

## Features

- DSP Functions for CCD/CMOS Image Processing
- Video Encoder Including Line Driver for NTSC/PAL TV Signal
- Baseline JPEG Compression/Decompression
- SDRAM Interface
- Support for all Flash Card Interfaces (Atmel DataFlash®, MMC, SD, SSFDC, CompactFlash)
- USB and USART Interfaces for PC Camera Applications
- 32 Pins for General-purpose I/O
- Five External Interrupts, Timer Clock Input and Wakeup Pin
- DACs for Camera Control Functions and Audio Output
- ADC Channels for Monitoring Camera Analog Inputs, Audio Input and Switch Input, Like Window Comparator
- Serial Interface for Controlling Camera Components
- Hardware Up to 2M Bytes Program Space
- Support for RTOS
- All Low-level Software, Application Samples are Provided
- Built-in Outputs Include a CVBS Output with a Line Driver, YC16-bit Digital Output, RGB 565 Digital Output, Digital Composite Output
- Compatible with Various Types of Display Devices
- SDRAM Support from 16M Bits to 256M Bits
- Direct Interface to Epson LCDs
- 280-pin FlexBGA Package
- 1.8-volt Core and 3.3V I/O Operation

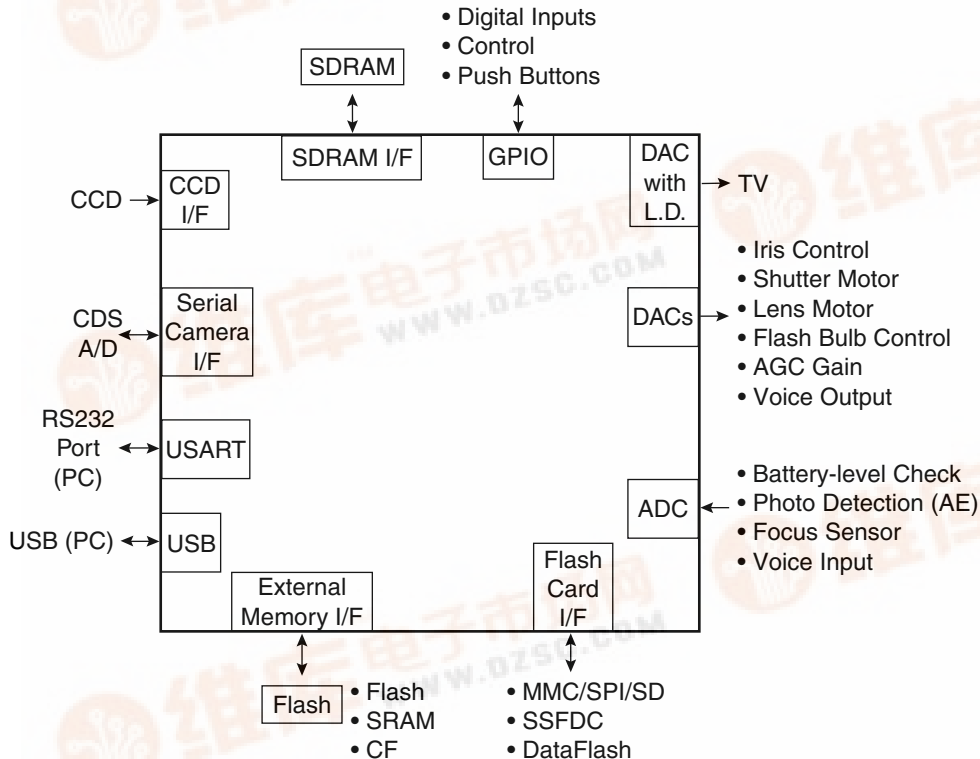

## High-Performance Digital Camera Processor

### AT76C111

## Summary

Figure 1. Typical DSC Application Using AT76C111

## Description

The AT76C111 is a highly-integrated solution for digital cameras. It combines a number of functions that are required in digital cameras.

- Image data acquisition and capturing from either CCD or CMOS imagers
- Image display
- Image processing and image storing
- Overall camera management
- Control of general-purpose I/O functions
- Data communication
- Control of user functions
- On-screen Display

It also provides a large number of interfaces that allow camera manufacturers to directly access a variety of devices that may be present in a digital camera.

- Communication with PCs
- Communication with Flash cards
- Serial communication ports for controlling other devices in the camera

The design is based on an ARM<sup>®</sup> microprocessor that controls the entire chip. A number of hardware resources, controlled by ARM, perform digital camera functions such as image DSP processing, JPEG coding/decoding, DMA access to SDRAM and Video encoding. All these computational-intensive functions are implemented in hardware which can be programmed according to user specifications, thus allowing ARM to be free for other user-defined functions.

## Capabilities

- Supports up to 16 megapixel CCDs/CMOS (10 - 30 MHz CCDs)
- CCD colors are limited to the Bayer arrangements of the RGB primary colors
- Interfaces to 16 - 256-Mbit SDRAM, one or two pieces
- 30 frames/sec Video Display mode (NTSC)
- 15 frames/sec Capture mode (VGA resolution)
- Up to 1.5M bytes/sec read/write from/to Flash cards
- 2M Bytes external Flash ROM for program space
- 2M Bytes external SRAM for program/working space (optional)
- Full-speed USB interface (mass storage and image class)
- 60 - 100 mA current
- 1 - 5 mA in Standby mode
- 50  $\mu$ A current in Sleep mode

## Atmel Headquarters

**Corporate Headquarters**  
2325 Orchard Parkway  
San Jose, CA 95131  
TEL 1(408) 441-0311  
FAX 1(408) 487-2600

### Europe

Atmel Sarl  
Route des Arsenaux 41  
Case Postale 80  
CH-1705 Fribourg  
Switzerland  
TEL (41) 26-426-5555  
FAX (41) 26-426-5500

### Asia

Room 1219  
Chinachem Golden Plaza  
77 Mody Road Tsimshatsui  
East Kowloon  
Hong Kong  
TEL (852) 2721-9778  
FAX (852) 2722-1369

### Japan

9F, Tonetsu Shinkawa Bldg.  
1-24-8 Shinkawa  
Chuo-ku, Tokyo 104-0033  
Japan
