

USB3311

Hi-Speed USB Transceiver with 1.8V ULPI Interface - 26MHz Reference Clock

PRODUCT FEATURES

Data Brief

- USB-IF “Hi-Speed” compliant to the Universal Serial Bus Specification Rev 2.0
- Interface compliant with the ULPI Specification revision 1.1 as a Single Data Rate (SDR) PHY
- 1.8V IO Voltage (+/- 10%)
- SMSC flexPWR™ Technology
 - Low current design ideal for battery powered applications
 - “Sleep” mode tri-states all ULPI pins and places the part in a low current state
- Supports FS pre-amble for FS hubs with a LS device attached (UTMI+ Level 3)
- Supports HS SOF and LS keep-alive pulse
- Includes full support for the optional On-The-Go (OTG) protocol detailed in the On-The-Go Supplement Revision 1.0a specification
- Supports the OTG Host Negotiation Protocol (HNP) and Session Request Protocol (SRP)
- Allows host to turn VBUS off to conserve battery power in OTG applications
- Support OTG monitoring of VBUS levels with internal comparators
- “Wrapper-less” design for optimal timing performance and design ease
 - Low Latency Hi-Speed Receiver (43 Hi-Speed clocks Max) allows use of legacy UTMI Links with a ULPI bridge
- Internal 5V cable short-circuit protection of ID, DP and DM lines to VBUS or ground
- 26MHz Reference Clock operation
 - 0 to 3.6V input drive tolerant
 - Able to accept “noisy” clock sources
- Internal low jitter PLL for 480MHz Hi-Speed USB operation
- Internal detection of the value of resistance to ground on the ID pin
- Integrated battery to 3.3V LDO regulator
 - 2.2uF bypass capacitor
 - 100mV dropout voltage
- Integrated ESD protection circuits
 - Up to +/-15kV without any external devices
- Carkit UART mode for non-USB serial data transfers
- Integrated USB Switch
 - Allows single USB port of connection
 - High speed data
 - Battery charging
 - Stereo and mono/mic audio
 - USB1.1 data
- Industrial Operating Temperature -40°C to +85°C
- Packaging Options
 - 24 pin QFN lead-free RoHS compliant package (4 x 4 x 0.90 mm height)
 - 25 ball VFBGA lead-free RoHS compliant package also available; (3 x 3 x 0.88mm height)

Applications

The USB3311 is targeted for any application where a Hi-Speed USB connection is desired and when board space, power, and interface pins must be minimized.

The USB3311 is well suited for:

- Cell Phones
- PDAs
- MP3 Players
- GPS Personal Navigation
- Scanners
- External Hard Drives
- Digital Still and Video Cameras
- Portable Media Players
- Entertainment Devices
- Printers
- Set Top Boxes
- Video Record/Playback Systems
- IP and Video Phones
- Gaming Consoles
- POS Terminals

ORDER NUMBER(S):

USB3311-CP-TR for 24 pin, QFN Lead-Free RoHS Compliant Package (tape and reel)
USB3311-GJ-TR for 25 pin, VFBGA Lead-Free RoHS Compliant Package (tape and reel)
Reel size is 4000 pieces.

80 ARKAY DRIVE, HAUPPAUGE, NY 11788 (631) 435-6000, FAX (631) 273-3123

General Description

The USB3311 is a highly integrated Hi-Speed USB2.0 Transceiver (PHY) that supports systems architectures based on a 26MHz reference clock. It is designed to be used in both commercial and industrial temperature applications.

The USB3311 meets all of the electrical requirements to be used as a Hi-Speed USB Host, Device, or an On-the-Go (OTG) device. In addition to the supporting USB signaling the USB3311 also provides USB UART mode and USB Audio mode.

USB3311 uses the industry standard UTMI+ Low Pin Interface (ULPI) to connect the USB PHY to the Link. The industry standard ULPI interface uses a method of in-band signaling and status byte transfers between the Link and PHY, to facilitate a USB session. By using in-band signaling and status byte transfers the ULPI interface requires only 12 pins.

The USB3311 uses SMSC's "wrapper-less" technology to implement the ULPI interface. This "wrapper-less" technology allows the PHY to achieve a low latency transmit and receive time. SMSC's low latency transceiver allows an existing UTMI Link to be reused by adding a UTMI to ULPI bridge. By adding a bridge to the ASIC the existing and proven UTMI Link IP can be reused.

