallel Output
- Serial Input/Serial Output register
- Shift right/shift left register
- Shift right/shift left with parallel loading
- Address register
- Buffer register
- Bus system register with enable parallel lines at bus side
- Double bus register system
- Up-down Johnson or ring counter
- Pseudo-random code generators
- Sample and hold register (storage, counting, display)
- Frequency and phase comparator

### Connection Diagram

Dual-In-Line Package

## Absolute Maximum Ratings (Notes 1 & 2)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

DC Supply Voltage ( $V_{DD}$ )	$-0.5 \text{ V}_{DC}$ to $+18 \text{ V}_{DC}$
Input Voltage ( $V_{IN}$ )	$-0.5 \text{ V}_{DC}$ to $V_{DD} + 0.5 \text{ V}_{DC}$
Storage Temp. Range ( $T_S$ )	$-65^\circ\text{C}$ to $+150^\circ\text{C}$
Power Dissipation ( $P_D$ )	
Dual-In-Line	700 mW
Small Outline	500 mW
Lead Temperature ( $T_L$ ) (Soldering, 10 seconds)	260°C

## Recommended Operating Conditions (Note 2)

DC Supply Voltage ( $V_{DD}$ )	$+3 \text{ V}_{DC}$ to $+15 \text{ V}_{DC}$
Input Voltage ( $V_{IN}$ )	$0 \text{ V}_{DC}$ to $V_{DD} \text{ V}_{DC}$
Operating Temperature Range ( $T_A$ )	
CD4034BM	$-55^\circ\text{C}$ to $+125^\circ\text{C}$
CD4034BC	$-40^\circ\text{C}$ to $+85^\circ\text{C}$

## DC Electrical Characteristics CD4034BM (Note 2)

Symbol	Parameter	Conditions	$-55^\circ\text{C}$		$+25^\circ\text{C}$			$+125^\circ\text{C}$		Units

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2:  $V_{SS} = 0\text{V}$  unless otherwise specified.

Note 3:  $I_{OH}$  and  $I_{OL}$  are tested one output at a time.

Frequency and Phase Comparator

TL/F/5963-13

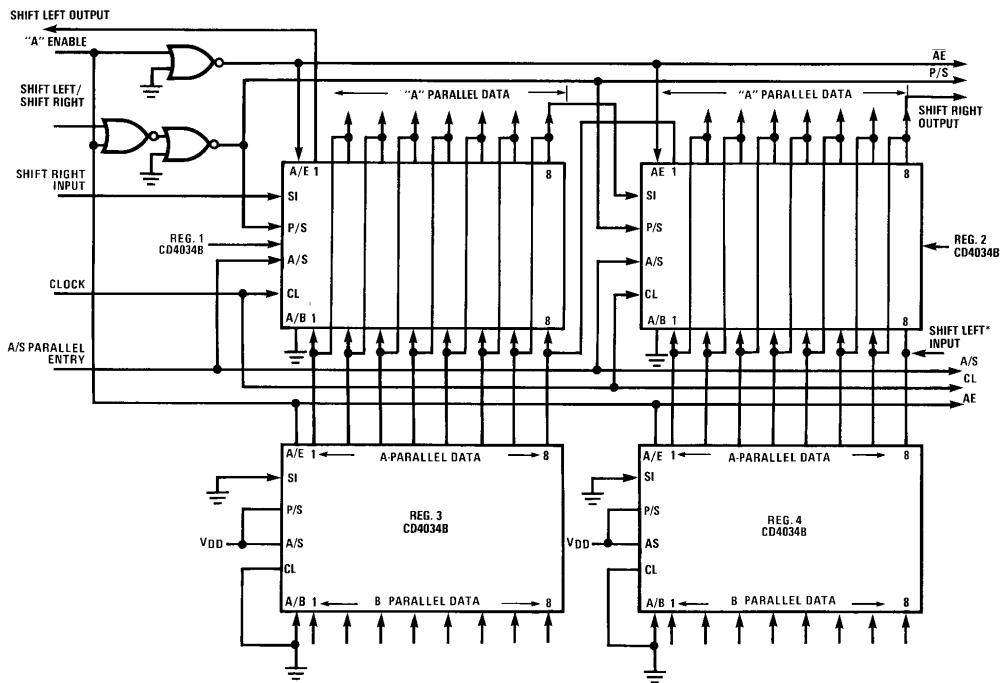

TL/F/5963-14

\*When  $f_1 = f_2$ ,  $t_W$  is proportional to the phase of  $f_1$  with respect to  $f_2$ .

