

## SN5545xB, SN7545xB Dual-Peripheral Drivers for High-Current, High-Speed Switching

### 1 Features

- Characterized for Use to 300 mA
- High-Voltage Outputs up to 30 V
- No Output Latch-Up at 20 V (After Conducting 300 mA)
- High-Speed Switching
- Open-Collector Outputs
- Circuit Flexibility for Varied Applications
- TTL-Compatible Diode-Clamped Inputs
- Standard Supply Voltages

### 2 Applications

- High-Speed Logic Buffers
- Power Drivers
- Lamp Drivers
- LED Drivers
- Line Drivers
- Memory Drivers

### 3 Description

The SN5545xB and SN7545xB devices are dual-peripheral drivers designed for use in systems that employ TTL logic. This family is functionally interchangeable with and replaces the SN75450 family and the SN75450A family devices manufactured previously. The speed of the devices is equal to that of the SN75450 family, and the parts are designed to ensure freedom from latch-up. Diode-clamped inputs simplify circuit design.

The SNx5451B, SNx5452B, SNx5453B, and SNx5454B devices are dual peripheral AND, NAND, OR, and NOR drivers, respectively (assuming positive logic), with the output of the logic gates internally connected to the bases of the npn output transistors.

The SN5545xB drivers are characterized for operation over the full military range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN7545xB drivers are characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN7545xBP	PDIP (8)	9.81 mm x 6.35 mm
SN7545xBD	SOIC (8)	4.90 mm x 3.90 mm
SN7545xBPS	SO (8)	6.20 mm x 5.30 mm
SN5545xBJG	CDIP (8)	9.60 mm x 6.67 mm
SN5545xBFK	LCCC (20)	8.89 mm x 8.89 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 7 Specifications

### 7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT	
V <sub>CC</sub>	Supply voltage, (see <sup>(2)</sup> )		7	V	
V <sub>I</sub>	Input voltage		5.5	V	
	Inter-emitter voltage (see Note <sup>(3)</sup> )		5.5	V	
V <sub>O</sub>	Off-state output voltage		30	V	
I <sub>OK</sub>	Continuous collector or output current, (see Note <sup>(4)</sup> )		400	mA	
	Peak collector or output current, II (tw ≤ 10 ms, duty cycle ≤ 50%, see Note <sup>(5)</sup> )		500	mA	
	Continuous total power dissipation	See <a href="#">Dissipation Ratings</a>			
T <sub>A</sub>	Operating free-air temperature	SN5545xB	–55	125	°C
		SN7545xB	0	70	
	Case temperature for 60 seconds	SN5545xB FK package		260	°C
	Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds	SN5545xB JG package		100	°C
	Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	SN7545xB D or P package		260	°C
T <sub>J</sub>	Operating virtual junction temperature		150	°C	
T <sub>stg</sub>	Storage temperature	–65	150	°C	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Voltage values are with respect to network GND, unless otherwise specified.
- (3) This is the voltage between two emitters of a multiple-emitter transistor.
- (4) This value applies when the base-emitter resistance (RBE) is equal to or less than 500 Ω.
- (5) Both halves of these dual circuits may conduct rated current simultaneously; however, power dissipation averaged over a short time interval must fall within the continuous dissipation rating.

### 7.2 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT	
V <sub>CC</sub>	Supply voltage	SN5545xB	4.5	5	5.5	V
		SN7545xB	4.75	5	5.25	
V <sub>IH</sub>	High-level input voltage	2			V	
V <sub>IL</sub>	Low-level input voltage			0.8	V	
T <sub>A</sub>	Operating free-air temperature	SN5545xB	–50		125	°C
		SN7545xB	0		70	

### 7.3 Thermal Information

THERMAL METRIC <sup>(1)</sup>	SN7545xB			UNIT	
	D (SOIC)	P (PDIP)	PS (SO)		
	8 PINS	8 PINS	8 PINS		
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	122.2	63.7	119.6	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	68.4	53.6	71.5	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	62.4	40.8	68.7	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	23.2	31.1	31.6	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	62.0	40.8	67.7	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

## 7.4 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
$V_{IK}$	Input clamp voltage	$V_{CC} = \text{MIN}$ , $I_I = -12 \text{ mA}$			-1.2	-1.5	V
$V_{OL}$	Low-level output voltage	$V_{CC} = \text{MIN}$ , $V_{IL} = 0.8 \text{ V}$ , $I_{OL} = 100 \text{ mA}$	SN5545xB		0.25	0.5	V
			SN7545xB		0.25	0.4	
		$V_{CC} = \text{MIN}$ , $V_{IL} = 0.8 \text{ V}$ , $I_{OL} = 300 \text{ mA}$	SN5545xB		0.5	0.8	
			SN7545xB		0.5	0.7

