## Description:

The OPB916 series of Photologic ${ }^{\circledR}$ photo integrated circuit switches provide optimum flexibility. Each switch consists of an infrared Light Emitting Diode (LED) and a Photologic ${ }^{\circledR}$ photo integrated circuit, mounted in an opaque housing with clear windows for dust protection. The deep slot allows for a longer reach of the optical path from the $0.650^{\prime \prime}$ ( 16.5 mm ) mounting plane. Internal apertures are 0.010 " x .060 " (. $25 \mathrm{~mm} \times 1.52 \mathrm{~mm}$ ) for the Photologic's " S " side and 0.05 " x 0.06 " ( $1.27 \mathrm{~mm} \times 1.52 \mathrm{~mm}$ ) for the LED "E" side.

Devices in this series exhibit stable performance over supply voltages ranging from 4.5 V to 16.0 V , and may be specified as buffered or inverted with an internal $10 \mathrm{k} \Omega$ pull-up resistor or open collector output. Devices are TTL/LSTTL compatible and can drive up to 10 TTL loads.

Custom electrical, wire or cabling are available. Contact your local representative or OPTEK for more information.

## Applications:

- Mechanical switch replacement
- Speed indication (tachometer)
- Mechanical limit indication
- Edge sensing

(2) Derate linearly $1.67 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $25^{\circ}$.
(3) Derate linearly $2.67 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $25^{\circ}$.
(4) Normal application would be with light source blocked, simulated by $I_{F}=0 \mathrm{~mA}$.
(5) All parameters tested using pulse technique.
