LOW POWER PRESCALERS****UPB553AC****DESCRIPTION**

The UPB553AC is a VHF two-modulus prescaler intended for use in measurement instrumentation and PLL Digital Tuning Systems in conjunction with UPD1700 series. Advanced bipolar process technology is utilized to realize high frequency operation with extremely low power consumptions. The device provides +16 and +17 division ratio for NEC's original pulse swallowing method, and is guaranteed to operate up to 130 MHz over the -35°C to +75°C temperature range with a VCC variation from +4.5 to +5.5 V. An included amplifier allows it to be operated with a small amplitude signal of 150 mVp-p.

**FEATURES**

- High frequency operation: 150 MHz ( $\div 16$ )  
130 MHz ( $\div 17$ )
- NEC's original pulse swallowing operation:  $\div 16/\div 17$
- Small input amplitude:  $V_{in} = 150 \text{ mVp-p (MIN.)}$
- Single supply voltage:  $V_{CC} = 5.0 \text{ V} \pm 10 \%$
- Low supply current:  $I_{CC} = 8.9 \text{ mA (TYP.)}$
- Incorporated buffer amplifier:  $V_O = 1.2 \text{ Vp-p (TYP.)}$
- Small package: 8 pin plastic dual in-line package (DIP)
