

6-Channel Low Noise Charge Pump White LED Driver

FEATURES

- Drives up to 4 main LEDs and 2 sub LEDs
- Separate control for main and sub LEDs
- Compatible with supply voltage of 3V to 5.5V
- Power efficiency up to 90%
- Output current up to 30mA per LED
- High-frequency Operation at 1MHz
- 2 modes of operation 1x and 1.5x
- White LED detect circuitry on all channels
- Shutdown current less than 1 μ A
- Small ceramic capacitors
- Soft start and current limiting
- Short circuit protection
- 16-pad TQFN package, 0.8mm max height

APPLICATION

- Cell phone main and sub-display backlight
- Navigation
- PDAs
- Digital Cameras

ORDERING INFORMATION

Part Number	Package	Quantity per Reel	Marking
CAT3606HV4-T2	TQFN-16 ⁽¹⁾	2000	G366
CAT3606HV4-GT2	TQFN-16 ⁽²⁾	2000	CDBB

Notes: (1) Matte-Tin Plated Finish (RoHS-compliant).
(2) NiPdAu Plated Finish (RoHS-compliant).

DESCRIPTION

The CAT3606 controls up to four LEDs for the main display and two LEDs for the sub-display in cellular phones. The device is capable of operating in either 1x (LDO) mode or 1.5x charge pump mode. All LED pin currents are regulated and tightly matched to achieve uniformity of brightness across the LCD backlight. An external resistor (R_{SET}) sets the nominal output current.

The device can deliver as much as 20mA per channel during low voltage operation (3V), and 30mA per channel during nominal operation (3.3V). A constant high-frequency switching scheme (1MHz) provides low noise and allows the use of very small value ceramic capacitors..

A “zero” quiescent current mode can be achieved via the chip enable pin EN. The Main and Sub LEDs each have their own dedicated ON/OFF control pins $\overline{ENM}$, $\overline{ENS}$ Dimming can be achieved using either a DC voltage to control the R_{SET} pin current, or by applying a PWM signal on the $\overline{ENM}$ and $\overline{ENS}$ pins.

The device is available in a 16-pad TQFN package with a max height of 0.8mm.

For Ordering Information details, see page 11.

TYPICAL APPLICATION CIRCUIT

PIN CONFIGURATION ⁽¹⁾

PIN DESCRIPTIONS

Pin Number	Name	Function
1	LED6	LED6 cathode terminal
2	EN	Enable/shutdown input, active high
3	$\overline{\text{ENM}}$	Enable "main" input for LED1 to LED4, active low
4	$\overline{\text{ENS}}$	Enable "sub" input for LED5 and LED6, active low
5	RSET	The LED output current is set by the current sourced out of the RSET pin
6	VOUT	Charge pump output connected to the LED anodes
7	VIN	Supply voltage
8	C1+	Bucket capacitor 1 terminal
9	C1	Bucket capacitor 1 terminal
10	C2	Bucket capacitor 2 terminal
11	C2+	Bucket capacitor 2 terminal
12	LED1	LED 1 cathode terminal
13	LED2	LED 2 cathode terminal
14	LED3	LED 3 cathode terminal
15	LED4	LED 4 cathode terminal
16	LED5	LED 5 cathode terminal
PAD	GND	Ground reference

Notes:

(1) The "exposed pad" under the package must be connected to the ground plane on the PCB.

ABSOLUTE MAXIMUM RATINGS

Parameter	Rating	Unit
V _{IN} , V _{OUT} , LEDx voltage	-0.3 to 7.0	V
EN, ENM, ENS voltage	-0.3 to V _{IN}	V
RSET voltage	-0.3 to V _{IN}	V
RSET current	± 1	mA

Notes:

(1) Machine model is with 200pF capacitor discharged directly into each pin.

BLOCK DIAGRAM

Figure 2. CAT3606 Functional Block Diagram

BASIC OPERATION

At power-up, the CAT3606 starts operation in 1x mode. If it is able to drive the programmed LED current, it continues in 1x mode. If the battery voltage drops to a level where the LED current cannot be met, the driver automatically switches into 1.5x mode, to boost the output voltage high enough to achieve the nominal LED current.

The above sequence is reinitialized each and every time the chip is powered up or is taken out of shutdown mode (via EN pin). The use of the Main and Sub display enable pins ($\overline{\text{ENM}}$ or $\overline{\text{ENS}}$) does not affect the mode of operation.

LED CURRENT SETTING

The LED current is set by the external resistor RSET connected between the RSET pin and ground. Table 1 lists various LED currents and the associated RSET resistor value for standard 1% precision surface mount resistors.

Table 1. RSET Resistor Selection

LED Current (mA)	R _{SET} (kΩ)
1	649
2	287
5	102
10	49.9
15	32.4
20	23.7
30	15.4

The enable lines $\overline{\text{ENM}}$ and $\overline{\text{ENS}}$ allow to turn On or Off a group of LEDs as shown in Table 2.

Table 2: LED Selection

Control Lines			LED Outputs	
EN	$\overline{\text{ENM}}$	$\overline{\text{ENS}}$	Main LED1 - LED4	Sub LED5 -LED6
0	X	X	–	–
1	1	1	–	–
1	0	1	ON	–
1	1	0	–	ON
1	0	0	ON	ON

Notes: 1 = logic high (or VIN)
 0 = logic low (or GND)
 – = LED output OFF
 X = don't care

The unused LED channels can also be turned off by connecting the respective LED pins to VOUT. In which case, the corresponding LED driver is disabled and the typical LED Sink current is only about 0.2mA. When the following equation is true on any channel, the driver turns off the LED channel:

$$\text{VOUT} - \text{V}_{\text{LED}} \leq 1\text{V (LED channel OFF)}$$

Note: The CAT3606 is designed to drive LEDs with forward voltage greater than 1V and is not compatible with resistive loads.

TYPICAL CHARACTERISTICS

$V_{IN} = 3.6V$, $EN = V_{IN}$, $\overline{ENM} = \overline{ENS} = GND$, $C_{IN} = C_{OUT} = 1\mu F$, $R_{SET} = 24k\Omega$ (20mA per LED), $T_{AMB} = 25^\circ C$, unless otherwise specified.

TYPICAL CHARACTERISTICS

$V_{IN} = 3.6V$, $EN = V_{IN}$, $\overline{ENM} = \overline{ENS} = GND$, $C_{IN} = C_{OUT} = 1\mu F$, $T_{AMB} = 25^{\circ}C$, unless otherwise specified.

PWM Dimming at 1kHz on $\overline{ENM}$ and $\overline{ENS}$

RECOMMENDED LAYOUT

When the driver is in the 1.5x charge pump mode, the 1MHz switching frequency requires to minimize trace length and impedance to ground on all 4 capacitors. A ground plane should cover the area on the bottom side of the PCB opposite to the IC and the bypass capacitors. Capacitors C_{in} and C_{out} require short connection to ground which can be done with multiple vias as shown on Figure 2. A square copper area matches the QFN16 exposed pad (GND) and must be connected to the ground plane underneath. The use of multiple via will improve the heat dissipation.
