查询SGC-2486Z供应商

## **SIRENZA** MICRODEVICES Product Description

Sirenza Microdevices' SGC-2486Z is a high performance SiGe HBT MMIC amplifier utilizing a Darlington configuration with a patented active bias network. The active bias network provides stable current over temperature and process Beta variations. Designed to run directly from a 3V supply, the SGC-2486Z does not require a dropping resistor as compared to typical Darlington amplifiers. The SGC-2486Z is designed for high linearity 3V gain block applications that require small size and minimal external components. It is internally matched to 50 ohms.

# SGC-2486Z

捷多邦,专业PCB打样工厂,24小时加急出货

50-4000 MHz Active Bias Silicon Germanium Cascadable Gain Block

## **Product Features**

- Single Fixed 3V Supply
- No Dropping Resistor Required
- Patented Self-Bias Circuitry
- P1dB = 10.8 dBm at 1950 MHz
- OIP3 = 23.5 dBm at 1950 MHz
- Robust 1000V ESD, Class 1C HBM

### Applications

- PA Driver Amplifier
- Cellular, PCS, GSM, UMTS, WCDMA
- IF Amplifier
- Wireless Data, Satellite
