

VN5012AK-E

Single channel high side driver with analog current sense
for automotive applications

Features

Max supply voltage	V _{CC}	41V
Operating voltage range	V _{CC}	4.5 to 36V
Max On-State resistance (per ch.)	R _{ON}	12 mΩ
Current limitation (typ)	I _{LIMH}	65 A
Off state supply current (typ)	I _S	2 µA ⁽¹⁾

1. Typical value with all loads connected

- General features
 - Inrush current active management by power limitation
 - Very low stand-by current
 - 3.0V CMOS compatible input
 - Optimized electromagnetic emission
 - Very low electromagnetic susceptibility
 - In compliance with the 2002/95/EC european directive
- Diagnostic functions
 - Proportional load current sense
 - High current sense precision for wide range currents
 - Current sense disable
 - Thermal shutdown indication
 - Very low current sense leakage
- Protections
 - Undervoltage shut-down
 - Overvoltage clamp
 - Load current limitation
 - Self limiting of fast thermal transients
 - Protection against loss of ground and loss of V_{CC}
 - Thermal shut down
 - Reverse battery protection (see *Figure 26*)

Table 1. Device summary

Package	Order codes	
	Tube	Tape & Reel
PowerSSO-24	VN5012AK-E	VN5012AKTR-E

- Electrostatic discharge protection

Application

- All types of resistive, inductive and capacitive loads

Description

The VN5012AK-E is a monolithic device made using STMicroelectronics VIPower M0-5 technology. It is intended for driving resistive or inductive loads with one side connected to ground. Active V_{CC} pin voltage clamp protects the device against low energy spikes (see ISO7637 transient compatibility table). This device integrates an analog current sense which delivers a current proportional to the load current (according to a known ratio) when CS_DIS is driven low or left open. When CS_DIS is driven high, the CURRENT SENSE pin is in a high impedance condition. Output current limitation protects the device in overload condition. In case of long overload duration, the device limits the dissipated power to safe level up to thermal shutdown intervention. Thermal shut-down with automatic restart allows the device to recover normal operation as soon as fault condition disappears.

Figure 3. Current and voltage conventions

Note: $V_F = V_{OUT} - V_{CC}$ during reverse battery condition.

2.1 Absolute maximum ratings

Stressing the device above the rating listed in the “Absolute maximum ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to the conditions in table below for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality document.

Table 4. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{CC}	DC supply voltage	41	V
$-V_{CC}$	Reverse DC supply voltage	0.3	V
$-I_{GND}$	DC reverse ground pin current	200	mA
I_{OUT}	DC output current	Internally limited	A
$-I_{OUT}$	Reverse DC output current	-30	A
I_{IN}	DC input current	-1 to 10	mA
I_{CSD}	DC current sense disable input current	-1 to 10	mA
$-I_{CSSENSE}$	DC reverse CS pin current	200	mA
$V_{CSSENSE}$	Current Sense maximum voltage	$V_{CC}-41$ $+V_{CC}$	V V

Table 4. Absolute maximum ratings (continued)

Symbol	Parameter	Value	Unit
E_{MAX}	Maximum switching energy ($L=1.25\text{ mH}$; $R_L=0\Omega$ $V_{bat}=13.5\text{V}$; $T_{jstart}=150^\circ\text{C}$;	508	mJ
V_{ESD}	Electrostatic discharge (Human Body Model: $R=1.5\text{K}\Omega$; $C=100\text{pF}$)	4000 2000	V V
V_{ESD}	Charge device model (CDM-AEC-Q100-011)	750	V
T_j	Junction operating temperature	-40 to 150	$^\circ\text{C}$
T_{stg}	Storage temperature	-55 to 150	$^\circ\text{C}$

2.2 Thermal data

Table 5. Thermal data

Symbol	Parameter	Max value	Unit
$R_{thj-case}$	Thermal resistance junction-case (MAX) (With one channel On)	0.4	$^\circ\text{C/W}$
$R_{thj-amb}$	Thermal resistance junction-ambient (Max.)	See Figure 29	$^\circ\text{C/W}$

2.3 Electrical characteristics

$8V < V_{CC} < 36V$; $-40^{\circ}C < T_j < 150^{\circ}C$, unless otherwise specified.

