

# MOS INTEGRATED CIRCUIT

## $\mu$ PD5205

### C-MOS ANALOG MULTIPLEXER

#### DESCRIPTION

The  $\mu$ PD5205 is 8-channel C-MOS analog multiplexer. A single-pole 8-position mode and double-pole 4-position mode are settable by 8/4 terminal. TTL/C-MOS compatible input threshold (EN,  $\overline{CS}$ ,  $\overline{WR}$ , RS) make the circuit directly driven by microprocessor. Further advantage each switch has low ON resistance, low leak current and wide analog input range. By these features, the  $\mu$ PD5205 is the optimum choice for data acquisition system.

#### TYPICAL CHARACTERISTICS

- Wide Supply Voltage: 4.4 V
- Low ON Resistance:  $270 \Omega$  TYP. ( $T_a = 25^\circ\text{C}$ )
- Low Source OFF Leak Current: 5 nA MAX. ( $T_a = 25^\circ\text{C}$ )
- Low Drain ON/OFF Leak Current: 20 nA MAX. ( $T_a = 25^\circ\text{C}$ )
- Guaranteed Break-Before-Make Operation

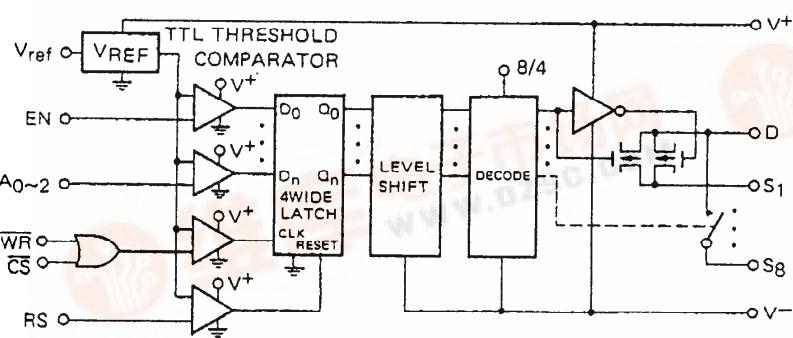

#### FEATURES

- A single-pole 8 position mode and double-pole 4 position mode are settable.
- TTL/C-MOS compatible digital input level. (EN,  $\overline{CS}$ ,  $\overline{WR}$ , RS)
- Analog input voltage range includes  $V^+$  and  $V^-$ .

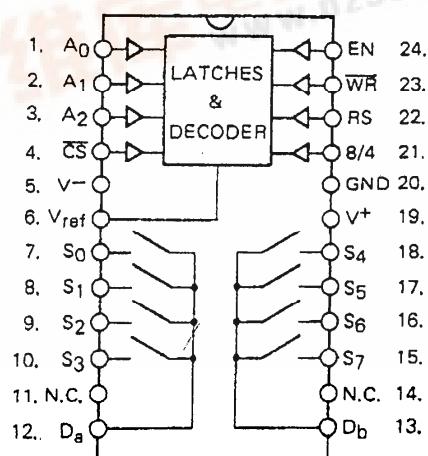

#### ORDERING INFORMATION

| Part Number    | Package                            |
|----------------|------------------------------------|
| $\mu$ PD5205CA | 24PIN PLASTIC SHRINK DIP (300 mil) |
| $\mu$ PD5205G  | 24PIN PLASTIC SOP (300 mil)        |

#### EQUIVALENT CIRCUIT

Notes:

1. Please connect V<sup>-</sup>pin to the minimum voltage level and have a care that V<sup>-</sup>will not go to open or not go to higher than GND pin.
2. Please connect N.C. pin (11, 14 pin) to GND in order to improve Off Isolation.
3.  $\mu$ PD5205G has large chip size. Therefore we recommend hot plate belt conveyer type reflow soldering for mounting. Wave soldering or infrared rays type reflow soldering methods are not recommendable because of their hard heat shock.

\* Don't Care

After reset, all switches remain off until chip select signal becomes active.

