

DR-11525

## 16-Bit High Frequency Hybrid Digital-to-Resolver Converter

Make sure the next  
Card you purchase  
has...™

### DESCRIPTION

The DR-11525 is a versatile multiplying digital-to-resolver converter. The digital input represents an angle, and the output is resolver type, sin/cos. The reference input will accept any waveform, even a sawtooth for CRT drive. Because the reference is DC-coupled to the output, the DR-11525 can be used as: a digital-to-resolver converter using a sinusoidal reference as an input; a digital-to-sin/cos dc converter using a DC reference; a polar-to-rectangular converter using a reference input proportional to the radius vector; or a rotating cart-wheel sweep generator for PPI displays using a sawtooth reference.

The DR-11525 is a complete D/R converter in one hybrid module. The DR-11525 circuit design allows for higher accuracy and reduces the output scale factor variation so that the output can drive displays directly. The output line-to-ground voltage can be scaled by external resistors. The DR-11525 also includes high AC and DC common-mode rejection at the reference input.

### APPLICATIONS

Because of its high reliability, small size and low power consumption, the hybrid DR-11525 is ideal for the most stringent and severe industrial and military ground or avionics applications. All units are available with MIL-PRF-38534 processing as a standard option.

Among the many possible applications are computer-based systems in which digital angle information is processed, such as synchro/resolver simulators, flight trainers, flight instrumentation, fire control systems, IR, and radar and navigation systems. In addition, the DR-11525 is ideal for motor and robotic control test systems.

Data Device Corporation  
105 Wilbur Place  
Bohemia, New York 11716

[www.ddc-web.com](http://www.ddc-web.com)

### FEATURES

- Accuracy Up to 1 Minute
- Operational Up to 10 kHz
- 2 Vrms, 6.81 Vrms, 11.8 VL-L, or Scalable Resolver Outputs
- 2 mA rms Output
- 16-Bit Resolution
- 8-Bit/2-Byte Double Buffered Transparent Latches
- DC-Coupled Reference Accepts Any Waveform
- High-Rel CMOS D/R Chip
- No +5 V Supply Required

Apply over temperature range, power supply range, reference voltage and frequency range, and 10% harmonic distortion in the reference.

PARAMETER	UNIT	VALUE
<b>RESOLUTION</b>	Bits	16
<b>ACCURACY AND DYNAMICS</b>		
Output Accuracy	Minutes	4 to 1 min. (See Ordering information) 1 minute part: 1 min up to 1 kHz, 1.5 min for 1 to 5 kHz, and 3 min for 5 to 10 kHz (guaranteed by design - tested at 5 kHz)
Differential Linearity Output Settling Time	LSB μsec	±1 max Less than 20 for any digital step change
<b>DIGITAL INPUT</b>		
Logic Type		Natural binary angle, parallel positive logic CMOS and TTL compatible. Inputs are CMOS transient protected. Logic 0 = 0 to +1 V Logic 1 = +2.2 V to +5 V
Load Current	μA	20 max to GND (bits 1-16) 20 max to +5 V ( $\overline{LL}$ , $\overline{LM}$ , $\overline{LA}$ ) See Timing Diagram (FIGURE 2.).
<b>REFERENCE INPUT</b>		
Type		Three differential solid-state inputs: two for standard 26 V, one programmable. DC to 10 k
Frequency Range	Hz	
<b>Standard Input Voltage</b> (Note 1)		
RH3-RL3	V	4.4
RH2-RL2	V	26
RH-RL	V	26
<b>INPUT IMPEDANCE</b>		
Single-Ended: RH-gnd	k ohm	100 ±0.5%
Differential: RH to RL	k ohm	200 ±0.5%
<b>ANALOG OUTPUT</b>		
Type		Resolver
Output Current	mA rms	2 max (Tracks Reference Input Voltage)
<b>Standard Output Voltage</b> (Note 2)		
RH-RL	Vrms <sub>L-L</sub>	11.8 nominal
RH2-RL2	Vrms	6.81 (single ended)
RH3-RL3	Vrms	2.0 nominal (single ended)
Transform. Ratio Tol.	%	±0.5 max
Scale Factor Variation	%	±0.1 max
DC Offset (Single ended)	mV	±15 max Varies with input angle.
<b>POWER SUPPLIES</b>		
Voltage	V	+15 ±5%      -15 ±5%
<b>Max volt. w/o damage</b>		<b>+18 V      -18 V</b>
Current or Impedance	mAmax	35+ load current      35+ load current
<b>TEMPERATURE RANGES (CASE)</b>		
Operation		
-1 Option	°C	-55 to +125
-2 Option	°C	-40 to +85
-3 Option	°C	0 to +70
Storage	°C	-55 to +135
<b>PHYSICAL CHARACTERISTICS</b>		
Package Type		36-pin DDIP
Size	in.(mm)	0.78 x 1.9 x 0.21 (19.7 x 48.1 x 5.3)
Weight	oz (g)	0.85 (24)