T_R	Reset temperature		$T_{RS} + 1$	$T_{RS} + 5$		°C
T_{RS}	Thermal reset of STATUS		135			°C
T_{HYST}	Thermal hysteresis ($T_{TSD}-T_R$)			7		°C
V_{DEMAG}	Turn-off output voltage clamp	$I_{OUT}=2A$; $V_{IN}=0$; $L=6mH$	$V_{CC}-41$	$V_{CC}-46$	$V_{CC}-52$	V
V_{ON}	Output voltage drop limitation	$I_{OUT}=0.5A$; $T_j = -40^{\circ}C \dots +150^{\circ}C$ (see Figure 9)		25		mV

- To ensure long term reliability under heavy overload or short circuit conditions, protection and related diagnostic signals must be used together with a proper software strategy. If the device is subjected to abnormal conditions, this software must limit the duration and number of activation cycles.

3 Application information

Figure 26. Application schematic

3.1 GND Protection network against reverse battery

3.1.1 Solution 1: resistor in the ground line (R_{GND} only)

This can be used with any type of load.

The following is an indication on how to dimension the R_{GND} resistor.

1. $R_{GND} \leq 600\text{mV} / (I_{S(on)\max})$.
2. $R_{GND} \geq (-V_{CC}) / (-I_{GND})$

where $-I_{GND}$ is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

Power Dissipation in R_{GND} (when $V_{CC}<0$: during reverse battery situations) is:

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared amongst several different HSDs. Please note that the value of this resistor should be calculated with formula (1) where $I_{S(on)\max}$ becomes the sum of the maximum on-state currents of the different devices.

Please note that if the microprocessor ground is not shared by the device ground then the R_{GND} will produce a shift ($I_{S(on)\max} * R_{GND}$) in the input thresholds and the status output values. This shift will vary depending on how many devices are ON in the case of several high side drivers sharing the same R_{GND} .

If the calculated power dissipation leads to a large resistor or several devices have to share the same resistor then ST suggests to utilize Solution 2 (see below).

3.1.2 Solution 2: a diode (D_{GND}) in the ground line

A resistor ($R_{GND}=1\text{k}\Omega$) should be inserted in parallel to D_{GND} if the device drives an inductive load.

This small signal diode can be safely shared amongst several different HSDs. Also in this case, the presence of the ground network will produce a shift ($\approx 600\text{mV}$) in the input threshold and in the status output values if the microprocessor ground is not common to the device ground. This shift will not vary if more than one HSD shares the same diode/resistor network.

3.2 Load dump protection

D_{ld} is necessary (Voltage Transient Suppressor) if the load dump peak voltage exceeds the V_{CC} max DC rating. The same applies if the device is subject to transients on the V_{CC} line that are greater than the ones shown in the ISO 7637-2: 2004(E) table.

3.3 MCU I/Os protection

If a ground protection network is used and negative transient are present on the V_{CC} line, the control pins will be pulled negative. ST suggests to insert a resistor (R_{prot}) in line to prevent the μC I/Os pins to latch-up.

The value of these resistors is a compromise between the leakage current of μC and the current required by the HSD I/Os (input levels compatibility) with the latch-up limit of μC I/Os.

$$-V_{CCpeak}/I_{latchup} \leq R_{prot} \leq (V_{O_{H\mu C}} - V_{IH} - V_{GND}) / I_{IHmax}$$

Calculation example:

