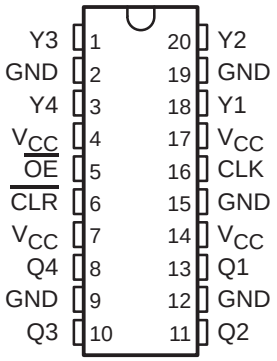
- **Low Output Skew, Low Pulse Skew for Clock-Distribution and Clock-Generation Applications**
- **TTL-Compatible Inputs and CMOS-Compatible Outputs**
- **Distributes One Clock Input to Eight Outputs**
  - **Four Same-Frequency Outputs**
  - **Four Half-Frequency Outputs**
- **Distributed V_{CC} and Ground Pins Reduce Switching Noise**
- **High-Drive Outputs (–48-mA I_{OH}, 48-mA I_{OL})**
- **State-of-the-Art *EPIC*-II*B*™ BiCMOS Design Significantly Reduces Power Dissipation**
- **Package Options Include Plastic Small-Outline (DW)**

DW PACKAGE
(TOP VIEW)



description

The CDC337 is a high-performance, low-skew clock driver. It is specifically designed for applications requiring synchronized output signals at both the clock frequency and one-half the clock frequency. The four Y outputs switch in phase and at the same frequency as the clock (CLK) input. The four Q outputs switch at one-half the frequency of CLK.

When the output-enable ($\overline{OE}$) input is low and the clear ($\overline{CLR}$) input is high, the Y outputs follow CLK and the Q outputs toggle on low-to-high transitions at CLK. Taking $\overline{CLR}$ low asynchronously resets the Q outputs to the low level. When $\overline{OE}$ is high, the outputs are in the high-impedance state.

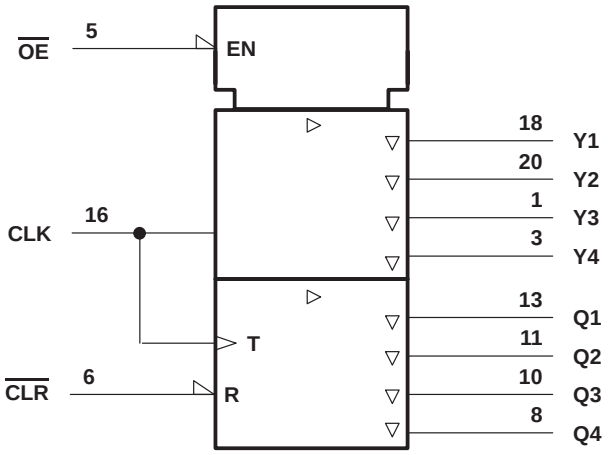
The CDC337 is characterized for operation from –40°C to 85°C.

FUNCTION TABLE

INPUTS			OUTPUTS	
$\overline{OE}$	$\overline{CLR}$	CLK	Y1–Y4	Q1–Q4
H	X	X	Z	Z
L	L	L	L	L
L	L	H	H	L
L	H	L	L	Q_0†
L	H	↑	H	$\overline{Q}_0$†

