

VNQ860-E VNQ860SP-E

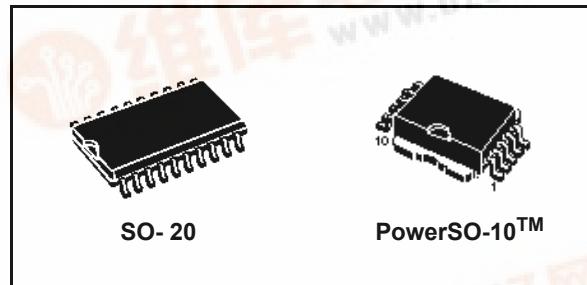

Quad channel high side driver

Features

Type	$R_{DS(on)}^{(1)}$	I_{out}	V_{CC}
VNQ860-E	270 mΩ	0.25 A	36 V
VNQ860SP-E			

1. Per each channel.

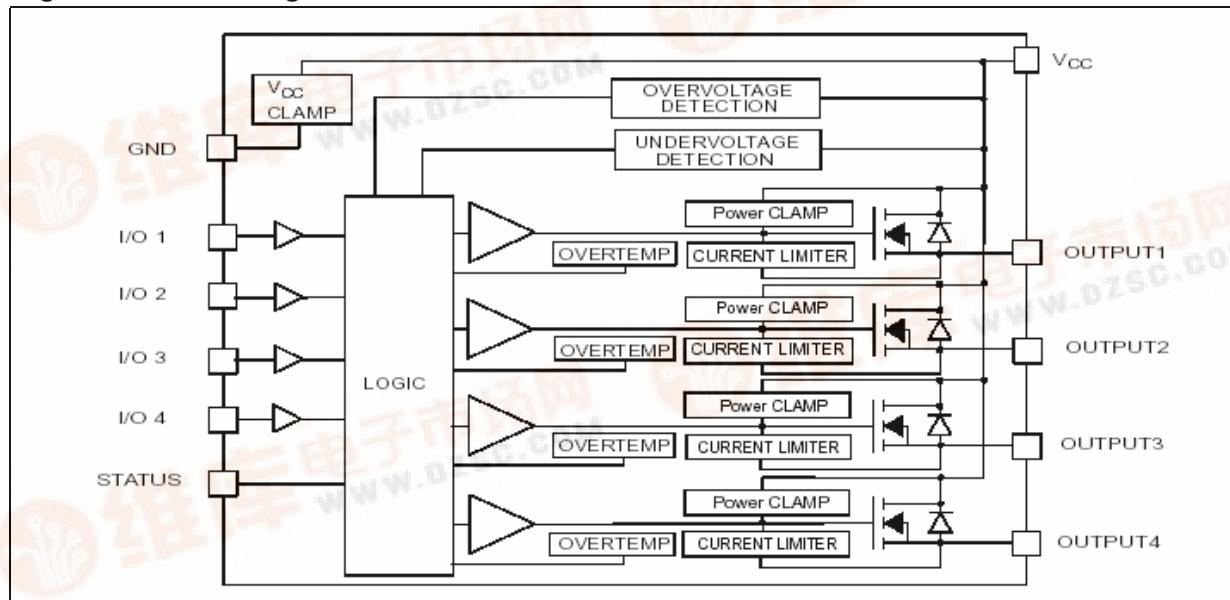

- CMOS compatible I/Os
- Undervoltage and overvoltage shut-down
- Shorted load protection
- Thermal shut-down
- Very low stand-by current
- Protection against loss of ground

Description

The VNQ860-E, VNQ860SP-E are monolithic devices made using STMicroelectronics VIPower M0-3 technology, intended for driving any kind of load with one side connected to ground. Active current limitation combined with thermal shut-down and automatic restart protect the device against overload. Device automatically turns OFF in case of ground pin disconnection. This device is especially suitable for industrial applications in norms conformity with IEC 61131, (Programmable controllers international standard).