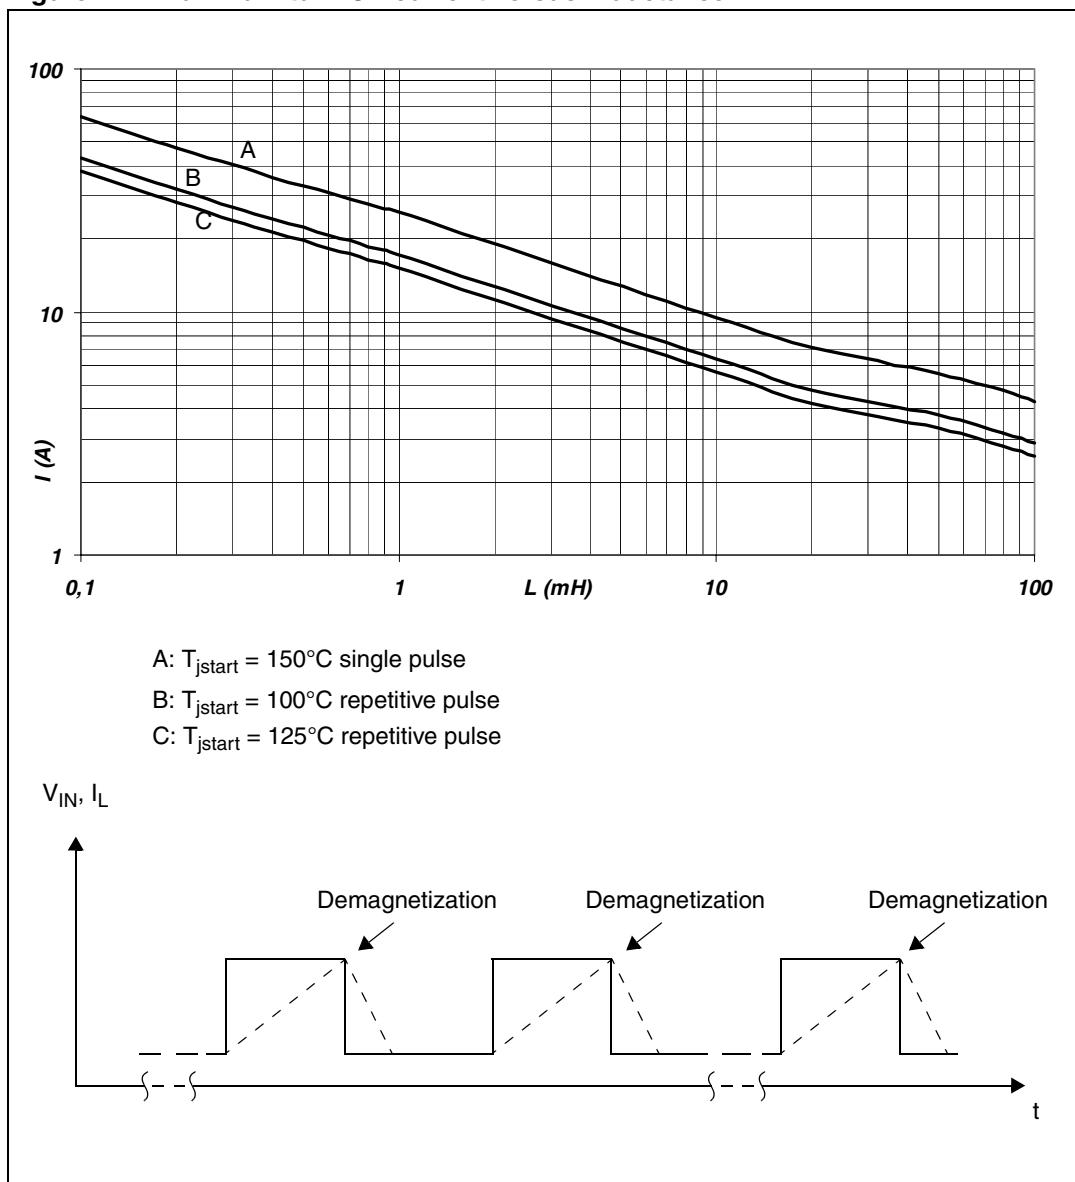

For $V_{CCpeak} = -100\text{V}$ and $I_{latchup} \geq 20\text{mA}$; $V_{O_{H\mu C}} \geq 4.5\text{V}$

$$5\text{k}\Omega \leq R_{prot} \leq 180\text{k}\Omega$$

Recommended values: $R_{prot} = 10\text{k}\Omega$, $C_{EXT} = 10\text{nF}$.

