## SN74LVC16646A 16-BIT BUS TRANSCEIVER AND REGISTER WITH 3-STATE OUTPUTS

SCES408B-AUGUST 2002-REVISED APRIL 2005

#### **FEATURES**

- Member of the Texas Instruments Widebus™ Family
- Operates From 1.65 V to 3.6 V
- Inputs Accept Voltages to 5.5 V
- In Transparent Mode, Max t<sub>pd</sub> of 5.2 ns at 3.3 V
- Typical V<sub>OLP</sub> (Output Ground Bounce)
   < 0.8 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> = 25°C
- Typical V<sub>OHV</sub> (Output V<sub>OH</sub> Undershoot)
   2 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> = 25°C
- Supports Mixed-Mode Signal Operation on All Ports (5-V Input/Output Voltage With 3.3-V V<sub>CC</sub>)
- I<sub>off</sub> Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- ESD Protection Exceeds JESD 22
  - 2000-V Human-Body Model (A114-A)
  - 1000-V Charged-Device Model (C101)

# DGG, DGV, OR DL PACKAGE (TOP VIEW)

#### **DESCRIPTION/ORDERING INFORMATION**

This 16-bit bus transceiver and register is designed for 1.65-V to 3.6-V  $V_{CC}$  operation.

The SN74LVC16646A can be used as two 8-bit transceivers or one 16-bit transceiver. The device consists of bus transceiver circuits, D-type flip-flops, and control circuitry arranged for multiplexed transmission of data directly from the input bus or from the internal registers.

### ORDERING INFORMATION

T <sub>A</sub>	PACK	AGE <sup>(1)</sup>	ORDERABLE PART NUMBER	TOP-SIDE MARKING	
-40°C to 85°C	SSOP – DL	Tube	SN74LVC16646ADL	LVC16646A	
	330F - DL	Tape and reel	SN74LVC16646ADLR		
-40 C to 65 C	TSSOP - DGG	Tape and reel	SN74LVC16646ADGGR	LVC16646A	
	TVSOP - DGV	Tape and reel	SN74LVC16646ADGVR	LD646A	

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Widebus is a trademark of Texas Instruments.

## SN74LVC16646A 16-BIT BUS TRANSCEIVER AND REGISTER WITH 3-STATE OUTPUTS

SCES408B-AUGUST 2002-REVISED APRIL 2005

### DESCRIPTION/ORDERING INFORMATION (CONTINUED)

Data on the A or B bus is clocked into the registers on the low-to-high transition of the appropriate clock (CLKAB or CLKBA) input. Figure 1 illustrates the four fundamental bus-management functions that can be performed with the SN74LVC16646A.

Output-enable ( $\overline{OE}$ ) and direction-control (DIR) inputs control the transceiver functions. In the transceiver mode, data present at the high-impedance port can be stored in either register or in both. The select-control (SAB and SBA) inputs can multiplex stored and real-time (transparent mode) data. The circuitry used for select control eliminates the typical decoding glitch that occurs in a multiplexer during the transition between stored and real-time data. DIR determines which bus receives data when  $\overline{OE}$  is low. In the isolation mode ( $\overline{OE}$  high), A data can be stored in one register and/or B data can be stored in the other register.

This device is fully specified for partial-power-down applications using I<sub>off</sub>. The I<sub>off</sub> circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

When an output function is disabled, the input function still is enabled and can be used to store and transmit data. Only one of the two buses, A or B, can be driven at a time.

Inputs can be driven from either 3.3-V or 5-V devices. This feature allows the use of these devices as translators in a mixed 3.3-V/5-V system environment.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

#### **FUNCTION TABLE**

		INP	UTS			DATA	\ I/O <sup>(1)</sup>	OPERATION OF FUNCTION	
ŌĒ	DIR	CLKAB	CLKBA	SAB	SBA	A1-A8	B1-B8	OPERATION OR FUNCTION	
Х	Х	1	Х	Х	Х	Input	Unspecified	Store A, B unspecified <sup>(1)</sup>	
X	X	Χ	$\uparrow$	X	Χ	Unspecified	Input	Store B, A unspecified <sup>(1)</sup>	
Н	Х	<b>↑</b>	1	Х	Х	Input	Input	Store A and B data	
Н	X	H or L	H or L	X	Χ	Input	Input	Isolation, hold storage	
L	L	Х	Х	Х	L	Output	Input	Real-time B data to A bus	
L	L	Χ	H or L	X	Н	Output	Input	Stored B data to A bus	
L	Н	Х	Х	L	Х	Input	Output	Real-time A data to B Bus	
L	Н	H or L	Χ	Н	X	Input	Output	Stored A data to bus	

<sup>(1)</sup> The data-output functions can be enabled or disabled by various signals at  $\overline{\text{OE}}$  or DIR. Data-input functions always are enabled, i.e., data at the bus terminals is stored on every low-to-high transition of the clock inputs.

