

ADM1278 Evaluation Board User Guide

FEATURES

Fully functional support evaluation kit for the [ADM1278](#)
 Populated and tested with 12 V, 73 A, 3 mF design
 Special N-MOSFET footprint suits different packages
 Supports up to four sense resistors in parallel
 Supports up to six FETs in parallel
 LED indicated status outputs
 Wide input voltage range of up to 20 V
 FET temperature measurement capability
 Supports cascade setup for multiple boards
 Toggle and push-button switch for easy input control
 PMBus communication supported

PACKAGE CONTENTS

[EVAL-ADM1278EBZ](#) evaluation board

ADDITIONAL HARDWARE NEEDED

Serial I/O interface [USB-SDP-CABLEZ](#) (not included in the evaluation kit and should be ordered separately)
 Only one dongle is required in multiboard cascade setup

SOFTWARE NEEDED

Analog Devices, Inc., hot swap and power monitoring evaluation software

EVALUATION BOARD CONNECTION DIAGRAM

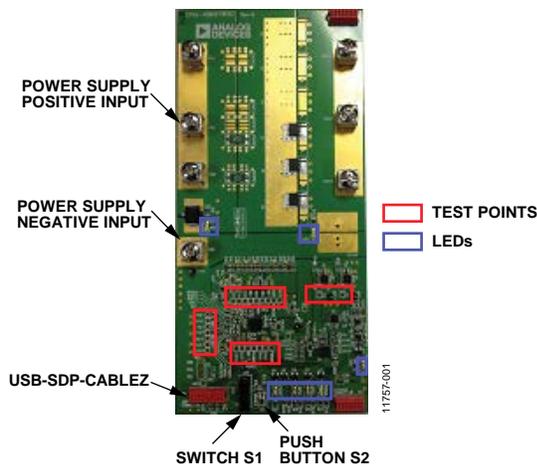

Figure 1.

GENERAL DESCRIPTION

The [EVAL-ADM1278EBZ](#) is a compact full feature evaluation board for the [ADM1278](#). The board layout gives users a clear visual of all the peripheral components and the hot swap power path. The layout also maximizes the board's ability to dissipate heat for some of the key components on the power path, allowing the evaluation of very high current hot swap setups.

Four sense-resistor slots and six multipackage FET slots give users great flexibility and allow a wide range of application setups.

Multiple test points allow easy access to all critical points/pins. Seven LEDs give users direct visual indication on variations in the board status, such as supply input, output, IC power good output, fault output, current sense output, and GPO outputs. An [AD7291](#) 8-channel, I²C, 12-bit SAR ADC allows users to measure voltage such as CSOUT and other pin voltages as well as to read ambient board temperature through an I²C bus in real time.

The kit supports I²C communication, allowing users to communicate with the [ADM1278](#). The evaluation kit also supports cascade setup so multiple evaluation boards can be connected together and share the same I²C bus.

The boards are fully compatible with the [ADM1278](#) evaluation software tool, which can be downloaded from the [ADM1278](#) product page.

Users need a [USB-SDP-CABLEZ](#) USB-to-I²C dongle to use the evaluation software tools.

The standard evaluation kit is prepopulated and tested with a 12 V, 73A hot swap design capable of working with a 3 mF output capacitor.

Complete specifications for the [ADM1278](#) are available in the [ADM1278](#) data sheet from Analog Devices and should be consulted in conjunction with this user guide when using the evaluation boards.

REVISION HISTORY

7/14—Revision 0: Initial Version

QUICK START GUIDE

1. Download the hot swap and power monitor software from www.analog.com/hotswaptools (see the [UG-353](#) user guide for more information).
2. Connect the evaluation board ([EVAL-ADM1278EBZ](#)) to a PC through the 10-way connector and [USB-SDP-CABLEZ](#).
3. Connect the power supply to the evaluation board ([EVAL-ADM1278EBZ](#)) using thick wires suitable for the current levels that will be observed.
4. To confirm that the boards are configured correctly, set the output of the power supply to 12 V with less than 1 A current limit and with no load capacitance. If the boards are configured correctly, the green LED, labeled PWRGD on the [EVAL-ADM1278EBZ](#) should illuminate.
5. Push the ENABLE switch to the off position or press the push-button on the [EVAL-ADM1278EBZ](#). The green LED, labeled PWRGD should turn off, and then turn back on again when re-enabled.
6. If a fault event occurs (for example, a short circuit during operation), the red LED, labeled **FAULT**, illuminates. This can be cleared by toggling the ENABLE pin after the fault has been removed.
7. Disable the hot swap using the **Hot Swap Control** section of the **Basic Operation** tab of the GUI. Disabling the hot swap should turn off the green LED (PWRGD) on the evaluation board.
8. Manually program the sense resistor value if required using the options in the GUI.
9. Check that the voltage and current measurements are as expected in the **Power Monitor** tab of the software GUI.