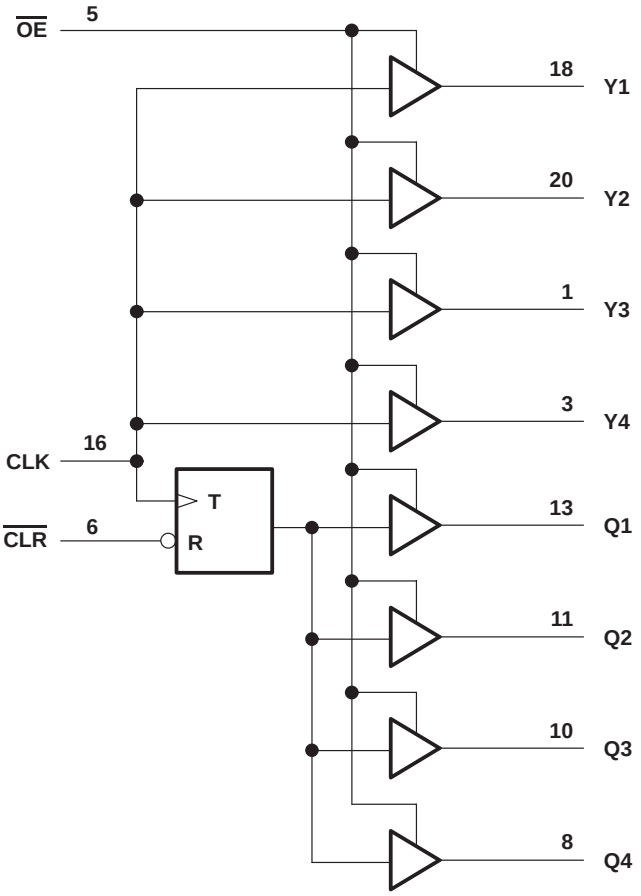
† The level of the Q outputs before the indicated steady-state input conditions were established

logic symbol†



† This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

logic diagram (positive logic)



absolute maximum ratings over operating free-air temperature range (unless otherwise noted)‡

Supply voltage range, V_{CC} . . . . . –0.5 V to 7 V
Input voltage range, V_I (see Note 1) . . . . . –0.5 V to 7 V
Voltage range applied to any output in the high state or power-off state,
V_O (see Note 1) . . . . . –0.5 V to V_{CC} + 0.5 V
Current into any output in the low state, I_O . . . . . 96 mA
Input clamp current, I_{IK} (V_I < 0) . . . . . –18 mA
Maximum power dissipation at T_A = 55°C (in still air) (see Note 2) . . . . . 1.6 W
Storage temperature range, T_{stg} . . . . . –65°C to 150°C

‡ Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
2. The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils. For more information, refer to the *Package Thermal Considerations* application note in the 1994 *ABT Advanced BiCMOS Technology Data Book*, literature number SCBD002B.

recommended operating conditions (see Note 3)

		MIN	MAX	UNIT
V_{CC}	Supply voltage	4.75	5.25	V
V_{IH}	High-level input voltage	2		V
V_{IL}	Low-level input voltage		0.8	V
V_I	Input voltage	0	V_{CC}	V
I_{OH}	High-level output current		–48	mA
I_{OL}	Low-level output current		48	mA
f_{clock}	Input clock frequency		80	MHz
T_A	Operating free-air temperature	–40	85	°C

NOTE 3: Unused pins (input or I/O) must be held high or low to prevent them from floating.

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS		MIN	TYP†	MAX	UNIT
V_{IK}	V_{CC} = 4.75 V, I_I = –18 mA				–1.2	V
V_{OH}	V_{CC} = 4.75 V, I_{OH} = – 32 mA		3.75			V
V_{OL}	V_{CC} = 4.75 V, I_{OL} = 32 mA				0.55	V
I_{IH}	V_{CC} = 5.25 V, V_I = 2.7 V				50	µA
I_{IL}	V_{CC} = 5.25 V, V_I = 0.5 V				–50	µA
I_{OZ}	V_{CC} = 5.25 V, V_O = V_{CC} or GND				±50	µA
I_{CC}	V_{CC} = 5.25 V, V_I = V_{CC} or GND, I_O = 0	Outputs high			70	mA
		Outputs low			85	
		Outputs disabled			70	
C_i	V_I = 2.5 V or 0.5 V			3		pF
C_o	V_O = VCC or GND			10		pF

† All typical values are at V_{CC} = 5 V, T_A = 25°C.

timing requirements over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

			MIN	MAX	UNIT
f_{clock}	Clock frequency			80	MHz
t_w	Pulse duration	$\overline{CLR}$ low	4		ns
		CLK low	4		
		CLK high	4		
t_{su}	Setup time, $\overline{CLR}$ inactive before CLK↑		2		ns
	Clock duty cycle		40%	60%	

switching characteristics over recommended ranges of supply voltage and operating free-air temperature, C_L = 50 pF (unless otherwise noted) (see Note 4 and Figures 1 and 2)