Notes: 1) Maximum reference input RH-RL = 26 V +10%; RH2-RL2 = 26 V +10%; RH3-RL3 = 16.4 V.

2) Minimum voltage output (when using scalable reference input) is 1 V differential or 0.5 V single ended.

3) Differential is line-to-line (L-L); single ended is line-to-ground (L-gnd).

## INTRODUCTION

As shown in FIGURE 1, the signal conversion in the DR-11525 is performed by a high-accuracy digital-to-resolver converter whose sin and cos outputs have a low scale factor variation as a function of the digital input angle. This resolver output is amplified by scaling amplifiers for resolver output. The output line currents can be 2 mA rms max, which is sufficient for driving R/D converters, solid-state control transformers, and displays. Output power amplifiers will be required, however, for driving electro-mechanical devices such as synchros and resolvers.

The reference conditioner has a differential input with high AC and DC common mode rejection, so that a reference isolation transformer will seldom be required. There are three sets of reference inputs which provide three different input/output ratios. The RH- RL input provides a 0.45 ratio between the reference input and the signal output and is designed to provide 11.8 V<sub>L-L</sub> differential output for a 26 Vrms reference input. The RH2-RL2 input provides a 0.52 ratio between the reference input and the signal output and is designed to provide a 6.81 Vrms single-ended output for a 26 Vrms reference input. The RH3-RL3 input provides a 0.91 ratio between the reference input and the signal output and is designed to provide a 2 Vrms single-ended output for a 4.4 Vrms reference input. Series resistors can be added to accommodate higher reference levels or to reduce the output level.

The reference conditioner output -R is intended for test purposes. For a 26 Vrms nominal input to RH, RL, -R should be 5.9 Vrms.

The timing relationship of  $\overline{LL}$ ,  $\overline{LM}$ , and  $\overline{LA}$  is shown in FIGURE 2 as a design reference.

**FIGURE 2.  $\overline{LL}$ ,  $\overline{LM}$ ,  $\overline{LA}$  TIMING DIAGRAM**

## OUTPUT SCALING AND REF. LEVEL ADJUSTMENT

The DR-11525 operates like a multiplying D/A converter in that the voltage of each output line is directly proportional to the reference voltage. See FIGURE 3.

The magnitude of the resistors,  $R'$ , in ohms is calculated as follows:

$$\text{For RH-RL: } \frac{V_{out_{L-L}}}{V_{in}} = \frac{45.38k}{100k + R'}$$

$$\text{*For RH2-RL2: } \frac{V_{out_{L-L}}}{V_{in}} = \frac{45.38k}{86.63k + R'}$$

$$\text{*For RH3-RL3: } \frac{V_{out_{L-L}}}{V_{in}} = \frac{45.38k}{49.92k + R'}$$

\*Note: For RH2, RL2 and RH3, RL3:  $V_{out}(\text{single-ended}) = 1/2 V_{out_{L-L}}$ .

FIGURE 3. REFERENCE LEVEL ADJUSTMENT

FIGURE 4. DIFFERENTIAL RESOLVER OUTPUT

## OUTPUT PHASING AND OUTPUT SCALE FACTOR

The analog output signals have the following phasing:

Resolver output:

$$S3-S1 = (RH - RL)A_o(1 + A(\theta)) \sin \theta$$

$$S2-S4 = (RH - RL)A_o(1 + A(\theta)) \cos \theta$$

The output amplifiers simultaneously track reference voltage fluctuations because they are proportional to  $(RH - RL)$ . The transformation ratio  $A_o$  is 11.8/26 for 11.8 Vrms<sub>L-L</sub> output. The maximum variation in  $A_o$  from all causes is  $\pm 0.2\%$ . The term  $A(\theta)$  represents the variation of the amplitude with the digital signal input angle.  $A(\theta)$ , which is called the scale factor variation, is a smooth function of  $(\theta)$  without discontinuities and is less than  $\pm 0.1\%$  for all values of  $(\theta)$ . Therefore, the analog output can vary as much as  $\pm 0.3\%$  due to the transformation ratio and scale factor variations.

