General Description

The APL5885 is a 3-pin low dropout linear regulator with 2.0% accuracy of output voltage over line, load and temperature variations. Dropout voltage at 500mA output current is less than 1.3V. Both output current limiting and thermal shutdown are built in to provide maximal protection to the APL5885 against fault conditions. The over current and thermal shutdown circuits become active when the current exceed 500mA, or the junction temperature reach 150°C. Normal operation is recovered when junction temperature drops below 130°C.

Applications

- Voltage Regulator for CD-ROM Drivers
- Voltage Regulator for LAN Cards
- Wireless Communication Systems
- Portable Instrument
- Portable Consumer Equipment
- Low Voltage Systems