			SN7545xB			100	
$I_I$	Input current at maximum input voltage	$V_{CC} = \text{MAX}$ , $V_I = 5.5 \text{ V}$				1	mA
$I_{IH}$	High-level input current	$V_{CC} = \text{MAX}$ , $V_I = 2.4 \text{ V}$				40	$\mu\text{A}$
$I_{IL}$	Low-level input current	$V_{CC} = \text{MAX}$ , $V_I = 0.4 \text{ V}$			-1	-1.6	mA
$I_{CCH}$	Supply current, outputs high	$V_{CC} = \text{MAX}$ , $V_I = 5 \text{ V}$	SNx5451B		7	11	mA
			SNx5453B		8	11	
		$V_{CC} = \text{MAX}$ , $V_I = 0 \text{ V}$	SNx5452B		11	14	
			SNx5454B		13	17	
$I_{CCL}$	Supply current, outputs low	$V_{CC} = \text{MAX}$ , $V_I = 0 \text{ V}$	SNx5451B		52	65	mA
			SNx5453B		54	68	
		$V_{CC} = \text{MAX}$ , $V_I = 5 \text{ V}$	SNx5452B		56	71	
			SNx5454B		61	79	

## 7.5 Switching Characteristics, $V_{CC} = 5 \text{ V}$ , $T_A = 25^\circ\text{C}$

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS <sup>(1)</sup>		MIN	TYP <sup>(2)</sup>	MAX	UNIT
$t_{PLH}$	Propagation delay time, low-to-high-level output	$I_O \approx 200 \text{ mA}$ , $C_L = 15 \text{ pF}$ , $R_L = 50 \Omega$ , L See <a href="#">Figure 2</a>	SNx5451B, SNx5453B		18	25	ns
			SNx5452B		26	35	
			SNx5454B		27	35	
			SNx5451B, SNx5453B		18	25	
$t_{PHL}$	Propagation delay time, high-to-low-level output	$I_O \approx 200 \text{ mA}$ , $C_L = 15 \text{ pF}$ , $R_L = 50 \Omega$ , L See <a href="#">Figure 2</a>	SNx5452B, SNx5454B		24	35	
			SNx5451B, SNx5453B		18	25	
$t_{TLH}$	Transition time, low-to-high-level output	$I_O \approx 200 \text{ mA}$ , $C_L = 15 \text{ pF}$ , $R_L = 50 \Omega$ , L See <a href="#">Figure 2</a>			5	8	
$t_{THL}$	Transition time, high-to-low-level output	$I_O \approx 200 \text{ mA}$ , $C_L = 15 \text{ pF}$ , $R_L = 50 \Omega$ , L See <a href="#">Figure 2</a>			7	12	
$V_{OH}$	High level output voltage after switching	$V_S = 20 \text{ V}$ , $I_O 9 \text{ 300 mA}$ , See <a href="#">Figure 2</a>	SN5545xB		$V_S - 6.5$		mV
			SN7545xB		$V_S - 6.5$		

(1) For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.

(2) All typical values are at  $V_{CC} = 5 \text{ V}$ ,  $T_A = 25^\circ\text{C}$ .

## 7.6 Dissipation Ratings

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25^\circ\text{C}$	$T_A = 70^\circ\text{C}$ POWER RATING	$T_A = 125^\circ\text{C}$ POWER RATING
D	725 mW	5.8 mW/ $^\circ\text{C}$	464	—
FK	1375 mW	11.0 mW/ $^\circ\text{C}$	880	275 mW
JG	1050 mW	8.4 mW/ $^\circ\text{C}$	672	210 mW
P	1000 mW	8.0 mW/ $^\circ\text{C}$	640	—

## 7.7 Typical Characteristics

NOTE A: These parameters must be measured using pulse techniques,  $t_w = 300 \mu\text{s}$ , duty cycle  $\leq 2\%$ .

Figure 1. Transistor Collector-Emitter Saturation Voltage vs Collector Current

## 8 Parameter Measurement Information

- A. The pulse generator has the following characteristics:  $\text{PRR} \leq 1 \text{ MHz}$ ,  $\text{Z}_O = 50 \Omega$ .
- B.  $C_L$  includes probe and jig capacitance.

Figure 2. Test Circuit, Complete Drivers

Parameter Measurement Information (continued)

- A. The pulse generator has the following characteristics: PRR  $\leq$  1 MHz,  $Z_O = 50 \Omega$ .
- B.  $C_L$  includes probe and jig capacitance.

Figure 3. Waveforms, Complete Drivers

- A. The pulse generator has the following characteristics: PRR  $\leq$  12.5 kHz,  $Z_O = 50 \Omega$ .
- B.  $C_L$  includes probe and jig capacitance.

Figure 4. Test Circuit for Latch-Up Test of Complete Drivers

Parameter Measurement Information (continued)

- A. The pulse generator has the following characteristics: PRR  $\le 12.5\text{ kHz}$ ,  $Z_O = 50\ \Omega$ .
- B. CL includes probe and jig capacitance.