3.4 Maximum demagnetization energy ($V_{CC} = 13.5V$)

Figure 27. Maximum turn Off current versus inductance

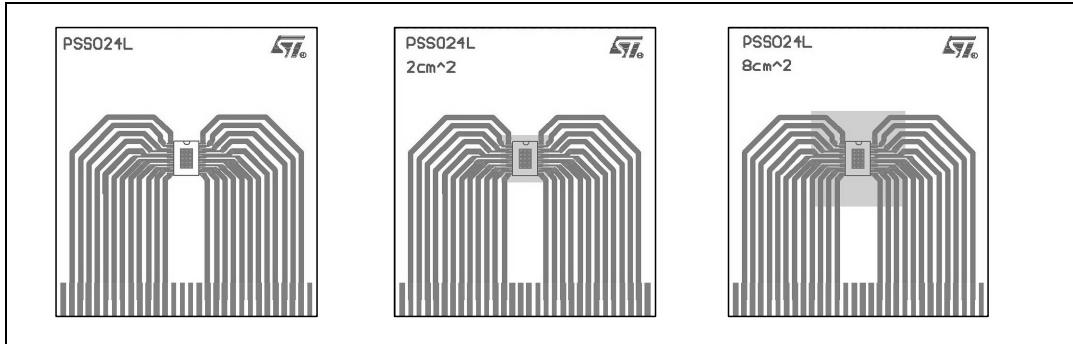

Note:

Values are generated with $R_L = 0 \Omega$. In case of repetitive pulses, T_{jstart} (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves A and B.

4 Package and PCB thermal data

4.1 PowerSSO-24 thermal data

Figure 28. PowerSSO-24 PC board

Note: Layout condition of R_{th} and Z_{th} measurements (PCB: Double layer, Thermal Vias, FR4 area= 77mm x 86mm, PCB thickness=1.6mm, Cu thickness=70 μm (front and back side), Copper areas: from minimum pad lay-out to 8cm 2).

