General Description
The Fairchild Switch FSTD3125 provides four high－speed
CMOS TTL－compatible bus switches．The low On Resis－
tance of the switch allows inputs to be connected to out－
puts without adding propagation delay or generating
additional ground bounce noise．A diode to $\mathrm{V}_{\mathrm{CC}}$ has been
integrated into the circuit to allow for level shifting between
5V inputs and 3.3 V outputs．
The device is organized as four 1－bit switches with sepa－
rate OE inputs．When OE is LOW，the switch is ON and
Port A is connected to Port B．When $\overline{\mathrm{OE}}$ is HIGH，the
switch is OPEN and a high－impedance state exists
between the two ports．

## Features

－ $4 \Omega$ switch connection between two ports
－Minimal propagation delay through the switch
－Low $I_{\text {CC }}$
－Zero bounce in flow－through mode
■ Control inputs compatible with TTL level
－TruTranslation ${ }^{\mathrm{TM}}$ voltage translation from 5．0V inputs to 3．3V outputs

|  |  | Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation. |
|  |  | Note 2: The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed. |
|  |  | Note 3: Unused control inputs must be held HIGH or LOW. They may not float. |

## 14-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide

 Package Number MTC14
## Technology Description

The Fairchild Switch family derives from and embodies Fairchild's proven switch technology used for several years in its 74LVX3L384 (FST3384) bus switch product.

Fairchild does not assume any responsibility for use of any circuitry described, no circuit patent licenses are implied and Fairchild reserves the right at any time without notice to change said circuitry and specifications.
LIFE SUPPORT POLICY
FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
