

LM27 SOT-23, $\pm 3^{\circ}\text{C}$ Accurate, 120°C - 150°C Factory Preset Thermostat

Check for Samples: [LM27](#)

FEATURES

- Internal Comparator with Pin Selectable 2°C or 10°C Hysteresis
- No External Components Required
- Open-drain or Push-pull Digital Output; Supports CMOS Logic Levels
- Internal Temperature Sensor with V_{TEMP} Output Pin
- V_{TEMP} Output Allows After-assembly System Testing
- Internal Voltage Reference and DAC for Trip-point Setting
- Currently Available in 5-pin SOT-23 Plastic Package
- Excellent Power Supply Noise Rejection

APPLICATIONS

- Microprocessor Thermal Management
- Appliances
- Portable Battery Powered Systems
- Fan Control
- Industrial Process Control
- HVAC Systems
- Electronic System Protection

KEY SPECIFICATIONS

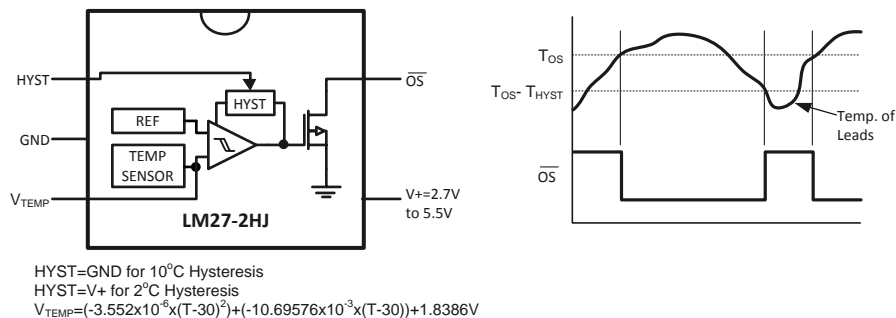

- Power Supply Voltage 2.7V to 5.5V
- Power Supply Current $40\mu\text{A}$ (Max), $15\mu\text{A}$ (Typ)
- Hysteresis Temperature 2°C or 10°C (Typ)
- Temperature Trip Point Accuracy $\pm 3^{\circ}\text{C}$ (Max)

DESCRIPTION

The LM27 is a precision, single digital-output, low-power thermostat comprised of an internal reference, DAC, temperature sensor and comparator. Utilizing factory programming, it can be manufactured with different trip points as well as different digital output functionality. The trip point (T_{OS}) can be preset at the factory to any temperature in the range of $+120^{\circ}\text{C}$ to $+150^{\circ}\text{C}$ in 1°C increments. The LM27 has one digital output ($\text{OS}/\overline{\text{OS}}/\text{US}/\overline{\text{US}}$), one digital input (HYST) and one analog output (V_{TEMP}). The digital output stage can be preset as either open-drain or push-pull. In addition, it can be factory programmed to be active HIGH or LOW. The digital output can be factory programmed to indicate an over temperature shutdown event (OS or $\overline{\text{OS}}$) or an under temperature shutdown event (US or $\overline{\text{US}}$). When preset as an overtemperature shutdown (OS) it will go LOW to indicate that the die temperature is over the internally preset T_{OS} and go HIGH when the temperature goes below ($T_{\text{OS}} - T_{\text{HYST}}$). Similarly, when preprogrammed as an undertemperature shutdown (US) it will go HIGH to indicate that the temperature is below T_{US} and go LOW when the temperature is above ($T_{\text{US}} + T_{\text{HYST}}$). The typical hysteresis, T_{HYST} , can be set to 2°C or 10°C and is controlled by the state of the HYST pin. A V_{TEMP} analog output provides a voltage that is proportional to temperature and has a $-10.7\text{mV}/^{\circ}\text{C}$ output slope.

Currently, there are several standard parts available, see [Table 1](#). For other part options, contact a Texas Instruments Distributor or Sales Representative for information on minimum order qualification. The LM27 is currently available in a 5-lead SOT-23 package.