EVALUATION BOARD DESCRIPTION

The EVAL-ADM1278EBZ is designed to demonstrate several features of the ADM1278. A simplified drawing of the evaluation board is shown in Figure 2.

The EVAL-ADM1278EBZ is connected to a PC using a USB-SDP-CABLEZ dongle for I²C communication.

The EVAL-ADM1278EBZ is shown in Figure 1. To minimize inductance, use thick wires between the power supply and the EVAL-ADM1278EBZ board connector. The PWRGD, VIN, and VOUT LEDs illuminate green after the board is powered.

The board is intended to be plugged into a system where load capacitance already exists. Two through-hole vias are provided to allow the placement of a load capacitor on the board when testing the board outside of a real system. All testing performed on the board was done with a 3 mF load capacitor.

The EVAL-ADM1278EBZ uses a 10 nF CTIMER1 capacitor to maintain a 1 ms FET safe operating area. The undervoltage and overvoltage thresholds were set using resistor dividers. A resistor divider was also used on the ISET pin to set the current limit to approximately 73 A. The constant power level was set to the 237 W to allow the board to power up while maintaining the FET SOA at all times. These values can all be fine-tuned further if necessary.

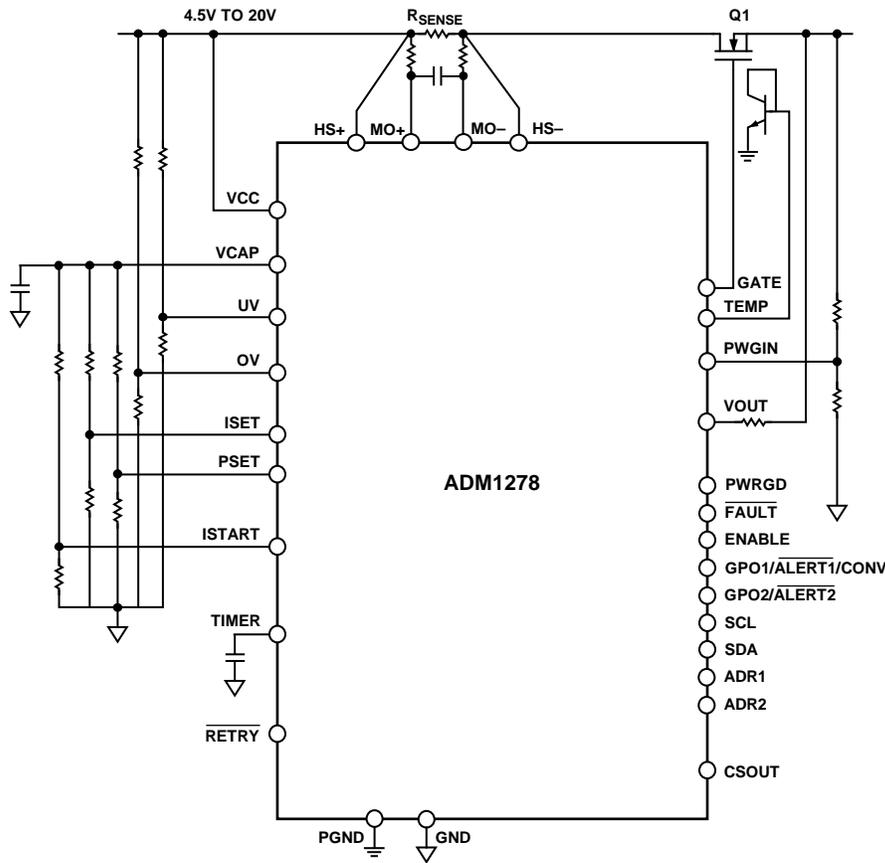

Figure 2. Basic Block Diagram

11757-002

The EVAL-ADM1278EBZ has the capability to mimic power throttling by allowing the user to set a programmable threshold on CSOUT. There is a resistor divider on the board to set the CSOUT within the input threshold range of ADC and another resistor divider is used to set it with in the input threshold range of the comparator. When the CSOUT voltage exceeds the comparator threshold programmed by the AD5622 DAC (via the evaluation software), an alert signal is asserted. The yellow LED (D2) will illuminate to mimic this alert signal. The fast response time of the CSOUT pin to a load step (typically 10 μ s) makes it suitable for fast alerts to overcurrent events. For example, it could be used to drive the fast PROCHOT pin of an Intel processor for power throttling.

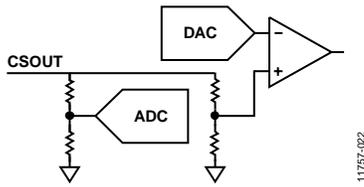

Figure 3.