Figure 29. $R_{thj-amb}$ Vs. PCB copper area in open box free air condition

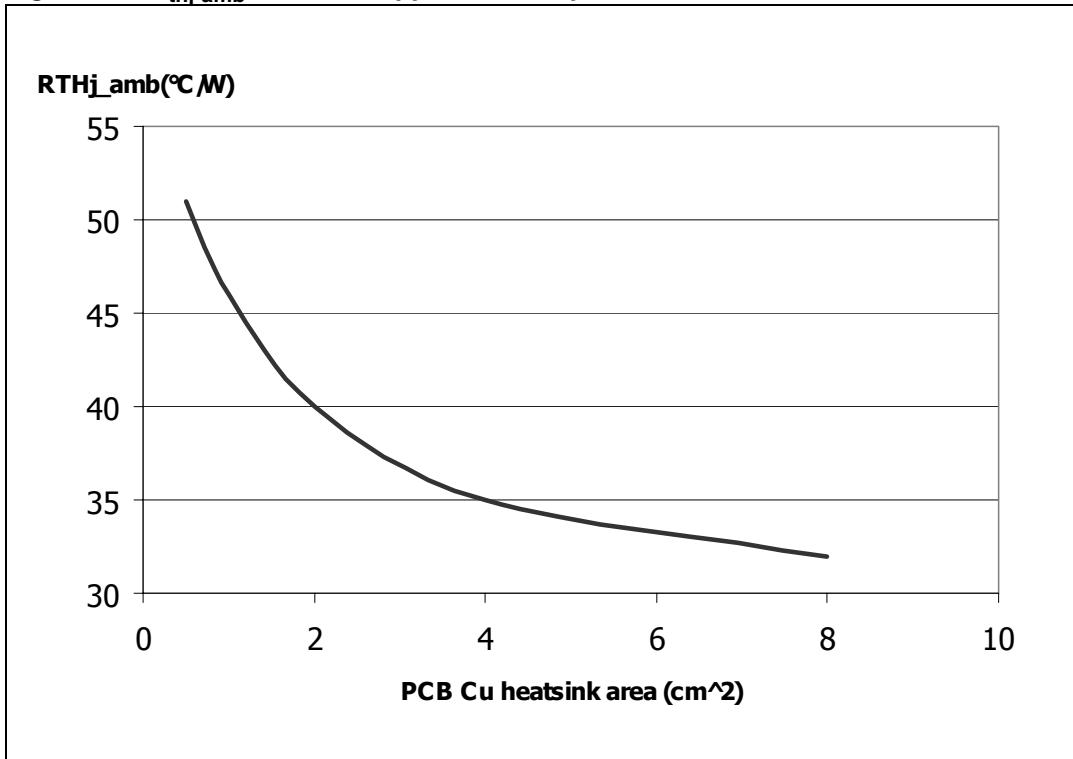

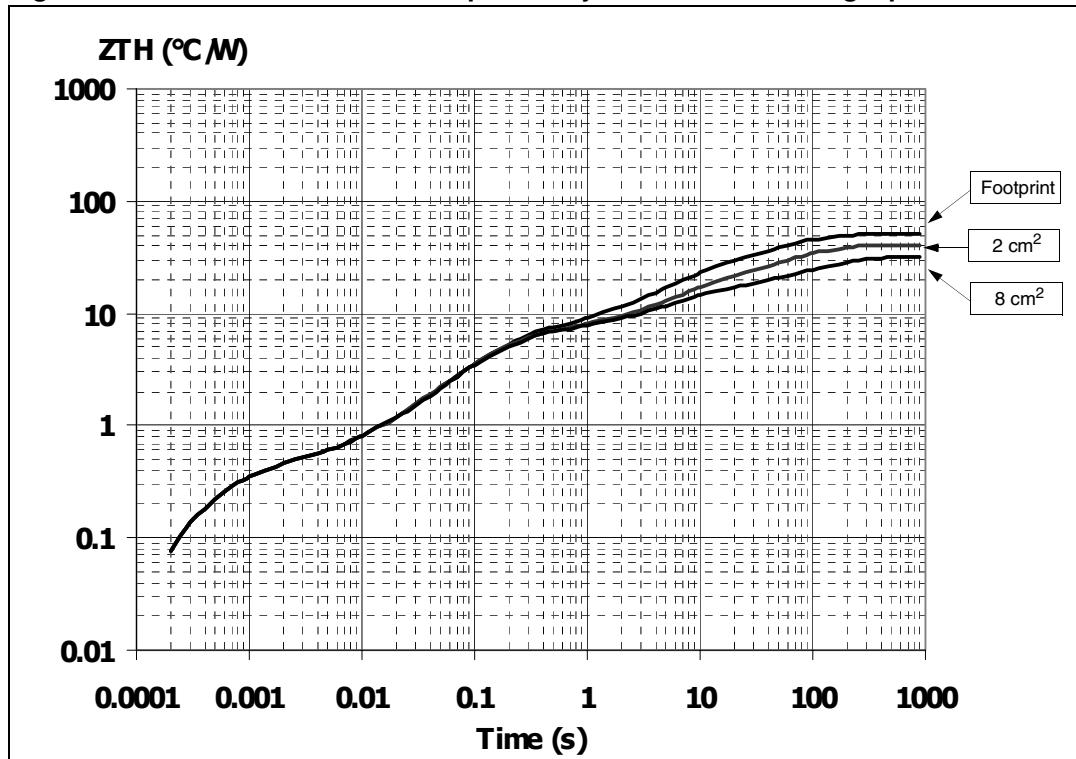

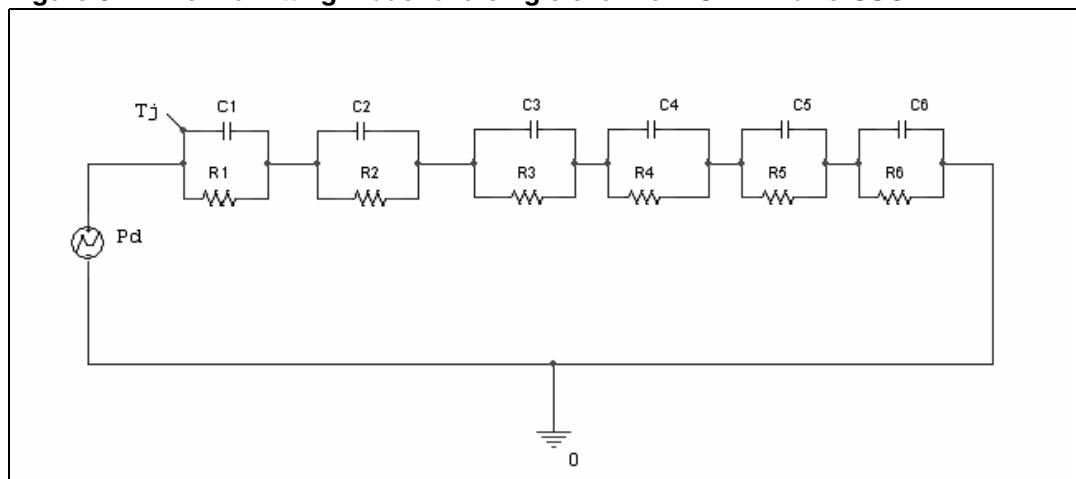

Figure 30. PowerSSO-24 thermal impedance junction ambient single pulse

Equation 1: pulse calculation formula

$$Z_{TH\delta} = R_{TH} \cdot \delta + Z_{THtp}(1 - \delta)$$

where $\delta = t_p / T$

Figure 31. Thermal fitting model of a single channel HSD in PowerSSO-24 ^(a)

- a. The fitting model is a simplified thermal tool and is valid for transient evolutions where the embedded protections (power limitation or thermal cycling during thermal shutdown) are not triggered.