TYPICAL CHARACTERISTICS ( $T_a = 25^\circ\text{C}$ )

## AC CHARACTERISTICS

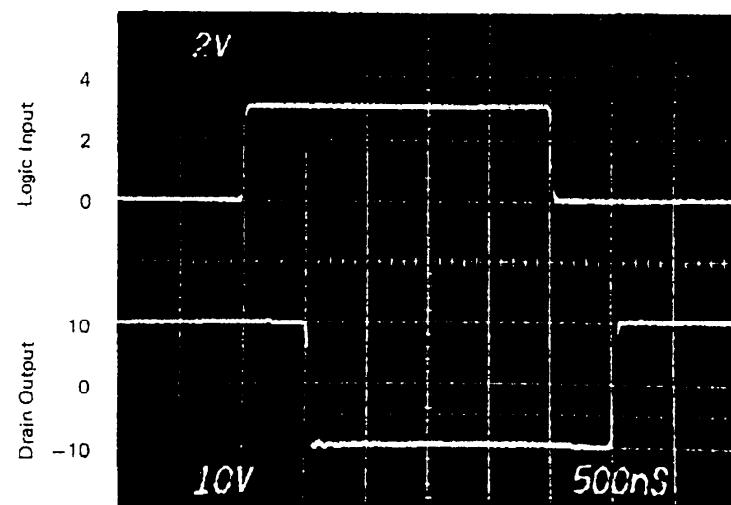

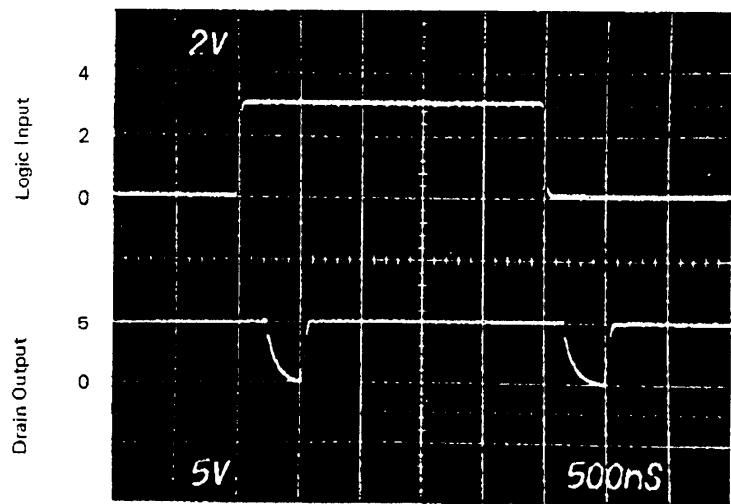

Photo. 1 Switching Time of Multiplexer ( $V_{ANALOG} = \pm 10 V$ )Photo. 2 Brake Before Make Interval ( $V_{ANALOG} = 5 V$ )

Photo. 3 Switch ON/OFF Time of EN ( $V_{ANALOG} = -5$  V)

