

### Product Description

The SGL-0622Z is a low noise, high gain MMIC LNA designed for low power single-supply operation from 2.7-3.6V. Its Class-1C ESD protection and high input overdrive capability ensures rugged performance, while its integrated active bias circuit maintains robust stable bias over temperature and process beta variation. The SGL-0622Z is internally matched from 5-4000 MHz and requires only 4-5 external biasing components (DC blocks, bypass caps, inductive choke). The SGL-0622Z is fabricated using highly repeatable Silicon Germanium technology and is housed in a cost-effective RoHS/WEEE compliant QFN 2x2 miniature package.

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias Conditions should also satisfy the following expression:  
 $I_D V_D < (T_J - T_L) / R_{TH}, j-I \quad T_L = T_{LEAD}$

**Caution: ESD sensitive**

Appropriate precautions in handling, packaging and testing devices must be observed.