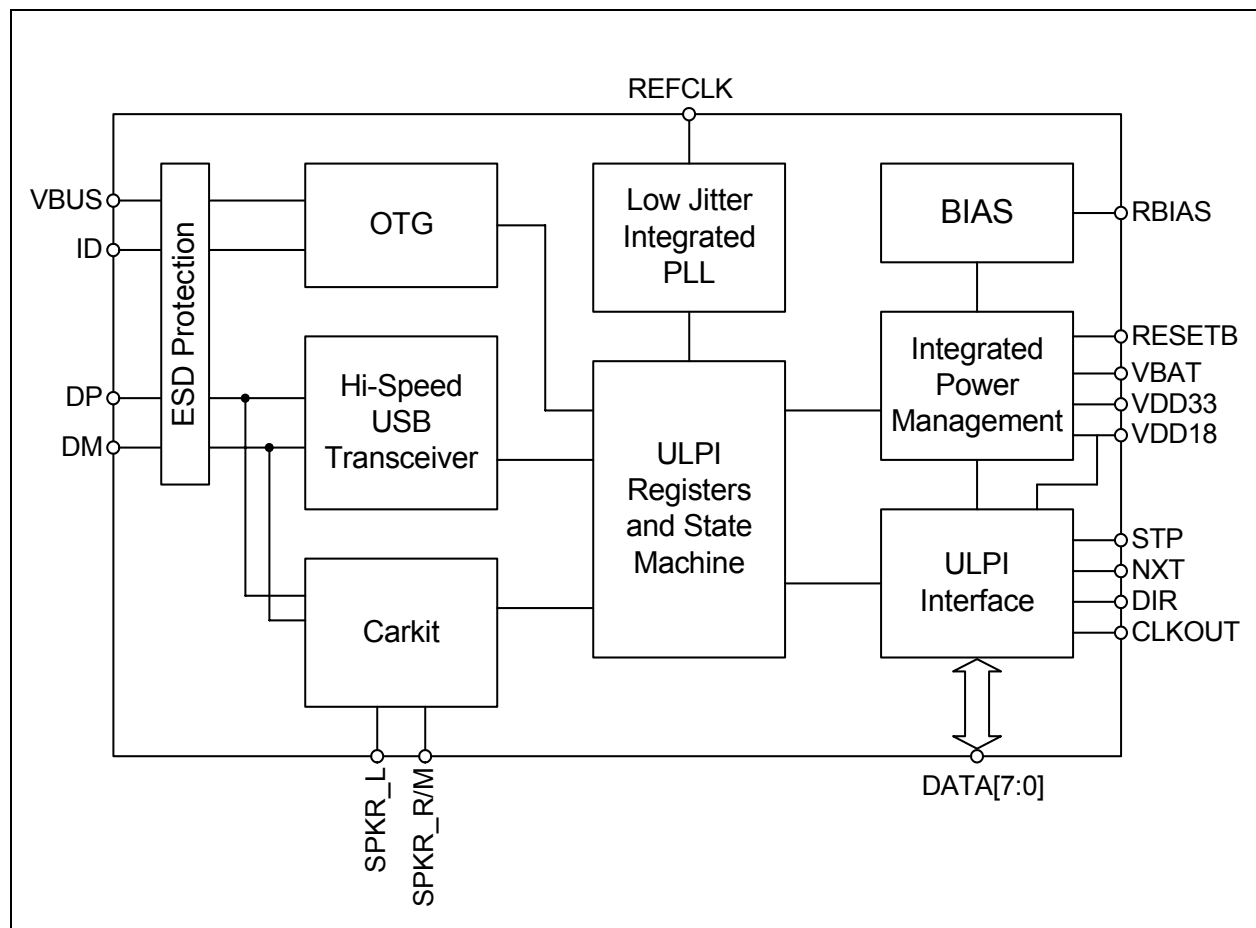

Figure 1 USB3311 Block Diagram

The USB3311 is designed to run with a 26MHz reference clock. By using a reference clock from the Link the USB3311 is able to remove the cost of a crystal reference from the design.

The USB3311 includes an integrated 3.3V LDO regulator to generate its own supply from the **VBAT** pin. The **VBAT** pin can range from 3.1 to 5.5V. The regulator dropout voltage is less than 100mV which allows the PHY to continue USB signaling when the voltage on **VBAT** drops to 3.1V. The USB transceiver will continue to operate at lower voltages, although some parameters may be outside the limits of the USB specifications. If the user would like to provide a 3.3V supply to the USB3311 the **VBAT** and **VDD3.3** pins should be connected together.

The USB3311 also includes integrated pull-up resistors that can be used for detecting the attachment of a USB Charger. By sensing the attachment to a USB Charger a product using the USB3311 can charge its battery at more than the 500mA allowed when charging from a USB Host.

The USB3311 also includes support for USB audio modes. The user can program the PHY into UART or audio mode while in synchronous mode. The USB3311 can only enter these modes when the user programs the part into these modes.

In USB UART mode, the USB3311 **DP** and **DM** outputs will be redefined to transmit on **DM** and to receive on **DP**. In UART mode the USB3311 can function as a bi-directional transceiver.

In USB audio mode the **DP** pin is shorted to the **SPKR_R/M** pin with a switch. The **DM** pin is shorted to the **SPKR_L** pin. The user can then initiate audio signaling over the USB cable. In addition to audio signals, the switches can also be used to connect Full Speed USB from another PHY onto the USB cable.