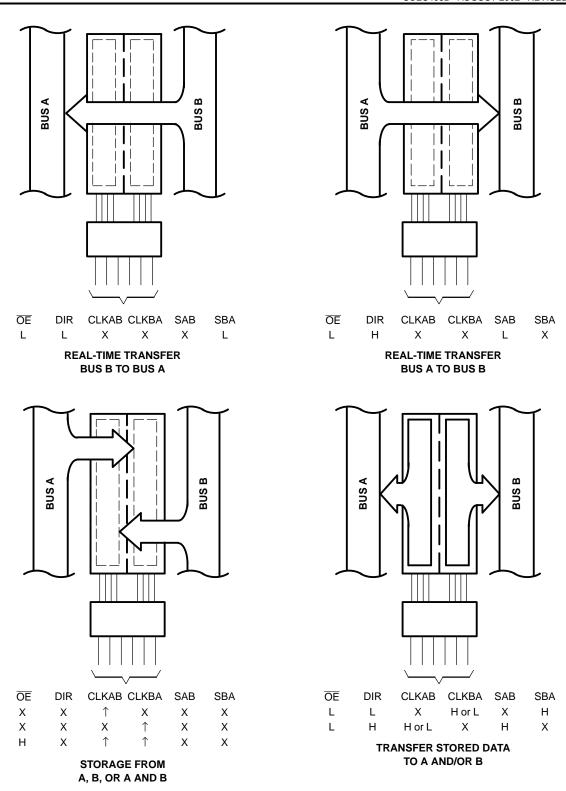

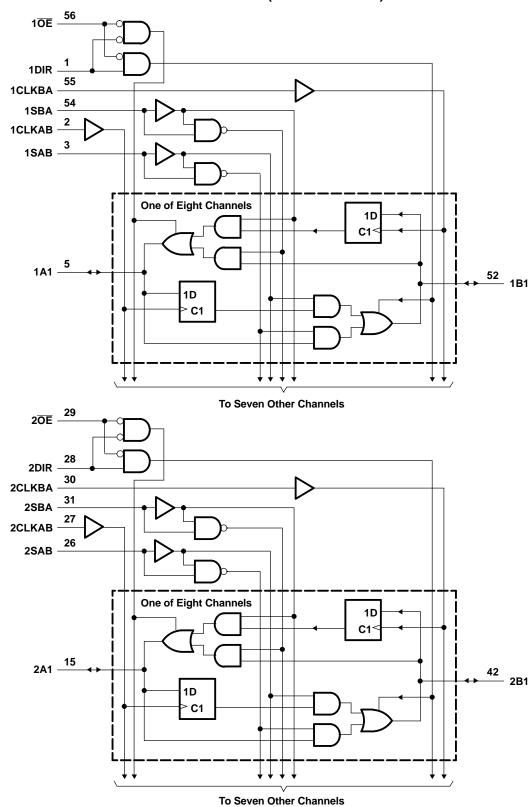

Figure 1. Bus-Management Functions

### **LOGIC DIAGRAM (POSITIVE LOGIC)**

SCES408B-AUGUST 2002-REVISED APRIL 2005

# Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
$V_{CC}$	Supply voltage range		-0.5	6.5	V
VI	Input voltage range <sup>(2)</sup>		-0.5	6.5	V
Vo	Voltage range applied to any output in the h	igh-impedance or power-off state <sup>(2)</sup>	-0.5	6.5	V
Vo	Voltage range applied to any output in the hi	igh or low state <sup>(2)(3)</sup>	-0.5	V <sub>CC</sub> + 0.5	V
I <sub>IK</sub>	Input clamp current	V <sub>1</sub> < 0		<b>-</b> 50	mA
I <sub>OK</sub>	Output clamp current		<b>-</b> 50	mA	
Io	Continuous output current			±50	mA
	Continuous current through each V <sub>CC</sub> or GN	D		±100	mA
		DGG package		64	
$\theta_{JA}$	Package thermal impedance <sup>(4)</sup>	DGV package		48	°C/W
		DL package		56	
T <sub>stg</sub>	Storage temperature range	-65	150	°C	

<sup>(1)</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

## **Recommended Operating Conditions**(1)

			MIN	MAX	UNIT	
V	Supply voltage	Operating	1.65	3.6	V	
$V_{CC}$	Supply voltage	Data retention only	1.5		V	
		V <sub>CC</sub> = 1.65 V to 1.95 V	0.65 × V <sub>CC</sub>			
$V_{IH}$	High-level input voltage	$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$	1.7		V	
		V <sub>CC</sub> = 2.7 V to 3.6 V	2			
		V <sub>CC</sub> = 1.65 V to 1.95 V		0.35 × V <sub>CC</sub>		
$V_{IL}$	Low-level input voltage	$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$		0.7	V	
		V <sub>CC</sub> = 2.7 V to 3.6 V		0.8		
V <sub>I</sub>	Input voltage		0	5.5	V	
\/	Output valtage	High or low state	0	V <sub>CC</sub>	V	
$V_{O}$	Output voltage	3-state	0	5.5	V	
		V <sub>CC</sub> = 1.65 V		-4		
	Himb lovel output ourrent	$V_{CC} = 2.3 \text{ V}$		-8	A	
I <sub>OH</sub>	High-level output current	V <sub>CC</sub> = 2.7 V		-12	mA	
		V <sub>CC</sub> = 3 V		-24		
		V <sub>CC</sub> = 1.65 V		4		
	Low lovel output ourrent	V <sub>CC</sub> = 2.3 V		8	A	
I <sub>OL</sub>	Low-level output current	V <sub>CC</sub> = 2.7 V		12	mA	
		V <sub>CC</sub> = 3 V		24		
Δt/Δν	Input transition rise or fall rate			10	ns/V	
T <sub>A</sub>	Operating free-air temperature		-40	85	°C	

<sup>(1)</sup> All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

<sup>(3)</sup> The value of V<sub>CC</sub> is provided in the recommended operating conditions table.

<sup>(4)</sup> The package thermal impedance is calculated in accordance with JESD 51-7.

## **SN74LVC16646A 16-BIT BUS TRANSCEIVER AND REGISTER** WITH 3-STATE OUTPUTS

#### **Electrical Characteristics**

over recommended operating free-air temperature range (unless otherwise noted)

	PARAMETER	TEST CONDITIO	NS	V <sub>cc</sub>	MIN	TYP <sup>(1)</sup>	MAX	UNIT

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

- 8. Board assembly site may have different recommendations for stencil design.

#### IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