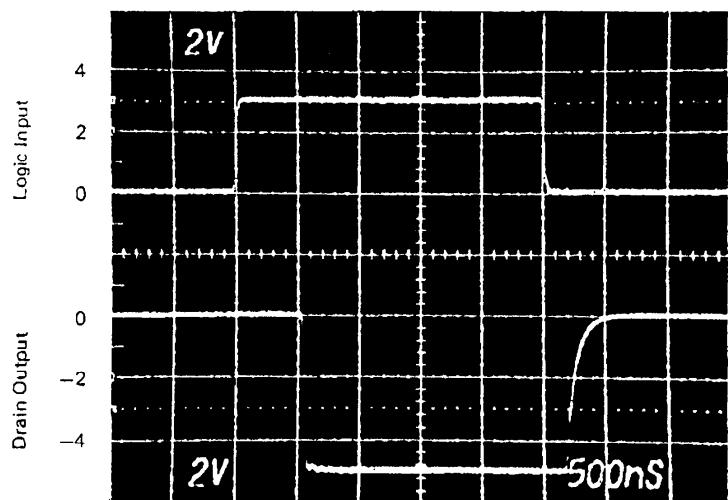

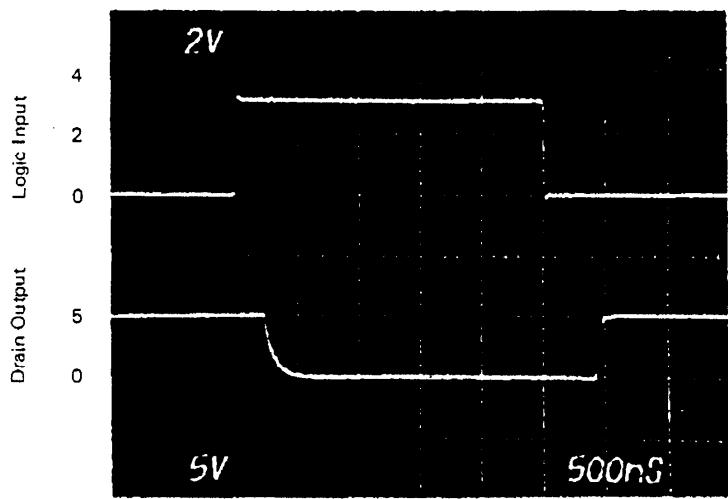

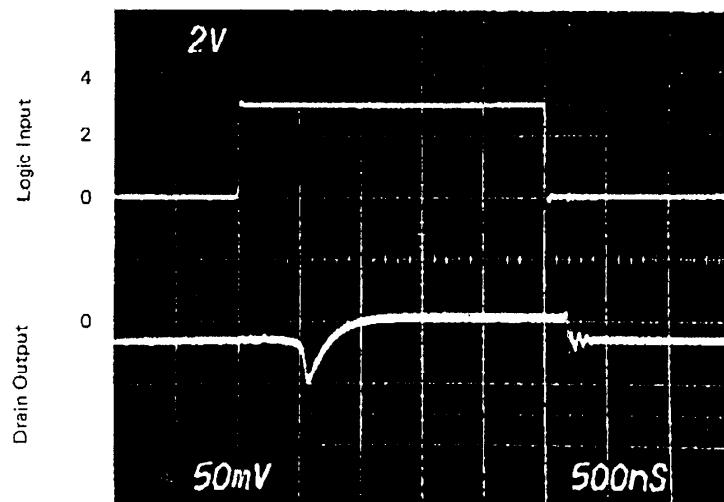

Photo. 4 Switch OFF Time of RS ( $V_{ANALOG} = 5$  V)