Table 1. Summary Table of Trip Point and Output Function Capabilities of Released Parts⁽¹⁾

Orderable Device	Trip Point Temperature (°C)	Digital Output Function
LM27CIM5-ZHJ	120	Active-Low, Open-Drain, \overline{OS} output
LM27CIM5-1HJ	130	Active-Low, Open-Drain, \overline{OS} output
LM27CIM5-2HJ	140	Active-Low, Open-Drain, \overline{OS} output

(1) Other device options have not been released to market, contact Texas Instruments for volume and other requirements for release.

Connection Diagram

PIN DESCRIPTIONS

Pin Number	Pin Name	Function	Connection
1	HYST	Hysteresis control, digital input	GND for 10°C or V^+ for 2°C
2	GND	Ground, connected to the back side of the die through lead frame.	System GND
3	V_{TEMP}	Analog output voltage proportional to temperature	Leave floating or connect to a high impedance node.
4	V^+	Supply input	2.7V to 5.5V with a 0.1µF bypass capacitor. For PSRR information see NOISE CONSIDERATIONS .
5 ⁽¹⁾	\overline{OS}	Overtemperature Shutdown open-drain active low thermostat digital output	Controller interrupt, system or power supply shutdown; pull-up resistor $\geq 10k\Omega$
	OS	Overtemperature Shutdown totem-pull active high thermostat digital output	Controller interrupt, system or power supply shutdown
	\overline{US}	Undertemperature Shutdown open-drain active low thermostat digital output	System or power supply shutdown; pull-up resistor $\geq 10k\Omega$
	US	Undertemperature Shutdown totem-pull active high thermostat digital output	System or power supply shutdown

(1) Pin 5 functionality and trip point setting are programmed during LM27 manufacture.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings⁽¹⁾

Input Voltage			6.0V
Input Current at any pin ⁽²⁾			5mA
Package Input Current ⁽²⁾			20mA
Package Dissipation at T _A = 25°C ⁽³⁾			500mW
Soldering Information ⁽⁴⁾	SOT23 Package	Vapor Phase (60 seconds)	215°C
		Infrared (15 seconds)	220°C
Storage Temperature			−65°C to + 150°C
ESD Susceptibility ⁽⁵⁾	Human Body Model		2500V
	Machine Model		250V

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the Electrical Characteristics. The specified specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (2) When the input voltage (V_I) at any pin exceeds the power supply (V_I < GND or V_I > V⁺), the current at that pin should be limited to 5mA. The 20mA maximum package input current rating limits the number of pins that can safely exceed the power supplies with an input current of 5mA to four. Under normal operating conditions the maximum current that pins 2, 4 or 5 can handle is limited to 5mA each.
- (3) The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{Jmax} (maximum junction temperature), θ_{JA} (junction to ambient thermal resistance) and T_A (ambient temperature). The maximum allowable power dissipation at any temperature is $P_D = (T_{Jmax} - T_A) / \theta_{JA}$ or the number given in the Absolute Maximum Ratings, whichever is lower. For this device, T_{Jmax} = 150°C. For this device the typical thermal resistance (θ_{JA}) of the different package types when board mounted refer to [Table 2](#)
- (4) See <http://www.ti.com/packaging> for other recommendations and methods of soldering surface mount devices.
- (5) The human body model is a 100pF capacitor discharge through a 1.5k Ω resistor into each pin. The machine model is a 200pF capacitor discharged directly into each pin.

Table 2.

Package Type	θ_{JA}
SOT23-5, DBV	250°C/W

Operating Ratings⁽¹⁾

Specified Temperature Range	T _{MIN} ≤ T _A ≤ T _{MAX}
LM27CIM	–40°C ≤ T _A ≤ +150°C
Positive Supply Voltage (V ⁺)	+2.7V to +5.5V
Maximum V _{OUT}	+5.5V

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the Electrical Characteristics. The specified specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.

LM27 Electrical Characteristics

The following specifications apply for $V^+ = 2.7V_{DC}$ to $5.5V_{DC}$, and V_{TEMP} load current = $0\mu A$ unless otherwise specified.

