## Low Voltage Octal Buffer/Line Driver with TRI-STATE® Outputs

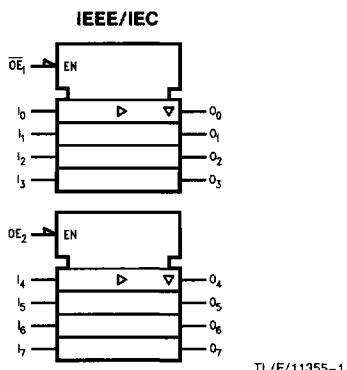

### General Description

The LVQ241 is an octal buffer and line driver designed to be employed as a memory address driver, clock driver and bus oriented transmitter or receiver which provides improved PC board density.

### Features

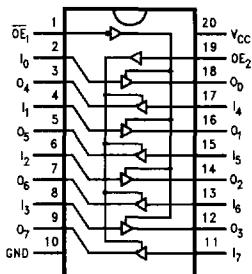

- Ideal for low power/low noise 3.3V applications
- Implements patented Quiet Series EMI reduction circuitry
- Available in SOIC JEDEC, SOIC EIAJ and QSOP packages
- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Improved latch-up immunity
- Guaranteed incident wave switching into  $75\Omega$
- 4 kV minimum ESD immunity
- MIL-STD-883 54ACQ products are available for Military/Aerospace applications

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
