

COMMERCIAL GRADE 90mV DC OUTPUT PRESSURE TRANSDUCER MODEL 12000

The **Model 12000** is a diffused silicon based pressure sensor that is ideal for moderate accuracy pressure measurements in industrial and automotive environments.

The diffused silicon technology provides 90mV output span and excellent linearity over its compensated temperature range. The silicon diaphragm and molded construction can withstand the harsh environments seen in industrial applications

Media compatibility is with all liquids and gasses compatible with silicon, stainless steel and epoxy resins. Media does not contact any electrical circuitry.

- **High Overpressure Capability**
- **Wide Compensated Temperature Range**
- **High Pressure Range Capability**
- **Excellent Long-term Stability**
- **Low Cost with Moderate Accuracy**