5 Package and packing information

5.1 ECOPACK® packages

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second-level interconnect. The category of Second-Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97.

The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.

5.2 PowerSSO-24 package mechanical data

Figure 32. PowerSSO-24 package dimensions

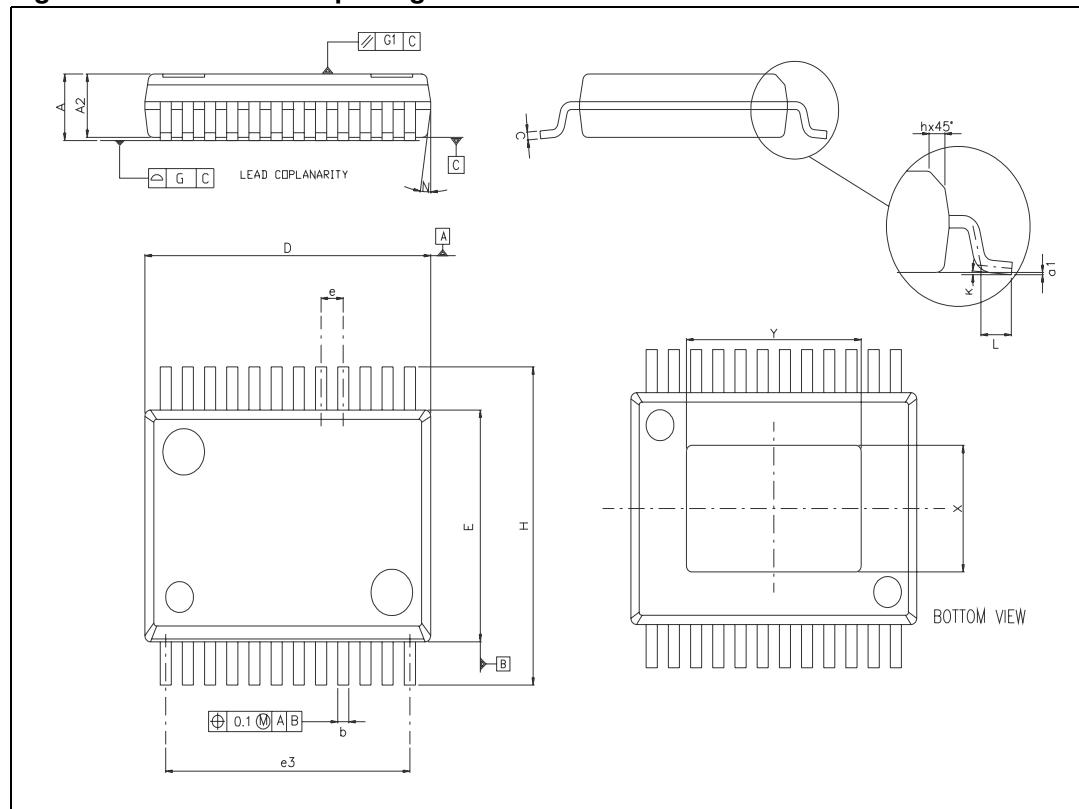

Table 14. PowerSSO-24 mechanical data

Symbol	Millimeters		
	Min.	Typ.	Max.
A	2.15		2.47
A2	2.15		2.40
a1	0		0.1
b	0.33		0.51
c	0.23		0.32
D	10.10		10.50
E	7.4		7.6
e		0.8	
e3		8.8	
G			0.1
G1			0.06
H	10.1		10.5
h			0.4
L	0.55		0.85
N			10deg
X	4.1		4.7
Y	6.5		7.1

