

# Low-Noise, Precision, +2.5V/+4.096V/+5V Voltage References

## General Description

The MAX6225/MAX6241/MAX6250 are low-noise, precision voltage references with extremely low 1ppm/°C temperature coefficients and excellent  $\pm 0.02\%$  initial accuracy. These devices feature buried-zener technology for lowest noise performance. Load-regulation specifications are guaranteed for source and sink currents up to 15mA. Excellent line and load regulation and low output impedance at high frequency make them ideal for high-resolution data-conversion systems up to 16 bits.

The MAX6225 is set for 2.500V output, the MAX6241 is set for 4.096V output, and the MAX6250 is set for 5.000V output. All three provide for the option of external trimming and noise reduction.

## Applications

High-Resolution Analog-to-Digital  
and Digital-to-Analog Converters

High-Accuracy Reference Standard

High-Accuracy Industrial and Process Control

Digital Voltmeters

ATE Equipment

Precision Current Sources

## Features

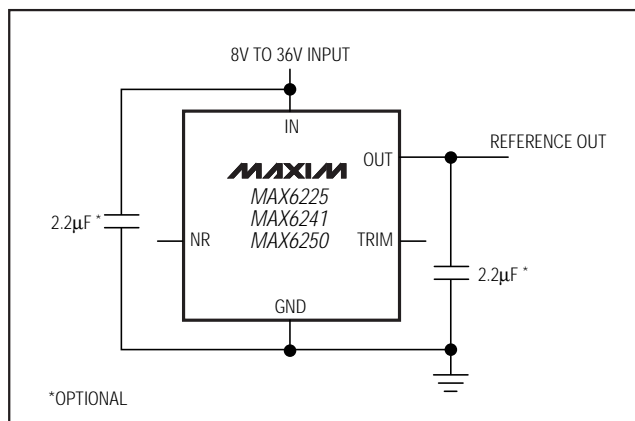

- ◆ Low 1.0ppm/°C Temperature Coefficient
- ◆ Very Low 1.5 $\mu$ Vp-p Noise (0.1Hz to 10Hz)
- ◆  $\pm 0.02\%$  Initial Accuracy
- ◆  $\pm 15$ mA Output Source and Sink Current
- ◆ Low, 18mW Power Consumption (MAX6225)
- ◆ Industry-Standard Pinout
- ◆ Optional Noise Reduction and Voltage Trim
- ◆ Excellent Transient Response
- ◆ 8-Pin SO Package Available
- ◆ Low 20ppm/1000h Long-Term Stability
- ◆ Stable for All Capacitive Loads

## Ordering Information

## Typical Operating Circuit

## Pin Configuration

# Low-Noise, Precision, +2.5V/+4.096V/+5V Voltage References

## ABSOLUTE MAXIMUM RATINGS

(Voltages Referenced to GND)

IN	-0.3V to +40V
OUT, TRIM	-0.3V to +12V
NR	-0.3V to +6V
OUT Short Circuit to GND Duration ( $V_{IN} \leq 12V$ )	Continuous
OUT Short Circuit to GND Duration ( $V_{IN} \leq 40V$ )	5sec
OUT Short Circuit to IN Duration ( $V_{IN} \leq 12V$ )	Continuous
Continuous Power Dissipation ( $T_A = +70^\circ C$ )	
Plastic DIP (derate 9.09mW/ $^\circ C$ above +70 $^\circ C$ )	727mW
SO (derate 5.88mW/ $^\circ C$ above +70 $^\circ C$ )	471mW
CERDIP (derate 8.00mW/ $^\circ C$ above +70 $^\circ C$ )	640mW

Operating Temperature Ranges

MAX62__C_A	0 $^\circ C$ to +70 $^\circ C$
MAX62__E_A	-40 $^\circ C$ to +85 $^\circ C$
MAX62__MJA	-55 $^\circ C$ to +125 $^\circ C$
Storage Temperature Range	-65 $^\circ C$ to +150 $^\circ C$
Lead Temperature (soldering, 10sec)	+300 $^\circ C$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS—MAX6225

( $V_{IN} = 10V$ ,  $I_{OUT} = 0mA$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$ , unless otherwise noted. Typical values are at  $T_A = +25^\circ C$ .)

