

60mW, Capfree, Stereo Headphone Amplifier

The ISL99202 is a stereo, capfree headphone amplifier. The wide operating voltage of 2.4V to 5.5V makes it versatile enough to be used in mobile battery powered applications powered by 2 AA or Single cell Li-Ion batteries as well as 3.3/5V power supply available notebook computers.

The ISL99202 has robust RF immunity, which makes it ideally suited for today's mobile applications.

It has audiophile quality SNR and THD specifications and Click/Pop suppression.

The ISL99202 comes with Comprehensive Protection features, which include undervoltage and short-circuit protection and thermal shutdown.

The ISL99202 lowest power consumption in the industry is achieved by low I_{qq} and current shutdown.

The product is available in 12 Ld TQFN and 0.4mm pitch 12 ball WLCSP.

*Please refer to TB347 for details on reel specifications.

NOTES:

- These Intersil Pb-free WLCSP and BGA packaged products employ special Pb-free material sets; molding compounds/die attach materials and SnAgCu - e1 solder ball terminals, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free WLCSP and BGA packaged products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
- These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
- Contact factory for ordering details.

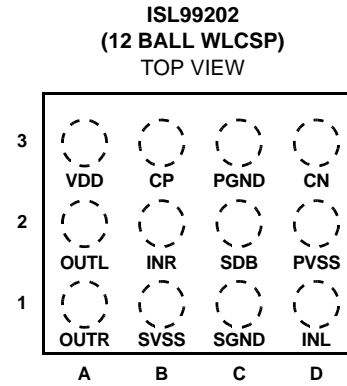

Features

- Supports 16Ω to 600Ω Speaker Impedance
- Ground Referenced: No Output Coupling Capacitors
- Audiophile Quality Sound THD of 0.01%, SNR of 102dB
- PSRR < -90dB, No Need for LDO
- Wide Operating Voltage of 2.4V to 5.5V
- < 3mA Quiescent Current and 0.1μA Shutdown Current
- State of the Art Pop and Click Suppression
- Pb-Free (RoHS Compliant)

Applications

- Mobile Phones
- MP3 Players

Pinouts

Pin Descriptions

PIN NUMBER		PIN NAME	DESCRIPTION
TQFN	WLCSP		
1	B3	CP	Charge pump positive terminal
2	C3	PGND	Charge pump Ground
3	D3	CN	Charge pump negative terminal
4	D2	PVSS	Charge pump output
5	C2	SDB	Active low shutdown input
6	D1	INL	Left channel input
7	C1	SGND	Analog ground
8	B2	INR	Right channel input
9	B1	SVSS	Amplifier negative supply
10	A1	OUTR	Right channel output
11	A2	OUTL	Left channel output
12	A3	VDD	Positive power supply

NOTE: Exposed Pad is connected to PGND and SGND

Absolute Maximum Ratings (Reference to GND)

Supply Voltage. -0.3V to 6V
 INR, INL, CP, SDB. -0.3V to V_{DD} + 0.3V

Operating Conditions

Ambient Temperature Range. -40°C to +85°C
 Maximum Supply Voltage (V_{DD} Pin) 5.5V
 Operating Supply Voltage (V_{DD} Pin) 2.4V to 5V

Thermal Information

Thermal Resistance (Typical, Notes 4, 5) θ_{JA} (°C/W) θ_{JC} (°C/W)
 TQFN Package 54 8
 WLCSP Package 90 N/A
 Maximum Junction Temperature (Plastic Package) -65°C to +150°C
 Maximum Storage Temperature Range -65°C to +150°C
 Dissipation Ratings
 Derating Factor
 12 LD 3x3 TQFN 14.7mW/°C
 12 Ball 3x4 Array WLCSP 10.1mW/°C
 Power Rating T_A
 12 Ld 3x3 TQFN
 +25°C 1.84W
 +70°C 1.12W
 +85°C 0.96W
 12 Ball 3x4 Array WLCSP
 +25°C 0.79W
 +70°C 0.33W
 +85°C 0.18W
 Pb-Free Reflow Profile. see link below
<http://www.intersil.com/pbfree/Pb-FreeReflow.asp>

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

4. θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief TB379.
5. For theta θ_{JC} the "case temp." location is the center of the exposed metal pad on the package underside.

Electrical Specifications Typical Values are Tested at V_{DD} = 5V, T_A = +25°C and R_L = 32Ω. All Maximum and Minimum Values Are Established Under the Recommended Operating Supply Voltage Range and Ambient Temperature Range, Unless Otherwise Noted.

Typical Application Circuit

Detailed Description

The ISL99202 incorporates a novel proprietary architecture to eliminate the large output capacitors associated with single supply headphone amplifiers. Traditional charge pump based architectures that eliminated the output capacitors required additional power to operate the charge pump, which made them ill-suited for portable battery powered applications. The ISL99202 architecture eliminates the need for large output capacitors while consuming industry's lowest quiescent and shutdown currents.

Capfree Architecture

At the core of the Capfree architecture is a dynamically adjusted negative voltage regulator. By continuously monitoring the output power requirements, it adjusts the energy delivery circuitry. The feedback system ensures that overhead power required to deliver audio at the headphone speaker is always optimized for lower power dissipation.

Integrated LDO

A high precision LDO integrated into the power path of the amplifier accounts for a 92dB PSRR. This eliminates the need for a dedicated LDO used in some systems resulting in BOM/cost savings.

Offset Cancellation Circuitry

The DC offset is a very important parameter. It is a principal contributor to Click and Pop. In the cast Capfree architecture, the DC offset can also be a source of DC

current in quiescent state. The ISL99202 is tested and trimmed to have very low offset voltages (typically 50μV).

RF Immunity

Most portable applications for ISL99202 are subject to RF radiation from a myriad of sources, like Wi-Fi networks or cellular phone networks. Though these signals are not in the audio band, they can interfere with the audio signals through complex non-linear mechanisms, aliasing or demodulations to create audio band noise. The ISL99202 architecture prevents this coupling into audio band to achieve superior audio performance.

Protection Circuitry

The ISL99202 has comprehensive protection circuitry, which protects the part due to undervoltage, over-temperature and overcurrent. There is hysteresis built into over-temperature and undervoltage, while the overcurrent is designed to limit the output current in case of accidental short circuit or low impedance headphone load connection.