Photo. 5 Charge Injection

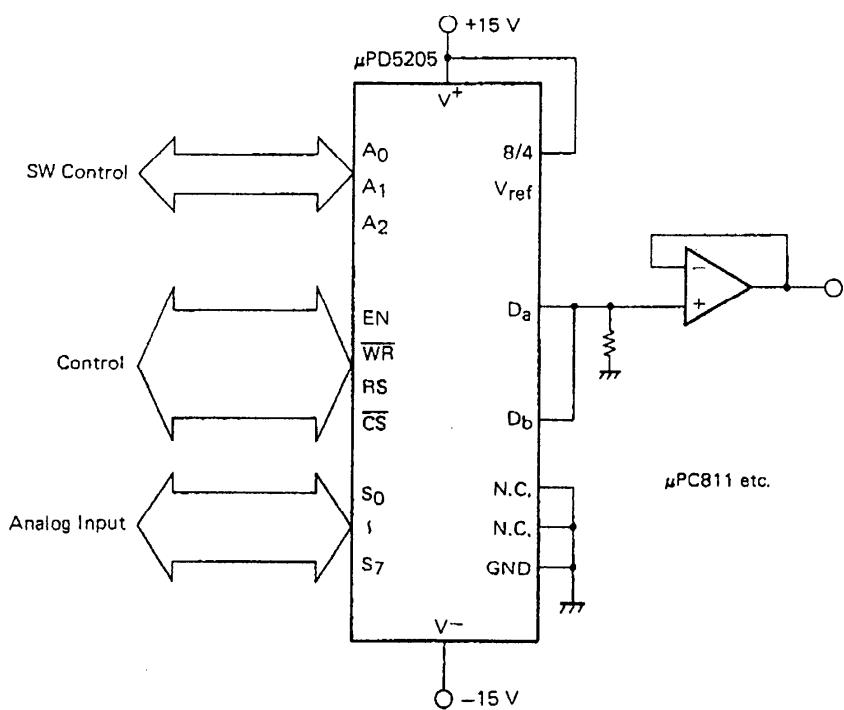

## APPLICATION CIRCUIT

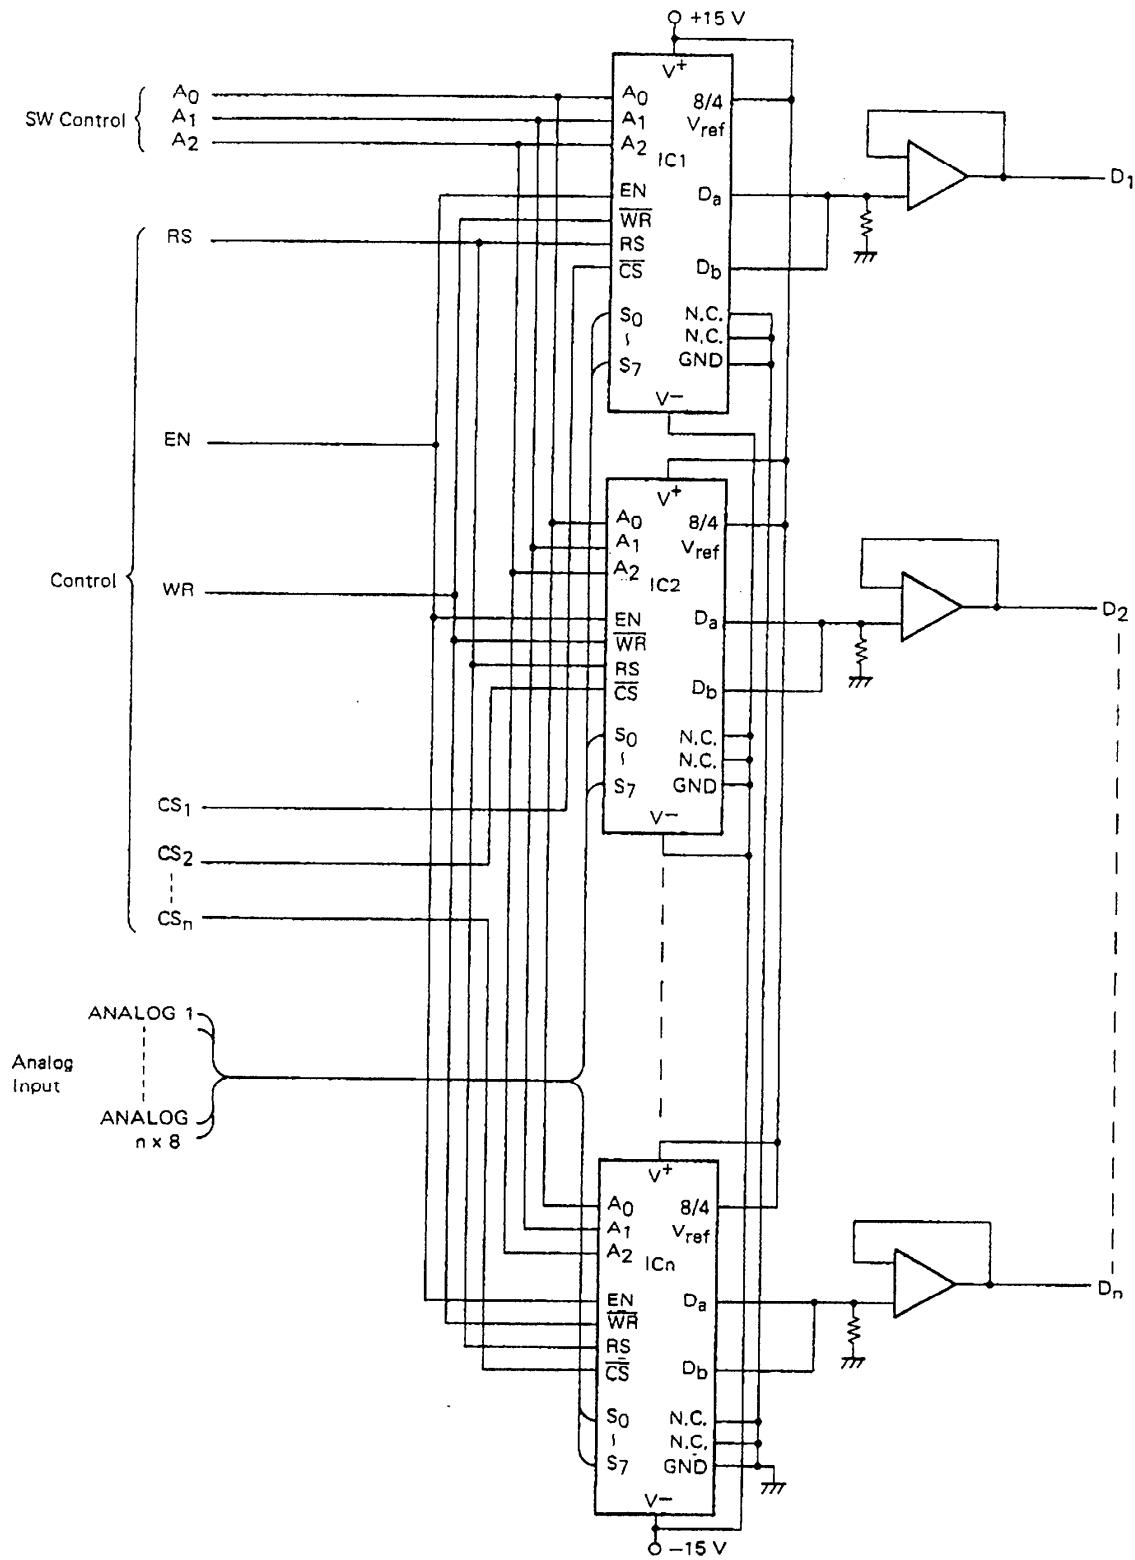

## (1) Double-pole 4position mode

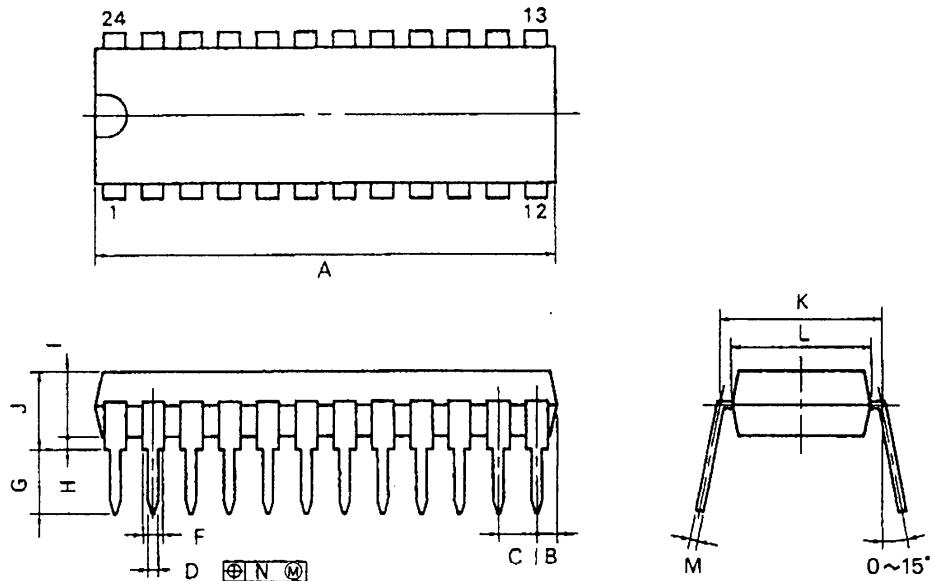

## (2) Single-pole 8position mode

## (3) Multi Connection

## 24PIN PLASTIC SHRINK DIP (300 mil)

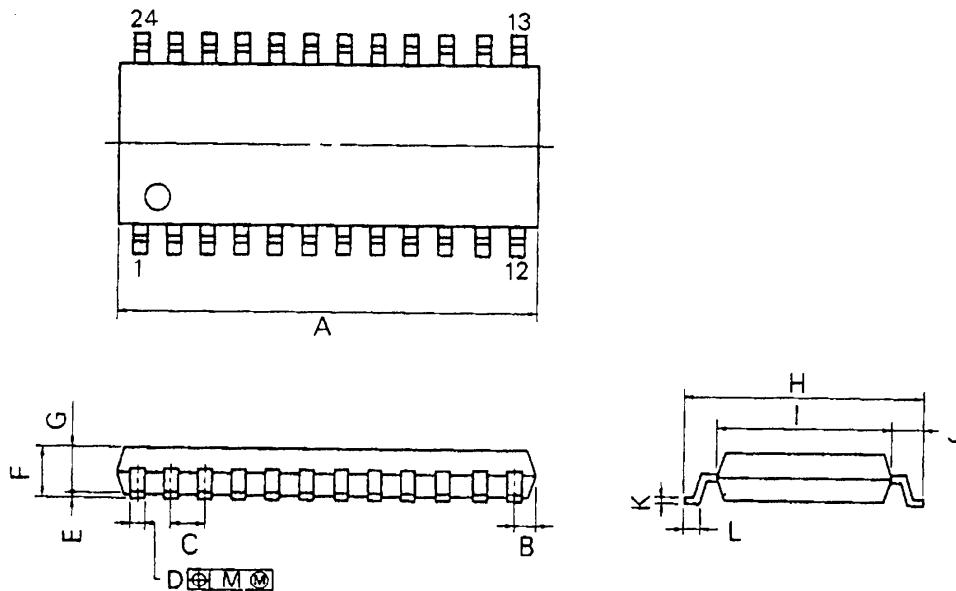

S24C-70-3008

## NOTES

- 1) Each lead centerline is located within 0.17 mm (0.007 inch) of its true position (T.P.) at maximum material condition.
- 2) Item "K" to center of leads when formed parallel.

| ITEM | MILLIMETERS            | INCHES                    |
