LM160/LM360 High Speed Differential Comparator

Check for Samples: LM160, LM360

FEATURES

- **Ensured high speed: 20 ns max**
- **Tight delay matching on both outputs**
- **Complementary TTL outputs**
- **High input impedance**
- **Low speed variation with overdrive variation**
- **Fan-out of 4**
- **Low input offset voltage**
- **Series 74 TTL compatible**

DESCRIPTION

The LM160/LM360 is a very high speed differential input, complementary TTL output voltage comparator with improved characteristics over the µA760/µA760C, for which it is a pin-for-pin replacement. The device has been optimized for greater speed, input impedance and fan-out, and lower input offset voltage. Typically delay varies only 3 ns for overdrive variations of 5 mV to 400 mV.
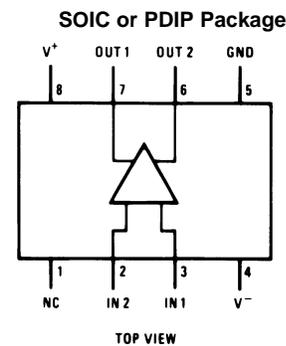

Complementary outputs having minimum skew are provided. Applications involve high speed analog to digital convertors and zero-crossing detectors in disk file systems.

CONNECTION DIAGRAMS
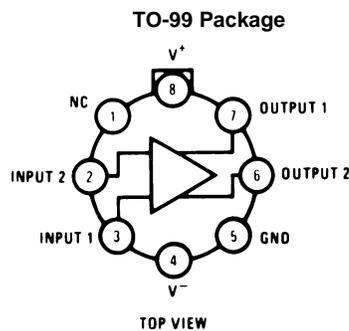

Figure 1. Package Number LMC0008C [(1)]

Figure 2. Package Number D0008A or P0008E

(1) Also available in SMD# 5962-8767401

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Absolute Maximum Ratings [1] [2]

Positive Supply Voltage		+8V
Negative Supply Voltage		−8V
Peak Output Current		20 mA
Differential Input Voltage		±5V
Input Voltage		$V^+ \geq V_{IN} \geq V^-$
ESD Tolerance [3]		1600V
Operating Temperature Range	LM160	−55°C to +125°C
	LM360	0°C to +70°C
Storage Temperature Range		−65°C to +150°C
Lead Temperature	(Soldering, 10 sec.)	260°C
Soldering Information		
PDIP Package	Soldering (10 seconds)	260°C
SOIC Package	Vapor Phase (60 seconds)	215°C
	Infrared (15 seconds)	220°C
See AN-450 "Surface Mounting Methods and Their Effect on Product Reliability" for other methods of soldering surface mount devices.		

(1)   The device may be damaged if used beyond the maximum ratings.
(2)   Refer to RETS 160X for LM160H, LM160J-14 and LM160J military specifications.
(3)   Human body model, 1.5 kΩ in series with 100 pF.

Electrical Characteristics

($T_{MIN} \leq T_A \leq T_{MAX}$)

| Parameter	Conditions	Min	Typ	Max	Units
Operating Conditions					
Supply Voltage V_{CC}^+		4.5	5	6.5	V
Supply Voltage V_{CC}^-		−4.5	−5	−6.5	V
Input Offset Voltage	$R_S \leq 200\Omega$		2	5	mV
Input Offset Current			0.5	3	µA
Input Bias Current			5	20	µA
Output Resistance (Either Output)	$V_{OUT} = V_{OH}$		100		Ω
Response Time	T_A = 25°C, V_S = ±5V [1] [2]		13	25	ns
	T_A = 25°C, V_S = ±5V [3] [2]		12	20	ns
	T_A = 25°C, V_S = ±5V [4] [2]		14		ns
Response Time Difference between Outputs					
(t_{pd} of $+V_{IN1}$) − (t_{pd} of $−V_{IN2}$)	T_A = 25°C [1] [2]		2		ns
(t_{pd} of $+V_{IN2}$) − (t_{pd} of $−V_{IN1}$)	T_A = 25°C [1] [2]		2		ns
(t_{pd} of $+V_{IN1}$) − (t_{pd} of $+V_{IN2}$)	T_A = 25°C [1] [2]		2		ns
(t_{pd} of $−V_{IN1}$) − (t_{pd} of $−V_{IN2}$)	T_A = 25°C [1] [2]		2		ns
Input Resistance	f = 1 MHz		17		kΩ
Input Capacitance	f = 1 MHz		3		pF
Average Temperature Coefficient of Input Offset Voltage	$R_S = 50\Omega$		8		µV/°C
Average Temperature Coefficient of Input Offset Current			7		nA/°C
Common Mode Input Voltage Range	V_S = ±6.5V	±4	±4.5		V
Differential Input Voltage Range		±5			V
Output High Voltage (Either Output)	I_{OUT} = −320 µA, V_S = ±4.5V	2.4	3		V
Output Low Voltage (Either Output)	I_{SINK} = 6.4 mA		0.25	0.4	V
Positive Supply Current	V_S = ±6.5V		18	32	mA
Negative Supply Current	V_S = ±6.5V		−9	−16	mA

(1)   Response time measured from the 50% point of a 30 mVp-p 10 MHz sinusoidal input to the 50% point of the output.
(2)   Measurements are made in AC Test Circuit, Fanout = 1
(3)   Response time measured from the 50% point of a 2 Vp-p 10 MHz sinusoidal input to the 50% point of the output.
(4)   Response time measured from the start of a 100 mV input step with 5 mV overdrive to the time when the output crosses the logic threshold.

[1] The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

[2] Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

[3] MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

[4] There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

[5] Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

[6] Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