Figure 5. Voltage Waveforms for Latch-Up Test of Complete Drivers

## 9 Detailed Description

### 9.1 Overview

The SN7545xB and SN5545xB devices provide dual-output drivers with AND, NAND, NOR, or OR logic inputs. If each logic input is set to the appropriate voltage level, then the output driver will turn on, pulling the driver to ground and allowing current to flow.

### 9.3 Feature Description

The SNx5451B devices allow for high current driving up to 300 mA. This family of devices have AND, NAND, OR, or NOR input logic gates to allow for a wide variety of applications. The SN7545xB devices are rated for a commercial temperature range of 0°C to 70°C, and the SN5545xB devices are rated for a military temperature range of –65°C to 125°C.

### 9.4 Device Functional Modes

Table 1, Table 2, Table 3, and Table 4 list the functional modes of the SNx545xB.

## 10 Application and Implementation

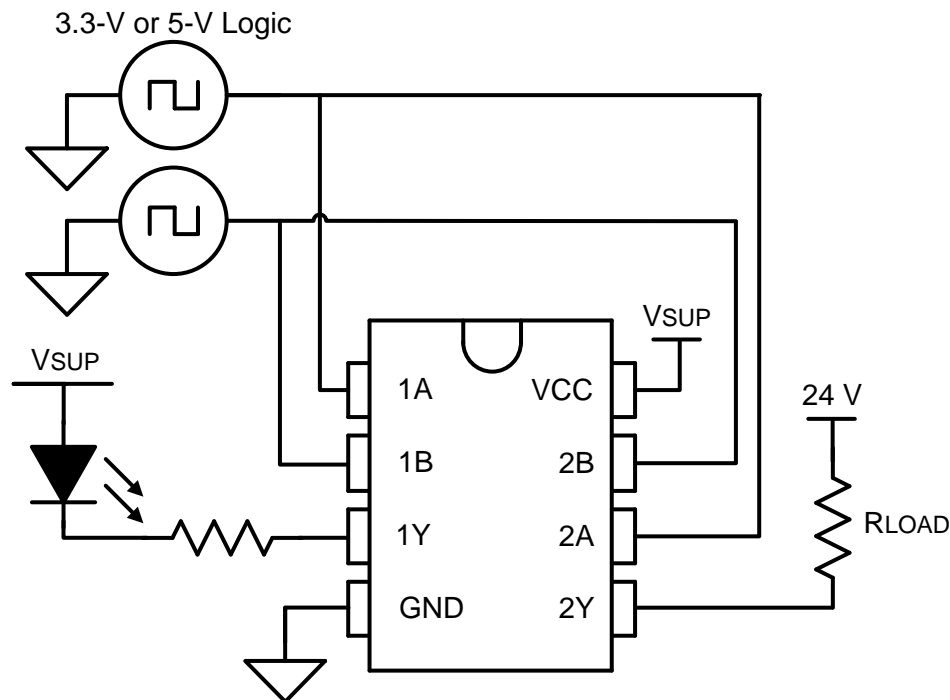

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 10.1 Application Information

Typically the SN75451B device drives a high-voltage or high-current peripheral from an MCU or logic device that cannot tolerate these conditions. The following design is a common application of the SN75451B device, driving an LED using one channel and a high voltage peripheral using the other. In this configuration, the LED will turn on whenever the high voltage peripheral is on.

### 10.2 Typical Application

Copyright © 2016, Texas Instruments Incorporated

Figure 18. SN75451B Driving an LED and a High Voltage Peripheral

#### 10.2.1 Design Requirements

Each of the inputs to the logic gate should never float. If one of the inputs is floating, then the logic gate could be in an unknown state. Be sure to connect ground or  $V_{CC}$  to any unused input channels.

#### 10.2.2 Detailed Design Procedure

- Recommended Input Conditions:
  - For specified high and low levels, see  $V_{IH}$  and  $V_{IL}$  in [Recommended Operating Conditions](#).
  - The input voltage must not exceed the  $V_I$  specified in [Absolute Maximum Ratings](#).
- Recommended Output Conditions:
  - It is recommended that the load current not exceed 300 mA.
  - The load current must never exceed the  $I_{OK}$  noted in [Absolute Maximum Ratings](#).

## Typical Application (continued)

### 10.2.3 Application Curves

## 11 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in [Recommended Operating Conditions](#). The  $V_{CC}$  pin should have a bypass capacitor to prevent power disturbance. A 0.1- $\mu\text{F}$  capacitor is suitable for this device.

## 12 Layout

### 12.1 Layout Guidelines

Thin traces can be used on the input due to the low-current logic that is used to drive the SNx545xB devices. Take care to separate the input channels to eliminate crosstalk. These traces are recommended for the output to be able to drive high currents. Be sure to connect ground or  $V_{CC}$  to any unused input channels, and use a bypass capacitor on the  $V_{CC}$  pin to prevent any power glitches.

### 12.2 Layout Example

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