PARAMETER	FROM (INPUT)	TO (OUTPUT)	MIN	TYP†	MAX	UNIT
f_{max}			80			MHz
t_{PLH}	CLK	Any Y or Q	4		9	ns
t_{PHL}			4		9	
t_{PHL}	$\overline{CLR}$	Any Q	4		10	ns
t_{PZH}	$\overline{OE}$	Any Y or Q	3		7	ns
t_{PZL}			3		7	
t_{PHZ}	$\overline{OE}$	Any Y or Q	2		7	ns
t_{PLZ}			2		7	
$t_{sk(o)}$	CLK↑	Y↑			0.75	ns
		Q↑			0.9	
		Y↑ and Q↑			0.9	
t_r				0.9		ns
t_f				0.7		ns

† All typical values are at V_{CC} = 5 V, T_A = 25°C.

NOTE 4: All specifications are valid only for all outputs switching.

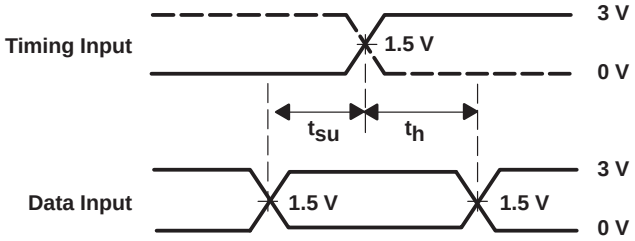
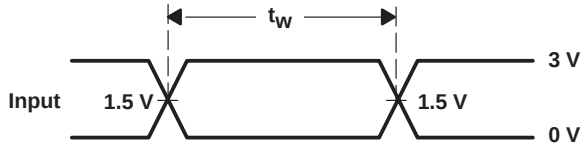
t_{PHZ}/t_{PZH}	Open