Because the amplitude factor  $(RH - RL)A_o(1 + A(\theta))$  varies simultaneously on all output lines, it will not be a source of error when the DR-11525 is to drive a ratiometric system such as a synchro or resolver. However, if the outputs are used independently, as in x-y plotters, the amplitude variations must be taken into account.

TABLE 2. PIN CONNECTION TABLE

PIN	NAME	PIN	NAME	PIN	NAME
1	NC	13	Bit 13	25	Bit 1 (MSB)
2	+15V	14	Bit 12	26	Bit 15
3	GND	15	Bit 11	27	Bit 16 (LSB)
4	-15V	16	Bit 10	28	LM
5	RH2 (6.81V)	17	Bit 9	29	LL
6	RL2 (6.81V)	18	Bit 8	30	LA
7	-R	19	Bit 7	31	S4 (-COS)
8	RL (11.8V)	20	Bit 6	32	S1 (-SIN)
9	RL3 (2V)	21	Bit 5	33	NC
10	RH (11.8V)	22	Bit 4	34	NC
11	RH3 (2V)	23	Bit 3	35	S3 (+SIN)
12	Bit 14	24	Bit 2	36	S2 (+COS)

Notes:

1. -R (Pin 7) can be used for test purposes to detect whether a reference signal is present. See block diagram.
2. Functions LL, LA, and LM may be left unconnected when not used.
3. External scaling resistor pin 11 RH3 output pins (31, 32, 35, 36).
4. RH and RL (pins 10, 8) 26 V reference with differential outputs on pins 35, 32, 31.
5. RH2 and RL2 (pins 5, 6) 26 V reference with single-ended output on pins 35, 36.
6. RH3 and RL3 (pins 11, 9) 4.4 V reference with single-ended outputs on pins 35, 36.

## ORDERING INFORMATION

DR-11525D X-XXXX

### Supplemental Process Requirements:

S = Pre-Cap Source Inspection  
 L = Pull Test  
 Q = Pull Test and Pre-Cap Inspection  
 K = One Lot Date Code  
 W = One Lot Date Code and PreCap Source  
 Y = One Lot Date Code and 100% Pull Test  
 Z = One Lot Date Code, PreCap Source and 100% Pull Test  
 Blank = None of the Above

### Accuracy:

3 = 4 minutes + 1 LSB  
 4 = 2 minutes + 1 LSB  
 5 = 1 minute + 1 LSB\*

### Reliability:

0 = Standard DDC Processing, no Burn-In (See table below.)  
 1 = MIL-PRF-38534 Compliant  
 2 = B\*\*  
 3 = MIL-PRF-38534 Compliant with PIND Testing  
 4 = MIL-PRF-38534 Compliant with Solder Dip  
 5 = MIL-PRF-38534 Compliant with PIND Testing and Solder Dip  
 6 = B\*\* with PIND Testing  
 7 = B\*\* with Solder Dip  
 8 = B\*\* with PIND Testing and Solder Dip  
 9 = Standard DDC Processing with Solder Dip, no Burn-In (See table below.)

### Temperature Grade/Data Requirements:

1 = -55 to +125°C (Case)  
 2 = -40 to +85°C (Case)  
 3 = 0 to +70°C (Case)  
 4 = -55 to +125°C (Case) + Variables Data  
 5 = -40 to +85°C (Case) + Variables Data  
 8 = 0 to +70°C (Case) + Variables Data

### Options:

X = NONE

### Package:

D = DIP Package  
 F = Flat Package

\* Consult factory for availability of  $\pm 1$  minute parts.

\*\* Standard DDC Processing with burn-in and full temperature test (See table below).

STANDARD DDC PROCESSING		
TEST	MIL-STD-883	
	METHOD(S)	CONDITION(S)
INSPECTION	2009, 2010, 2017, and 2032	—
SEAL	1014	A and C
TEMPERATURE CYCLE	1010	C
CONSTANT ACCELERATION	2001	A
BURN-IN	1015, Table 1	—