Boldface limits apply for $T_A = T_J = T_{MIN}$ to T_{MAX} ; all other limits $T_A = T_J = 25^\circ C$ unless otherwise specified.

Symbol	Parameter	Conditions	Typical ⁽¹⁾	LM27CIM Limits ⁽²⁾	Units (Limits)
Temperature Sensor					
	Trip Point Accuracy (Includes V_{REF} , DAC, Comparator Offset, and Temperature Sensitivity errors)	$+120^\circ C < T_A < +150^\circ C$		± 3	$^\circ C$ (max)
	Trip Point Hysteresis	HYST = GND	10		$^\circ C$
		HYST = V^+	2		$^\circ C$
	V_{TEMP} Output Temperature Sensitivity		-10.82		mV/ $^\circ C$
	V_{TEMP} Temperature Sensitivity Error to Equation: $V_O = (-3.552 \times 10^{-6} \times (T-30)^2 + (-10.695 \times 10^{-3} \times (T-30)) + 1.8386V$ (1)	$-30^\circ C \leq T_A \leq 150^\circ C$, $2.7V \leq V^+ \leq 5.5V$		± 3	$^\circ C$ (max)
		$-55^\circ C \leq T_A \leq 150^\circ C$, $4.5V \leq V^+ \leq 5.5V$		± 3	$^\circ C$ (max)
		$T_A = 25^\circ C$		± 2.5	$^\circ C$ (max)
	V_{TEMP} Load Regulation	Source $\leq 1 \mu A$	0.070		mV
		Sink $\leq 40 \mu A$		0.7	mV (max)
	V_{TEMP} Line Regulation	$+2.7V \leq V^+ \leq +5.5V$, $-30^\circ C \leq T_A \leq +120^\circ C$	-0.2		mV/V
I_S	Supply Current		15	22 40	μA (max) μA (max)
Digital Output and Input					
$I_{OUT("1")}$	Logical "1" Output Leakage Current ⁽³⁾	$V^+ = +5.0V$	0.001	1	μA (max)
$V_{OUT("0")}$	Logical "0" Output Voltage	$I_{OUT} = +1.2mA$ and $V^+ \geq 2.7V$; $I_{OUT} = +3.2mA$ and $V^+ \geq 4.5V$ ⁽⁴⁾		0.4	V (max)
$V_{OUT("1")}$	Logical "1" Push-Pull Output Voltage	$I_{SOURCE} = 500\mu A$, $V^+ \geq 2.7V$		$0.8 \times V^+$	V (min)
		$I_{SOURCE} = 800\mu A$, $V^+ \geq 4.5V$		$V^+ - 1.5$	V (min)
V_{IH}	HYST Input Logical "1" Threshold Voltage			$0.8 \times V^+$	V (min)
V_{IL}	HYST Input Logical "0" Threshold Voltage			$0.2 \times V^+$	V (max)

(1) Typicals are at $T_J = T_A = 25^\circ C$ and represent most likely parametric norm.

(2) Limits are ensured to AOQL (Average Outgoing Quality Level).

(3) The $1\mu A$ limit is based on a testing limitation and does not reflect the actual performance of the part. Expect to see a doubling of the current for every $15^\circ C$ increase in temperature. For example, the $1nA$ typical current at $25^\circ C$ would increase to $16nA$ at $85^\circ C$.

(4) Care should be taken to include the effects of self heating when setting the maximum output load current. The power dissipation of the LM27 would increase by $1.28mW$ when $I_{OUT}=3.2mA$ and $V_{OUT}=0.4V$. With a thermal resistance of $250^\circ C/W$, this power dissipation would cause an increase in the die temperature of about $0.32^\circ C$ due to self heating. Self heating is not included in the trip point accuracy specification.