For the best current sensing accuracy with the footprint shown in Figure 5, chip resistors without a nickel barrier layer (usually in green color) are recommended. The data in this user guide may not be applicable to all resistors and results may vary depending on resistor composition and size. Alternative resistors should be tested independently. It is the responsibility of the user to ensure the layout dimensions and structure of the footprint comply with individual SMT manufacturing requirements. Analog Devices does not accept responsibility for any issues that may arise as a result of using this footprint.

BOARD SPECIFICATIONS

Table 1.

Parameter	Typical Value	Unit
Load Capacitance	3000	μ F
Circuit Breaker Current	69	A
Regulation Current	73	A
Start-Up Current Limit	9.7	A
Constant Power Foldback	237	W
Ambient Temperature	60	$^{\circ}$ C
UV Falling Threshold	9.2	V
UV Rising Threshold	9.7	V
OV Rising Threshold	16.5	V
PWRGD Falling Threshold	10.1	V
TIMER Regulation	167	μ s

EVALUATION BOARD HARDWARE

SWITCH, JUMPER, AND LED FUNCTIONS

Table 2. Connector Functions

Connector	Description
VIN1, VIN2, VIN3	Hot swap line voltage input, which also powers the board. Input voltage is 4.5 V to 20 V. For low voltage operations, provide auxiliary power input through Connector VCC.
VOUT1, VOUT2, VOUT3	Hot swap line voltage output.
GND	Board common ground.
SK1	10-way connector for USB-SDP-CABLEZ
SK2	Bottom cascade connector; connect with the Micro-MaTch ribbon cable to link with another EVAL-ADM1278EBZ board.
SK4	Top cascade connector; connect with the Micro-MaTch ribbon cable to link with another EVAL-ADM1278EBZ board.

Table 3. Switch Functions

Switch	Description
S1	Toggle switch for the ENABLE pin.
S2	Push-button switch for the ENABLE pin.

Table 4. LED Functions

LED	Description
D2	CSOUT comparator output, active high, yellow
D3	FAULT, active low; red
D4	GPO1, active high; blue
D5	GPO2, active high; blue
D6	Power good, active high; green
D7	Board input power; green
D8	Board output power; green

Table 5. On-Board ICs

IC	Description
U1	ADM1278 , main IC
U2	ADP1720ARMZ-3.3 , 4 V to 28 V input, 3.3 V, 50 mA output LDO; powering EEPROM
U3	64 Kb I ² C EEPROM
U4	AD7291 , ±1°C accurate, 8-channel, I ² C, 12-bit SAR ADC with temperature sensor
U6	ADCMP370AKSZ , general-purpose comparator with open-drain output
U7	AD5622YKSZ , 2.7 V to 5.5 V 12-bit nanoDAC® with I ² C compatible interface
U5	ADR435ARMZ , ultralow noise XFET® 5 V output

SK2	8-way Micro-MaTch	FEC 148593
SK3	Header right angle 1 row 3-way SIP-3P 2.54 mm	Do not insert
SK4	8-way female PTH socket Micro-MaTch	FEC 148593
TEMP	Test point	Do not insert
TIMER	Test point	Do not insert
U1	ADM1278 hot swap controller and digital power and energy monitor	ADM1278-2ACPZ
U2	50 mA, high voltage, micropower linear regulator 3.3 V	ADP1720ARMZ-3.3-R7
U3	IC EEPROM serial 64KB SMD MSOP8	FEC 1331335
U4	8-channel, I ² C, 12-bit SAR ADC with temperature sensor	AD7291BCPZ
U5	Ultralow noise XFET voltage references	ADR435ARMZ
U6	Comparator	ADCMP370AKSZ-REEL
U7	12-bit DAC	AD5622YKSZ-2500RL7
UV	Test point	Do not insert
VBUS	Test point	Do not insert
VCAP	Test point	Do not insert
VCC	Test point	Do not insert

Reference Designator	Description	Manufacturer/Part Number
VIN1	Terminal screw vertical	Digi-Key 7691K-ND
VIN2	Terminal screw vertical	Digi-Key 7691K-ND
VIN3	Terminal screw vertical	Digi-Key 7691K-ND
VOUT1	Terminal screw vertical	Digi-Key 7691K-ND
VOUT2	Terminal screw vertical	Digi-Key 7691K-ND
VOUT3	Terminal screw vertical	Digi-Key 7691K-ND
FAULT	Test point	Do not insert
SPISS	Test point	Do not insert

ADP1720	Product Page, 4 V to 28 V Input, 3.3 V, 50 mA Output LDO; Powering EEPROM
ADR435	Product Page, Ultralow Noise XFET® 3.5 µV p-p at 2.5 V Output

NOTES

NOTES

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
