## GaAs pHEMT LOW NOISE AMPLIFIER 0.3 - 3.0 GHz

### Typical Applications

The HMC374SC70E is ideal for:

- Cellular/PCS/3G
- WCS, MMDS & ISM
- Fixed Wireless & WLAN
- Private Land Mobile Radio

### Features

- Single Supply: Vdd = +3.0 to +3.6V
- Broadband Performance
- Low Noise Figure: 1.6 dB
- High Output IP3: +35 dBm
- High Gain: 15 dB @ 0.6 GHz

### Functional Diagram

### General Description

The HMC374SC70E is a general purpose broadband Low Noise Amplifier (LNA) for use in the 0.3 - 3 GHz frequency range. The LNA provides 15 dB of gain and a 1.6 dB noise figure from a single positive supply of +3.0 to +3.6V. The low noise figure coupled with a high P1dB (17 dBm) and high OIP3 (35 dBm) make this part ideal for cellular applications. The compact LNA is designed for repeatable gain and noise figure performance. To minimize board area the design is offered in a low cost SC70E package that occupies only 0.089" x 0.053".

[2] Circuit Board Material: Roger 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads should be connected directly to the ground plane similar to that shown above. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
