DESCRIPTION

The 74ALVCH16244 is a low voltage CMOS 16 BIT BUS BUFFER (NON INVERTED) fabricated with sub-micron silicon gate and five-layer metal wiring C²MOS technology. It is ideal for low power and very high speed 1.65 to 3.6V applications; it can be interfaced to 3.6V signal environment for both inputs and outputs.

Any $n\bar{G}$ output control governs four BUS BUFFERS. Output Enable input ($n\bar{G}$) tied together gives full 16-bit operation.

When $n\bar{G}$ is LOW, the outputs are enabled. When $n\bar{G}$ is HIGH, the outputs are in high impedance state.

Active bus-hold circuitry is provided to hold unused or floating data inputs at a valid logic level. This device is designed to be used with 3 state memory address drivers, etc.

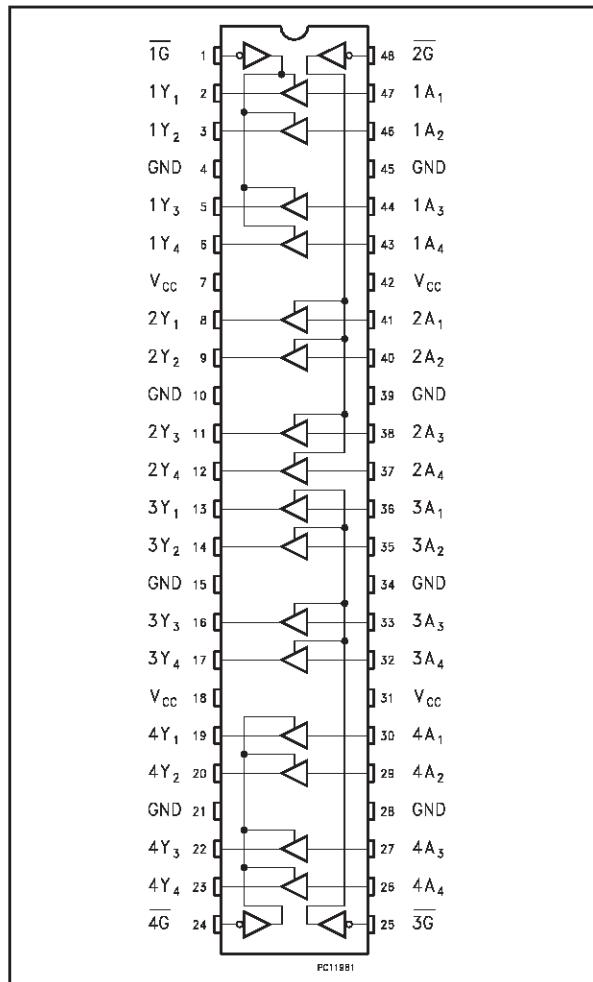

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
