

# Low Current, High Performance NPN Silicon Bipolar Transistor

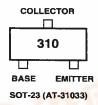

# Technical Data

## Features

- High Performance Bipolar Transistor Optimized for Low Current, Low Voltage Operation
- 900 MHz Performance:
   AT-31011: 0.9 dB NF, 13 dB G<sub>A</sub>
   AT-31033: 0.9 dB NF, 11 dB G<sub>A</sub>
- Characterized for End-Of-Life Battery Use (2.7 V)
- SOT-143 SMT Plastic Package
- Tape-And-Reel Packaging Option Available<sup>[1]</sup>

### **Outline Drawing**

#### Note:

 Refer to "Tape-and-Reel Packaging for Semiconductor Devices"

## **Description**

Hewlett-Packard's AT-31011 and AT-31033 are high performance NPN bipolar transistors that have been optimized for operation at low voltages, making them ideal for use in battery powered applications in wireless markets. The AT-31033 uses the 3 lead SOT-23, while the AT-31011 places the same die in the higher performance 4 lead SOT-143. Both packages are industry standards compatible with high volume surface mount assembly techniques.

The 3.2 micron emitter-to-emitter pitch and reduced parasitic design of these transistors yields extremely high performance products that can perform a multiplicity of tasks. The 10 emitter finger interdigitated geometry yields an extremely fast transistor with low operating currents and reasonable impedances.

Optimized performance at 2.7 V makes these devices ideal for use in 900 MHz, 1.9 GHz, and 2.4 GHz

AT-31011 AT-31033

battery operated systems as an LNA, gain stage, buffer, oscillator, or active mixer. Applications include cellular and PCS handsets as well as Industrial-Scientific-Medical systems. Typical amplifier designs at 900 MHz yield 1.3 dB noise figures with 11 dB or more associated gain at a 2.7 V, 1 mA bias. Moderate output power capability (+9 dBm P<sub>1dB</sub>) coupled with an excellent noise figure yields high dynamic range for a microcurrent device. High gain capability at 1 V, 1 mA makes these devices a good fit for 900 MHz pager applications.

The AT-3 series bipolar transistors are fabricated using an optimized version of Hewlett-Packard's 10 GHz f<sub>T</sub>, 30 GHz f<sub>max</sub> Self-Aligned-Transistor (SAT) process. The die are nitride passivated for surface protection. Excellent device uniformity, performance and reliability are produced by the use of ion-implantation, self-alignment techniques, and gold metalization in the fabrication of these devices.

### AT-31011, AT-31033 Absolute Maximum Ratings
