100353
Low Power 8-Bit Register

General Description

The 100353 contains eight D-type edge triggered, master/slave flip-flops with individual inputs (D_n), true outputs (Q_n), a clock input (CP), and a common clock enable pin ($\overline{CEN}$). Data enters the master when CP is LOW and transfers to the slave when CP goes HIGH. When the $\overline{CEN}$ input goes HIGH it overrides all other inputs, disables the clock, and the Q outputs maintain the last state.

The 100353 output drivers are designed to drive 50Ω termination to –2.0V. All inputs have 50 kΩ pull-down resistors.

Features

- Low power operation
- 2000V ESD protection
- Voltage compensated operating range = –4.2V to –5.7V
- Available to industrial grade temperature range

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2: ESD testing conforms to MIL-STD-883, Method 3015.

		−122		−61		V_{EE} = −4.2V to −5.7V	

Note 3: The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.
