Description

The CD54AC257/3A and CD54ACT257/3A are quad 2-input multiplexers with three-state outputs. These devices utilize the Harris Advanced CMOS Logic technology. Each of these devices selects four bits of data from two sources under the control of a common Select input (S). The Output Enable ($\overline{OE}$) is active LOW. When $\overline{OE}$ is HIGH, all of the outputs (Y) are in the high-impedance state regardless of all other input conditions.

Moving data from two groups of registers to four common output buses is a common use of the CD54AC/ACT257/3A. The state of the Select input determines the particular register from which the data comes. The CD54AC/ACT257/3A can also be used as function generators.

The CD54AC257/3A and CD54ACT257/3A are supplied in 16 lead dual-in-line ceramic packages (F suffix).

ACT INPUT LOAD TABLE
