

## ADJUSTABLE HIGH PRECISION SHUNT REGULATOR

### ■GENERAL DESCRIPTION

The **NJM2820/ 2821/ 2822** is a 1.25V precision shunt regulator.

High precision voltage accuracy of  $\pm 0.7\%$ \* is realized by the total optimization from chip design to packaging. In addition, it features low cathode current of 80uA for low current operation.

It is suitable for AC-DC converter secondary circuit, reference voltage applications for A/D and D/A converters, and other applications where precision reference is required.

### ■PACKAGE OUTLINE

**NJM2820F**  
**NJM2821F**  
**NJM2822F**

### ■FEATURES

- High Precision Voltage Reference      1.250V $\pm$ 0.7%
- Flow Soldering\*
- Minimum Input Current                  80uA typ.
- Operating Voltage                          V<sub>REF</sub> to 13V
- Adjustable Output Voltage
- Bipolar Technology
- Package Outline      MTP5

### ■PIN CONFIGURATION

\* These contents are based on the result that evaluated the arbitrary sample. The characteristic is not guaranteed. The design and reliability that fully considered flow mounting are checked but the influence by temperature profile etc. is also considered. Please consult with sales representatives for a recommendation temperature profile.

Note) Oscillation might occur while operating within the range of safety curve.

So that, it is necessary to make ample margins by taking considerations of fluctuation of the device.
