The PMB 2330 is a low power, monolithic, double balanced mixer similar to S 042 P and TBB 042 G for frequencies up to 2 GHz.

Circuit Description

The pins RF (7) and $\overline{\text{RF}}$ (8) are low resistance inputs of the base coupled difference stage.

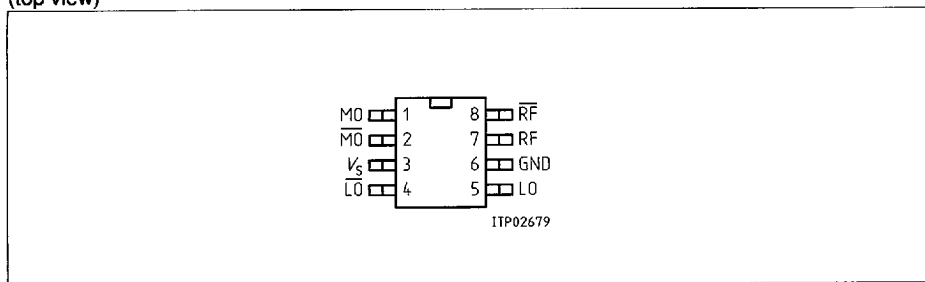

The resistor of at least 200 Ω may be connected between pins 7 and 6 (ground) and between 8 and 6 to increase the currents (max. 4 mA per pin) and thus the conversion transductance.

The pins $\overline{\text{LO}}$ (4) and LO (5) are the local oscillator inputs of the mixer.

The connections to the mixer inputs may be symmetrical or asymmetrical coupled, capacitive or inductive coupled.

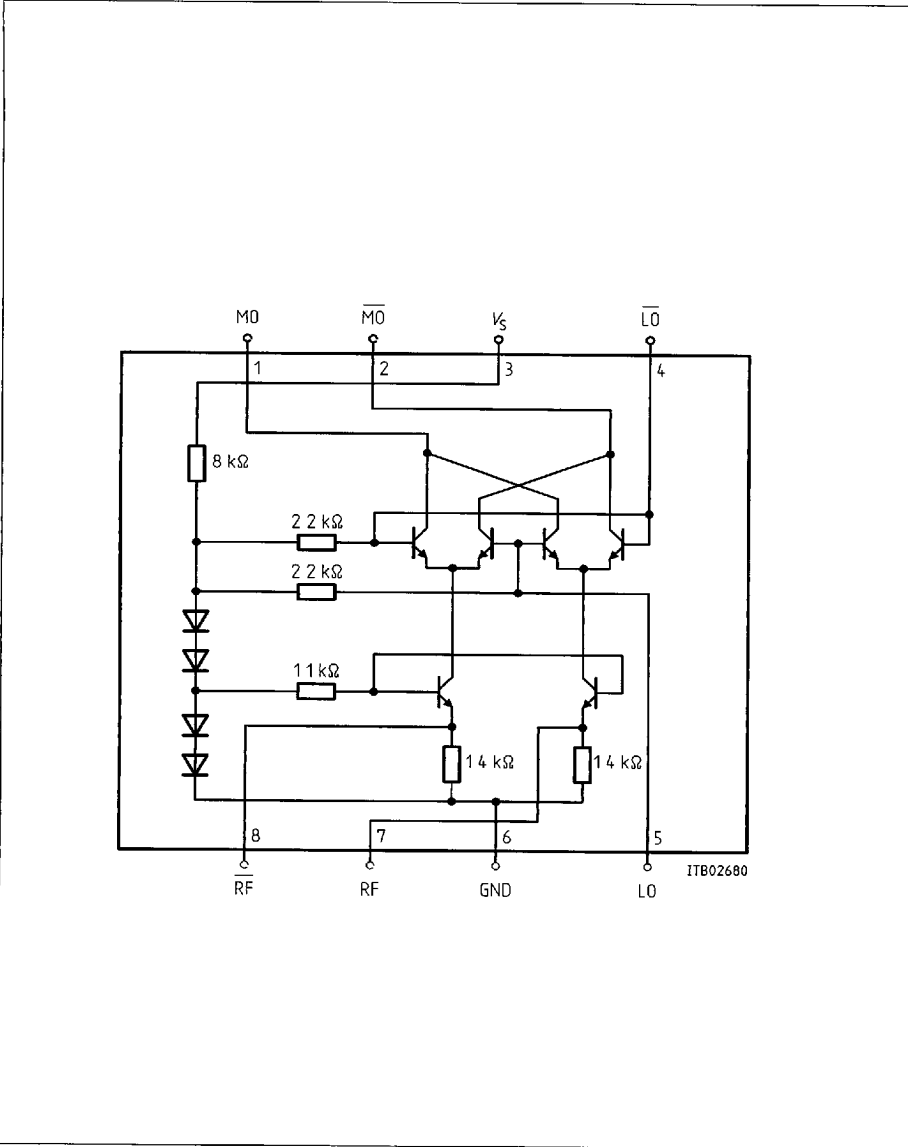

The mixer outputs MO (1) and $\overline{\text{MO}}$ (2) are high impedance open-collector outputs for frequencies up to 2 GHz.