1 Maximum rating

Table 1. Absolute maximum rating

Symbol	Parameter	Value		Unit
		SO-20	PowerSO-10	
V_{CC}	DC supply voltage	41		V
$-V_{CC}$	Reverse DC supply voltage	-0.3		V
$-I_{GND}$	DC reverse ground pin	-200		mA
I_{OUT}	DC output current	Internally limited		A
$-I_{OUT}$	Reverse DC output current	-2		A
I_{IN}	DC input current	± 10		mA
V_{IN}	Input voltage range	$-3/+V_{CC}$		V
I_{STAT}	DC status voltage	$+V_{CC}$		V
V_{ESD}	Electrostatic discharge (R = 1.5 kW; C = 100 pF)	2000		V
P_{tot}	Power dissipation at $T_c \leq 25^\circ\text{C}$	16	90	W
T_J	Junction operating temperature	Internally limited		$^\circ\text{C}$
T_c	Case operating temperature	-40 to 150		$^\circ\text{C}$
T_{stg}	Storage temperature	-55 to 150		$^\circ\text{C}$

Table 2. Thermal data

Symbol	Parameter	Value		Unit
		SO-20	PowerSO-10	
R_{thJP}	Thermal resistance junction-pins	Max	8	$^\circ\text{C}/\text{W}$
R_{thJA}	Thermal resistance junction-ambient	Max	58	$^\circ\text{C}/\text{W}$
			52 ⁽¹⁾	
R_{thJC}	Thermal resistance junction-case	Max	37 ⁽²⁾	
			-	
			1.4	$^\circ\text{C}/\text{W}$

- When mounted on FR4 printed circuit board with 0.5 cm^2 of copper area (at least 35μ thick) connected to all V_{CC} pins.
- When mounted on FR4 printed circuit board with 6 cm^2 of copper area (at least 35μ thick) connected to all V_{CC} pins.

8 Reverse polarity protection

A schematic solution to protect the IC against a reverse polarity condition is proposed.

This schematic is effective with any type of load connected to the outputs of the IC.

The RGND resistor value can be selected according to the following conditions to be met:

1. $R_{GND} \leq 600 \text{ mV} / (I_S \text{ in ON state max})$.
2. $R_{GND} \geq (-V_{CC}) / (-I_{GND})$

where $-I_{GND}$ is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

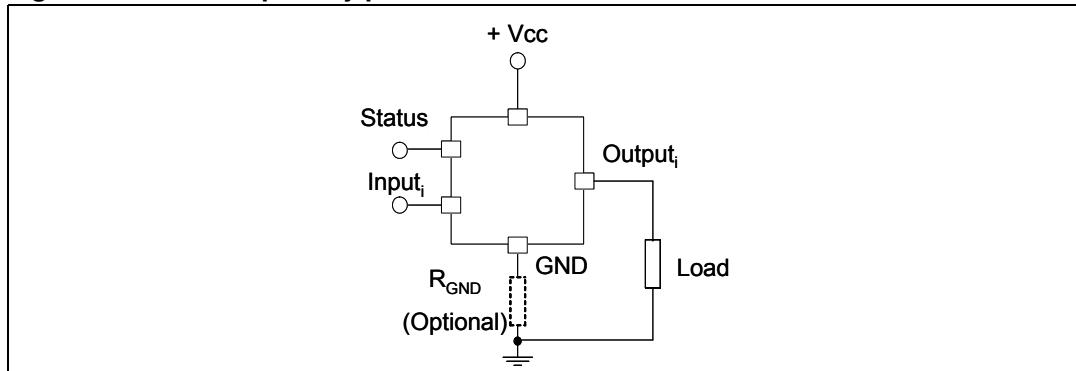

The power dissipation associated to R_{GND} during reverse polarity condition is:

$$PD = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared by several different ICs. In such case I_S value on formula (1) is the sum of the maximum ON-state currents of the different devices.

Please note that if the microprocessor ground and the device ground are separated then the voltage drop across the R_{GND} (given by I_S in ON state max * R_{GND}) produce a difference between the generated input level and the IC input signal level. This voltage drop will vary depending on how many devices are ON in the case of several high side switches sharing the same R_{GND} .

Figure 9. Reverse polarity protection

9 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a lead-free second level interconnect. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