5.3 PowerSSO-24 packing information

Figure 33. PowerSSO-24 tube shipment (no suffix)

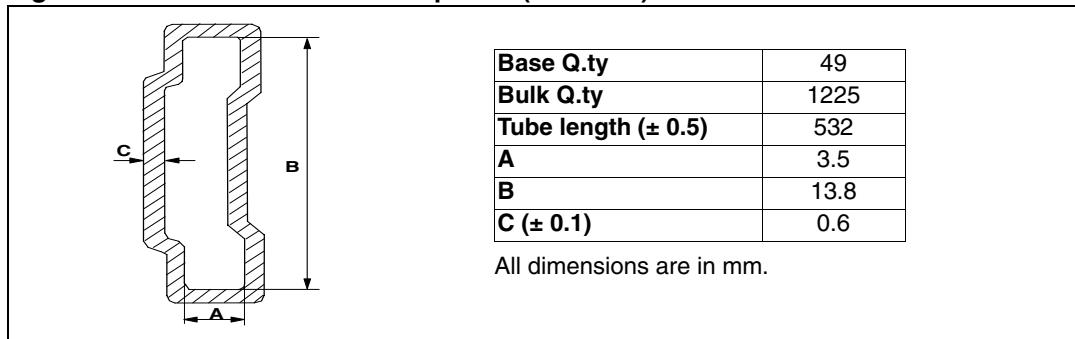

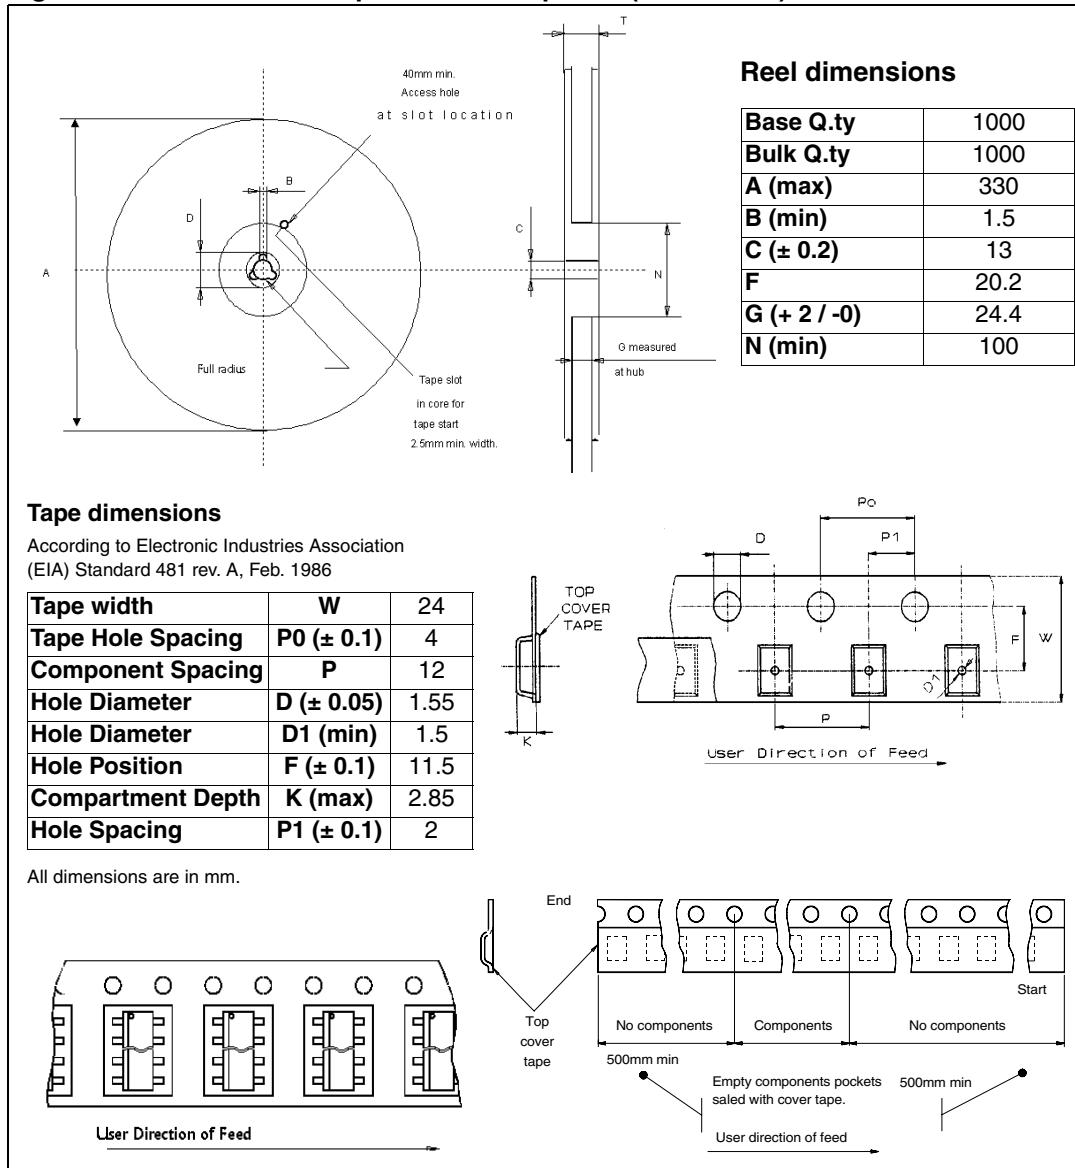

Figure 34. PowerSSO-24 tape and reel shipment (suffix "TR")

6 Revision history

Table 15. Document revision history

Date	Revision	Changes
24-Jan-2006	1	Initial release.
13-Feb-2007	2	Document reformatted and restructured. Added <i>Section 3.4: Maximum demagnetization energy (VCC = 13.5V)</i> .
03-Oct-2007	3	Document reformatted and restructured. Added lists of tables and figures. Added <i>ECOPACK® packages</i> information. <i>Table 4: Absolute maximum ratings</i> : changed E _{MAX} value from 283 to 508 mJ. <i>Table 10: Current sense (8V < V_{CC} < 16V)</i> : added dk1/k1, dk2/k2, dk3/k3, Δt _{DSENSE2H} parameters. Added <i>Figure 5: Delay response time between rising edge of output current and rising edge of current sense (CS enabled)</i> . Updated <i>Figure 6: I_{OUT}/I_{SENSE} Vs. I_{OUT}</i> . Added <i>Figure 7: Maximum current sense ratio drift vs load current</i> . <i>Table 12: Electrical transient requirements</i> - Updated test level values III and IV for test pulse 5b and notes.