Part Number Template

The series of digits labeled xyz in the part number LM27CIM-xyz, describe the set point value and the function of the output as follows:

The place holders xy describe the set point temperature as shown in the following table.

x (10x)	y (1x)	Temperature (°C)
-	H	0
-	J	1
-	K	2
-	L	3
-	N	4
-	P	5
-	R	6
-	S	7
-	T	8
-	V	9
Z	-	12
1	-	13
2	-	14
3	-	15

The value of z describes the assignment/function of the output as shown in the following table:

Active-Low/High	Open-Drain/ Push-Pull	\overline{OS}/US	Value of z	Digital Output Function
0	0	0	J	Active-Low, Open-Drain, \overline{OS} output
0	0	1	K	Active-Low, Open-Drain, \overline{US} output
1	1	0	L	Active-High, Push-Pull, OS output
1	1	1	N	Active-High, Push-Pull, US output

For example:

- the part number LM27CIM5-2SJ has $T_{OS} = 147^{\circ}\text{C}$, and programmed as an active-low open-drain overtemperature shutdown output.
- the part number LM27CIM5-ZLN has $T_{US} = 123^{\circ}\text{C}$, and programmed as an active-high, push-pull undertemperature shutdown output.

Active-high open-drain and active-low push-pull options are available, please contact Texas Instruments for more information.

Note: Currently, there are several standard parts available, see [Table 1](#). For other part options, contact a Texas Instruments Distributor or Sales Representative for information on minimum order qualification

FUNCTIONAL DESCRIPTION

LM27 OPTIONS — Output Pin Options Block Diagrams

Figure 1. LM27-__J

Figure 2. LM27-__K

Figure 3. LM27-__L

Figure 4. LM27-__N

The LM27 can be factory programmed to have a trip point anywhere in-between 120°C to 150°C.

Applications Hints

AFTER-ASSEMBLY PCB TESTING

The LM27's V_{TEMP} output allows after-assembly PCB testing by following a simple test procedure. Simply measuring the V_{TEMP} output voltage will verify that the LM27 has been assembled properly and that its temperature sensing circuitry is functional. The V_{TEMP} output has very weak drive capability that can be overdriven by 1.5mA. Therefore, one can simply force the V_{TEMP} voltage to cause the digital output to change state, thereby verifying that the comparator and output circuitry function after assembly. Here is a sample test procedure that can be used to test the LM27CIM5X-2HJ which has a 140°C trip point.

1. Turn on V^+ and measure V_{TEMP} . Then calculate the temperature reading of the LM27 using the equation:

$$V_O = (-3.552 \times 10^{-6} \times (T-30)^2) + (-10.69576 \times 10^{-3} \times (T-30)) + 1.8386V \quad (2)$$

or

$$T = -1475.49 + \sqrt{2.2668 \times 10^6 + \frac{1.8386 - V_{TEMP}}{3.552 \times 10^{-6}}} \quad (3)$$

2. Verify that the temperature measured in step one is within ($\pm 3^\circ\text{C}$ + error of reference temperature sensor) of the ambient/board temperature. The ambient/board temperature (reference temperature) should be measured using an extremely accurate calibrated temperature sensor, which is in close proximity to and mounted on the same PCB as the LM27 perhaps even touching the GND lead of the LM27 if possible. The LM27 will sense the board temperature not the ambient temperature (see [MOUNTING CONSIDERATIONS](#))
3.
 - (a) Observe that \overline{OS} is high.
 - (b) Drive V_{TEMP} to ground.
 - (c) Observe that \overline{OS} is now low.
 - (d) Release the V_{TEMP} pin.
 - (e) Observe that \overline{OS} is now high.
4.
 - (a) Observe that \overline{OS} is high.
 - (b) Drive V_{TEMP} voltage down gradually.
 - (c) When \overline{OS} goes low, note the V_{TEMP} voltage.
 - (d) $V_{TEMP}^{Trig} = V_{TEMP}$ at \overline{OS} trigger (HIGH->LOW)
 - (e) Calculate T_{trig} using [Equation 3](#).

5.
 - (a) Gradually raise V_{TEMP} until OS goes HIGH. Note V_{TEMP} .
 - (b) Calculate T_{HYST} using Equation 3.