## Applications (Continued)

### Shift Right/Shift Left with Parallel Inputs

TL/F/5963-15

Shift left input must be disabled during parallel entry.

A "High" ("Low") on the Shift Left/Shift Right input allows serial data on the Shift Left Input (Shift Right Input) to enter the register on the positive transition of the clock signal. A "high" on the "A" Enable Input disables the "A" parallel data lines on Registers 1 and 2 and enables the "A" data

lines on Registers 3 and 4 and allows parallel data into Registers 1 and 2. Other logic schemes may be used in place of registers 3 and 4 for parallel loading.

When parallel inputs are not used Registers 3 and 4 and associated logic are not required.

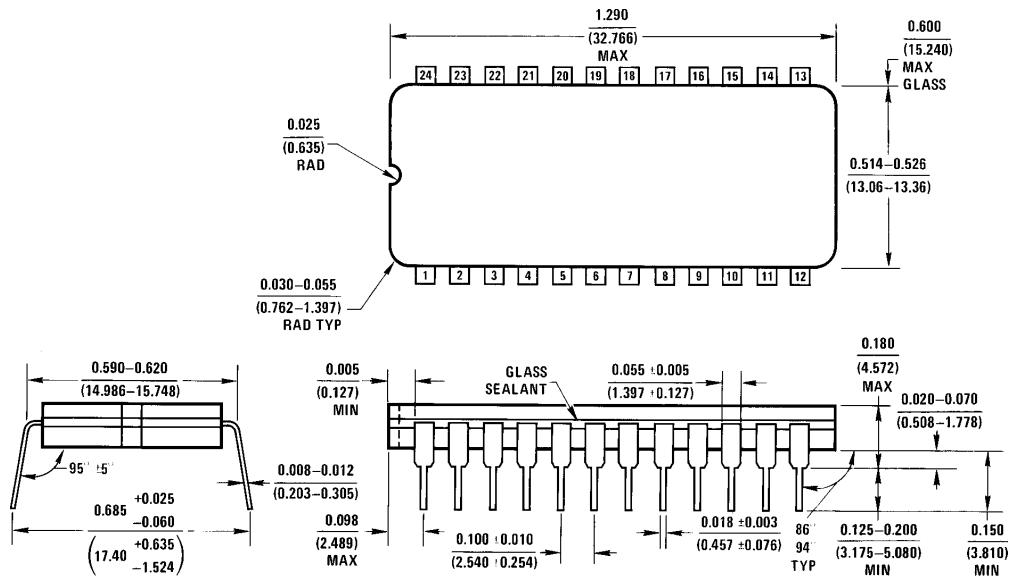

### Truth Table

<b>“A” Enable</b>	<b>P/S</b>	<b>A/B</b>	<b>A/S</b>	<b>Mode</b>	<b>Operation*</b>
0	0	0	X	Serial	Synchronous Serial data input, A- and B-Parallel data outputs disabled.
0	0	1	X	Serial	Synchronous Serial data input, B-Parallel data output.
0	1	0	0	Parallel	B Synchronous Parallel data inputs, A-Parallel data outputs disabled.
0	1	0	1	Parallel	B Asynchronous Parallel data inputs, A-Parallel data outputs disabled.
0	1	1	0	Parallel	A-Parallel data inputs disabled, B-Parallel data outputs, synchronous data recirculation.
0	1	1	1	Parallel	A-Parallel data inputs disabled, B-Parallel data outputs, asynchronous data recirculation.
1	0	0	X	Serial	Synchronous Serial data input, A-Parallel data output.
1	0	1	X	Serial	Synchronous Serial data input, B-Parallel data output.
1	1	0	0	Parallel	B Synchronous Parallel data input, A-Parallel data output.
1	1	0	1	Parallel	B Asynchronous Parallel data input, A-Parallel data output.
1	1	1	0	Parallel	A Synchronous Parallel data input, B-Parallel data output.
1	1	1	1	Parallel	A Asynchronous Parallel data input, B-Parallel data output.

X = Don't Care

\*For synchronous operation (serial mode or when A/S = 0 in parallel mode), outputs change state at positive transition of the clock.