Temperature Hysteresis		(Note 4)	+25°C		20		ppm
Long-Term Stability	$\Delta V_{OUT} / t$		+25°C		20		ppm/1000h

**Note 1:** Temperature coefficient is measured by the box method; i.e., the maximum  $\Delta V_{OUT}$  is divided by  $\Delta T \times V_{OUT}$ .

**Note 2:** Line regulation ( $\Delta V_{OUT} / (V_{OUT} \times \Delta V_{IN})$ ) and load regulation ( $\Delta V_{OUT} / (V_{OUT} \times \Delta I_{OUT})$ ) are measured with pulses and do not include output voltage changes due to die-temperature changes.

**Note 3:** Noise specifications are 100% tested for the 10Hz to 1kHz bandwidth. Contact factory for 100% noise testing in the 0.1Hz to 10Hz bandwidth.

**Note 4:** Temperature hysteresis is specified at  $T_A = +25^\circ C$  by measuring  $V_{OUT}$  before and after changing temperature by  $+25^\circ C$  using the PDIP package.

MAX6225/MAX6241/MAX6250

## Pin Description

PIN	NAME	FUNCTION
1, 7, 8	I.C.	Internally Connected. <b>Do not use.</b>
2	IN	Positive Power-Supply Input
3	NR	Noise Reduction. Optional capacitor connection for wideband noise reduction. Leave open if not used (Figure 2).
4	GND	Ground
5	TRIM	External Trim Input. Allows $\pm 1\%$ output adjustment (Figure 1). Leave open if not used.
6	OUT	Voltage Reference Output

## Detailed Description

### Temperature Stability

The MAX6225/MAX6241/MAX6250 are highly stable, low-noise voltage references that use a low-power temperature-compensation scheme to achieve laboratory-standard temperature stability. This produces a nearly flat temperature curve, yet does not require the power associated with heated references.

The output voltage can be trimmed a minimum of 0.6% by connecting a 10k $\Omega$  potentiometer between OUT and GND, and connecting its tap to the TRIM pin, as shown in Figure 1. The external trimming does not affect temperature stability.

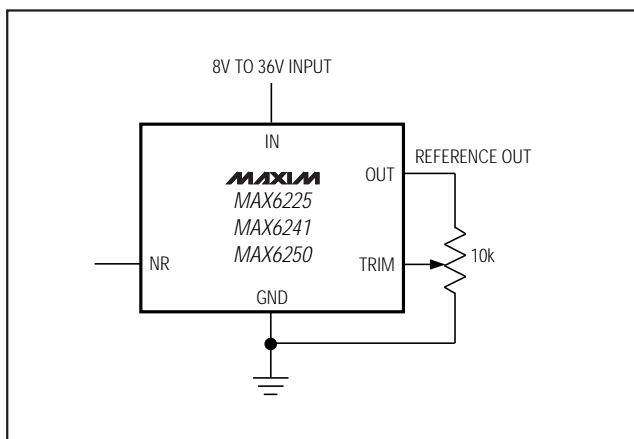

Figure 1. Output Voltage Adjustment

### Noise Reduction

To augment wideband noise reduction, add a 1 $\mu$ F capacitor to the NR pin (Figure 2). Larger values do not improve noise appreciably (see *Typical Operating Characteristics*).

Noise in the power-supply input can affect output noise, but can be reduced by adding an optional bypass capacitor to the IN pin and GND.

### Bypassing

The MAX6225/MAX6241/MAX6250 are stable with capacitive load values from 0 $\mu$ F to 100 $\mu$ F, for all values of load current. Adding an output bypass capacitor can help reduce noise and output glitching caused by load transients.

## Applications Information

### Negative Regulator

Figure 3 shows how both a +5V and -5V precision reference can be obtained from a single unregulated +5V supply. A MAX681 generates approximately  $\pm 9$ V to operate the MAX6250 reference and MAX432 inverting amplifier. The +5V is inverted by the MAX432 chopper-stabilized amplifier. Resistor R1 is optional, and may be used to trim the  $\pm 5$ V references. R2 and R4 should be matched, both in absolute resistance and temperature coefficient. R3 is optional, and is adjusted to set the -5V reference.