USB3311 Pin Locations and Descriptions

Package Diagram with Pin Locations

The pinout below is viewed from the top of the package.

Pin Definitions

The following table details the pin definitions for the figure above.

Table 1 USB3311 Pin Description

| PIN/ BALL | NAME | DIRECTION/ TYPE | ACTIVE LEVEL | DESCRIPTION |
|-----------------------|-------------|--------------------|-----------------|---|
| 1 B1 | ID | Input, Analog | N/A | ID pin of the USB cable. For non-OTG applications this pin can be floated. For an A-Device ID is grounded. For a B-Device ID is floated. |
| 2 C1 | VBUS | I/O, Analog | N/A | VBUS pin of the USB cable. This pin is used for the Vbus comparator inputs and for Vbus pulsing during session request protocol. |
| 3 C2 | VBAT | Power | N/A | Regulator input. The regulator supply can be from 5.5V to 3.1V. |

Table 1 USB3311 Pin Description (continued)

| PIN/ BALL | NAME | DIRECTION/ TYPE | ACTIVE LEVEL | DESCRIPTION |
|--------------|----------|--------------------|-----------------|---|
| 4 D2 | VDD3.3 | Power | N/A | 3.3V Regulator Output. A 2.2uF (<1 ohm ESR) bypass capacitor to ground is required for regulator stability. The bypass capacitor should be placed as close as possible to the USB3311. |
| 5 D1 | DM | I/O, Analog | N/A | D- pin of the USB cable. |
| 6 E1 | DP | I/O, Analog | N/A | D+ pin of the USB cable. |
| 7 E2 | SPKR_R/M | I/O, Analog | N/A | USB switch in/out for DP signals |
| 8 E3 | SPKR_L | I/O, Analog | N/A | USB switch in/out for DM signals |
| 9 D3 | DATA[7] | I/O, CMOS | N/A | ULPI bi-directional data bus. DATA[7] is the MSB. |
| 10 E4 | DATA[6] | I/O, CMOS | N/A | ULPI bi-directional data bus. |
| 11 D4 | DATA[5] | I/O, CMOS | N/A | ULPI bi-directional data bus. |
| 12 E5 | DATA[4] | I/O, CMOS | N/A | ULPI bi-directional data bus. |
| 13 D5 | CLKOUT | Output, CMOS | N/A | 60MHz reference clock output. All ULPI signals are driven synchronous to the rising edge of this clock. |
| 14 C4 | DATA[3] | I/O, CMOS | N/A | ULPI bi-directional data bus. |
| 15 C5 | DATA[2] | I/O, CMOS | N/A | ULPI bi-directional data bus. |
| 16 B4 | DATA[1] | I/O, CMOS | N/A | ULPI bi-directional data bus. |
| 17 B5 | DATA[0] | I/O, CMOS | N/A | ULPI bi-directional data bus. DATA[0] is the LSB. |
| 18 A5 | NXT | Output, CMOS | High | The PHY asserts NXT to throttle the data. When the Link is sending data to the PHY, NXT indicates when the current byte has been accepted by the PHY. The Link places the next byte on the data bus in the following clock cycle. |
| 19 A4 | DIR | Output, CMOS | N/A | Controls the direction of the data bus. When the PHY has data to transfer to the Link, it drives DIR high to take ownership of the bus. When the PHY has no data to transfer it drives DIR low and monitors the bus for commands from the Link. |

Table 1 USB3311 Pin Description (continued)

| PIN/ BALL | NAME | DIRECTION/ TYPE | ACTIVE LEVEL | DESCRIPTION |
|--------------|--------|--------------------|-----------------|--|
| 20 A3 | STP | Input, CMOS | High | The Link asserts STP for one clock cycle to stop the data stream currently on the bus. If the Link is sending data to the PHY, STP indicates the last byte of data was on the bus in the previous cycle. |
| 21 B3 | VDD1.8 | Power | N/A | External 1.8V Supply input pin. This pad needs to be bypassed with a 0.1uF capacitor to ground, placed as close as possible to the USB3311. |
| 22 B2 | RESETB | Input, CMOS, | Low | When low, the part is suspended with all of the I/O tri-stated. When high the USB3311 will operate as a normal ULPI device. |
| 23 A2 | REFCLK | Input, CMOS | N/A | 26MHz Reference Clock input. |
| 24 A1 | RBIAS | Analog, CMOS | N/A | Bias Resistor pin. This pin requires an 8.06k Ω (\pm 1%) resistor to ground, placed as close as possible to the USB3311. |
| FLAG C3 | GND | Ground | N/A | Ground. <u>QFN only:</u> The flag should be connected to the ground plane with a via array under the exposed flag. This is the main ground for the IC. |