V_{TEMP} LOADING

The V_{TEMP} output has very weak drive capability (1 μ A source, 40 μ A sink). So care should be taken when attaching circuitry to this pin. Capacitive loading may cause the V_{TEMP} output to oscillate. Simply adding a resistor in series as shown in Figure 6 will prevent oscillations from occurring. To determine the value of the resistor follow the guidelines given in Table 3. The same value resistor will work for either placement of the resistor. If an additional capacitive load is placed directly on the LM27 output, rather than across C_{LOAD} , it should be at least a factor of 10 smaller than C_{LOAD} .

Table 3. Resistive compensation for capacitive loading of V_{TEMP}

C_{LOAD}	R (Ω)
≤ 100 pF	0
1nF	8200
10nF	3000
100nF	1000
≥ 1 μ F	430

Resistor placement for capacitive loading compensation of V_{TEMP}

Figure 5. R in series with capacitor

Figure 6. R in series with signal path

NOISE CONSIDERATIONS

The LM27 has excellent power supply noise rejection. Listed below is a variety of signals used to test the LM27 power supply rejection. False triggering of the output was not observed when these signals were coupled into the V+ pin of the LM27.

- square wave 400kHz, 1Vp-p
- square wave 2kHz, 200mVp-p
- sine wave 100Hz to 1MHz, 200mVp-p

Testing was done while maintaining the temperature of the LM27 one degree centigrade away from the trip point with the output not activated.

MOUNTING CONSIDERATIONS

The LM27 can be applied easily in the same way as other integrated-circuit temperature sensors. It can be glued or cemented to a surface. The temperature that the LM27 is sensing will be within about +0.06°C of the surface temperature to which the LM27's leads are attached to.

This presumes that the ambient air temperature is almost the same as the surface temperature; if the air temperature were much higher or lower than the surface temperature, the actual temperature measured would be at an intermediate temperature between the surface temperature and the air temperature.

To ensure good thermal conductivity, the backside of the LM27 die is directly attached to the GND pin (pin 2). The temperatures of the lands and traces to the other leads of the LM27 will also affect the temperature that is being sensed.

Alternatively, the LM27 can be mounted inside a sealed-end metal tube, and can then be dipped into a bath or screwed into a threaded hole in a tank. As with any IC, the LM27 and accompanying wiring and circuits must be kept insulated and dry, to avoid leakage and corrosion. This is especially true if the circuit may operate at cold temperatures where condensation can occur. Printed-circuit coatings and varnishes such as Humiseal and epoxy paints or dips are often used to ensure that moisture cannot corrode the LM27 or its connections.

The junction to ambient thermal resistance (θ_{JA}) is the parameter used to calculate the rise of a part's junction temperature due to its power dissipation. For the LM27 the equation used to calculate the rise in the die junction temperature is as follows:

$$T_J = T_A + \theta_{JA}(V^+ I_Q + (V^+ - V_{TEMP}) I_{L_TEMP} + V_{DO} I_{DO}) \quad (4)$$

where T_A is the ambient temperature, V^+ is the power supply voltage, I_Q is the quiescent current, I_{L_TEMP} is the load current on the V_{TEMP} output, V_{DO} is the voltage on the digital output, and I_{DO} is the load current on the digital output. Since the LM27's junction temperature is the actual temperature being measured, care should be taken to minimize the load current that the LM27 is required to drive.

The tables shown in [Table 4](#) summarize the thermal resistance for different conditions and the rise in die temperature of the LM27 without any loading on V_{TEMP} and a 10k pull-up resistor on an open-drain digital output with a 5.5V power supply.

Table 4. Thermal resistance (θ_{JA}) and temperature rise due to self heating ($T_J - T_A$)

	SOT23-5 no heat sink		SOT23-5 small heat sink	
	θ_{JA} (°C/W)	$T_J - T_A$ (°C)	θ_{JA} (°C/W)	$T_J - T_A$ (°C)
Still Air	250	0.11	TBD	TBD
Moving Air	TBD	TBD	TBD	TBD

Typical Applications

The fan's control pin has internal pull-up. The 10k pull-down sets a slow fan speed. When the output of the LM27 goes low, the fan will speed up.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

 - D. Falls within JEDEC MO-178 Variation AA.

DBV (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
 - D. Publication IPC-7351 is recommended for alternate designs.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