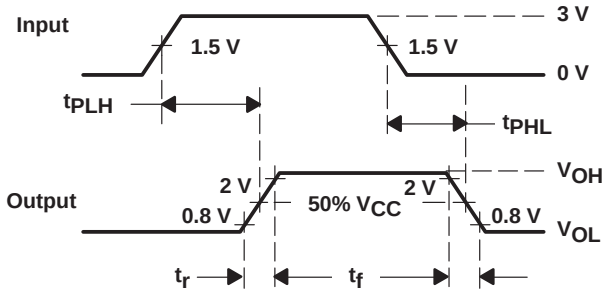
LOAD CIRCUIT



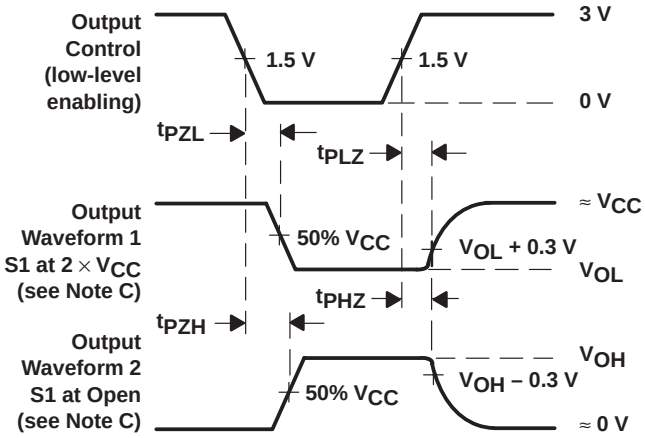
VOLTAGE WAVEFORMS



VOLTAGE WAVEFORMS



VOLTAGE WAVEFORMS

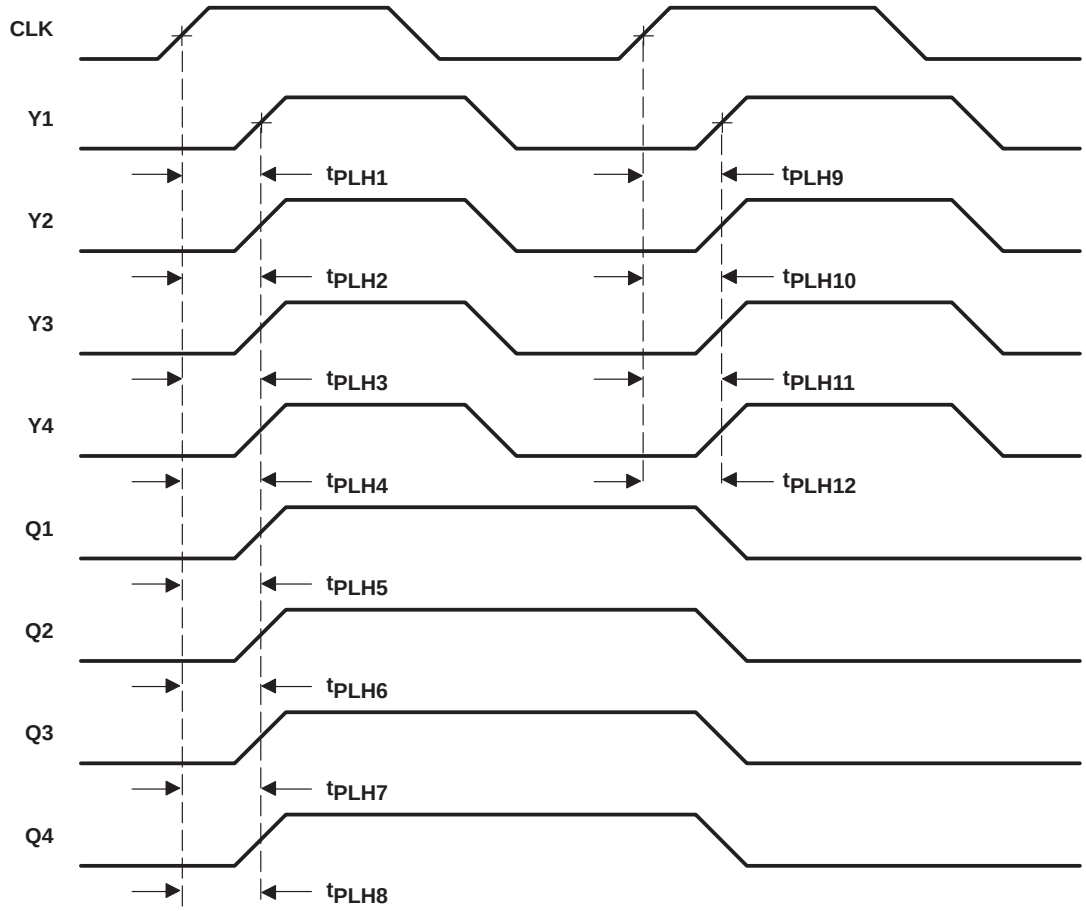


VOLTAGE WAVEFORMS

NOTES: A. C_L includes probe and jig capacitance.
B. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω, t_r ≤ 2.5 ns, t_f ≤ 2.5 ns.
C. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
D. The outputs are measured one at a time with one transition per measurement.

Figure 1. Load Circuit and Voltage Waveforms

PARAMETER MEASUREMENT INFORMATION



NOTES: A. Output skew, $t_{sk(o)}$, from CLK↑ to Y↑, is calculated as the greater of the difference between the fastest and slowest of t_{PLHn} (n = 1, 2, 3, 4) or t_{PLHn} (n = 9, 10, 11, 12).

B. Output skew, $t_{sk(o)}$, from CLK↑ to Q↑, is calculated as the greater of the difference between the fastest and slowest of t_{PLHn} (n = 5, 6, 7, 8).

C. Output skew, $t_{sk(o)}$, from CLK↑ to Y↑ and Q↑, is calculated as the greater of the difference between the fastest and slowest of t_{PLHn} (n = 1, 2, . . . , 8).

Figure 2. Waveforms for Calculation of $t_{sk(o)}$

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
