

## SN65LVEL11

SLLS927-DECEMBER 2008

# 3.3 V ECL 1:2 Fanout Buffer

### **FEATURES**

- 1:2 ECL Fanout Buffer
- Operating Range
  - PECL V<sub>CC</sub> = 3.0 V to 3.8 V With V<sub>EE</sub> = 0 V
  - NECL:  $V_{CC} = 0$  V with  $V_{EE} = -3.0$ to -3.8V
- 5 ps Skew Between Outputs
- Support for Clock Frequencies > 2.0 GHz
- 265 ps Typical Propagation Delay
- Deterministic Output Value for Open Input Conditions or When Inputs = V<sub>EE</sub>
- Built-in Temperature Compensation
- Drop in Compatible to MC10LVEL11, MC100LVEL11
- Built-In Input Pull Down Resistors

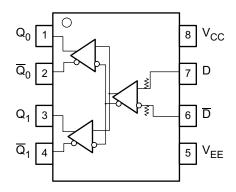

### **APPLICATIONS**

- Data and Clock Transmission Over Backplane
- Signaling Level Conversion

## DESCRIPTION

The SN65LVEL11 is a fully differential 1:2 ECL fanout buffer. The device includes circuitry to maintain a known logic level when inputs are in open condition. The SN65LVEL11 is functionally equivalent to SN65EL11 with improved performance. The SN65LVEL11 is housed in an industry standard SOIC-8 package and is also available in the TSSOP-8 package option.

#### PINOUT ASSIGNMENT

#### Table 1. Pin Description

PIN	FUNCTION
D, D	PECL/ECL data inputs
$Q_0, \overline{Q}_0, Q_1, \overline{Q}_1$	PECL/ECL outputs
V <sub>CC</sub>	Positive supply
V <sub>EE</sub>	Negative supply

#### **ORDERING INFORMATION**<sup>(1)</sup>

PART NUMBER	PART MARKING	PACKAGE	LEAD FINISH
SN65LVEL11D	SN65LVEL11	SOIC	NiPdAu
SN65LVEL11DGK	SN65LVEL11	SOIC-TSSOP	NiPdAu

(1) Leaded device options not initially available. Contact TI sales representative for further details.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

#### SLLS927-DECEMBER 2008

www.ti.com

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

#### **ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>**

PARAMETER	CONDITION	VALUE	UNIT		
Absolute PECL mode supply voltage, $V_{CC}$	V <sub>EE</sub> = 0 V	6	V		
Absolute NECL mode power supply, $V_{EE}$	$V_{CC} = 0 V$	-6	V		
PECL mode input voltage	$V_{EE} = 0 V; V_1 \leq VCC$	6	V		
NECL mode input voltage	$V_{CC} = 0 V; V_I \ge V_{EE}$	-6	V		
Output ourrent	Continuous	50	~ ^		
Output current	Surge	100	— mA		
Operating temperature range	ing temperature range -40 to 85				
Storage temperature range	-65 to 150	°C			

(1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### POWER DISSIPATION RATINGS

PACKAGE	CIRCUIT BOARD MODEL	POWER RATING T <sub>A</sub> < 25°C (mW)	THERMAL RESISTANCE, JUNCTION TO AMBIENT NO AIRFLOW	DERATING FACTOR T <sub>A</sub> > 25°C (mW/°C)	POWER RATING T <sub>A</sub> = 85°C (mW)
SOIC	Low-K	719	139	7	288

	V <sub>pp</sub> < 500 mV	1.2		3.1	1.1		3.1	1.1		3.1	
	V <sub>pp</sub> > 500 mV	1.4		3.1	1.3		3.1	1.3		3.1	
IIH	Input HIGH Current			150			150			150	μΑ
IIL	Input LOW current										
	D	0.5			0.5			0.5			μA
	D	-600			-600			-600			

(1) Device will meet the specifications after thermal balance has been established when mounted in a socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are assured only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

(2) Input and output parameters vary 1:1 with V<sub>CC</sub>. V<sub>EE</sub> can vary  $\pm 0.3$  V

(3) Outputs are terminated through a 50  $\Omega$  resistor to V<sub>CC</sub> – 2.0 V.

(4) V<sub>IHCMR</sub> min varies 1:1 with V<sub>EE</sub>, V<sub>IHCMR</sub> max varies 1:1 with V<sub>CC</sub>. The V<sub>IHCMR</sub> range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between V<sub>PP</sub> min and 1 V.

## LVPNECL DC CHARACTERISTICS<sup>(1)</sup> ( $V_{EE} = -3.3 \text{ V}$ ; $V_{CC} = 0.0 \text{ V}$ ;) <sup>(2)</sup>

(1) Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are assured only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

(2) V<sub>EE</sub> can vary ±0.3 V

(3) Maximum switching frequency measured at output amplitude of 300 mVpp.

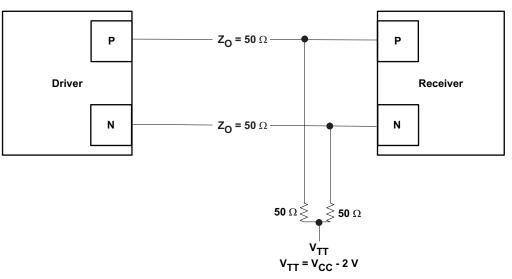

(4) Within-device skew is defined as identical transitions on similar paths through a device.

(5) Device-Device Skew is defined as identical transitions at identical Vcc levels.

(6) Duty cycle skew is the difference between a t<sub>PLH</sub> and t<sub>PHL</sub> propagation delay through a device.

(7) V<sub>PP(min)</sub> is the minimum input swing for which AC parameters are assured.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

- C. Publication IPC-7351 is recommended for alternate designs.
- D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
   E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

#### **IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