13-Dec-2007	4	Updated <i>Table 10: Current sense (8V < V_{CC} < 16V)</i> : – changed dk1/k1 values from ± 7 to ± 8 % – changed dk2/k2 values from ± 3 to ± 5 % – changed dk3/k3 values from ± 2 to ± 4 % – changed t _{DSENSE2H} max value from 600 μs to 400 μs – changed Δt _{DSENSE2H} max value from 250 μs to 300 μs – added I _{OL} parameter. Updated <i>Figure 7: Maximum current sense ratio drift vs load current</i> with new dk/k values.
12-Feb-2008	5	Corrected typing error in <i>Table 10: Current sense (8V < V_{CC} < 16V)</i> : changed I _{OL} test condition from V _{IN} = 0V to V _{IN} = 5V.
01-Aug-2008	6	Updated <i>Table 14: PowerSSO-24 mechanical data</i> : changed a1 max. value from 0.075 mm to 0.1 mm.

Please Read Carefully:

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.

UNLESS EXPRESSLY APPROVED IN WRITING BY AN AUTHORIZED ST REPRESENTATIVE, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.

ST and the ST logo are trademarks or registered trademarks of ST in various countries.

Information in this document supersedes and replaces all information previously supplied.

The ST logo is a registered trademark of STMicroelectronics. All other names are the property of their respective owners.
