SIEMENS AG**IC-SPECIFICATION****TDA 4321 XS**

Functional Description, Application

The FM-IF-Demodulator TDA 4321 XS has been developed especially for car radio applications. The on-chip multipath identification circuit activates an interference suppression circuit in case of multipath interferences.

The TDA 4321 XS includes an:

- 7stage limiter amplifier
- Coincidence demodulator
- Counter output with request input
- Field strength output
- Analog Multipath identification circuit
- Adjustable muting depth (with full muting $\geq 80\text{dB}$)
- STS function.

This device is ESD protected.

SIEMENS AG**IC-SPECIFICATION****TDA 4321 XS**

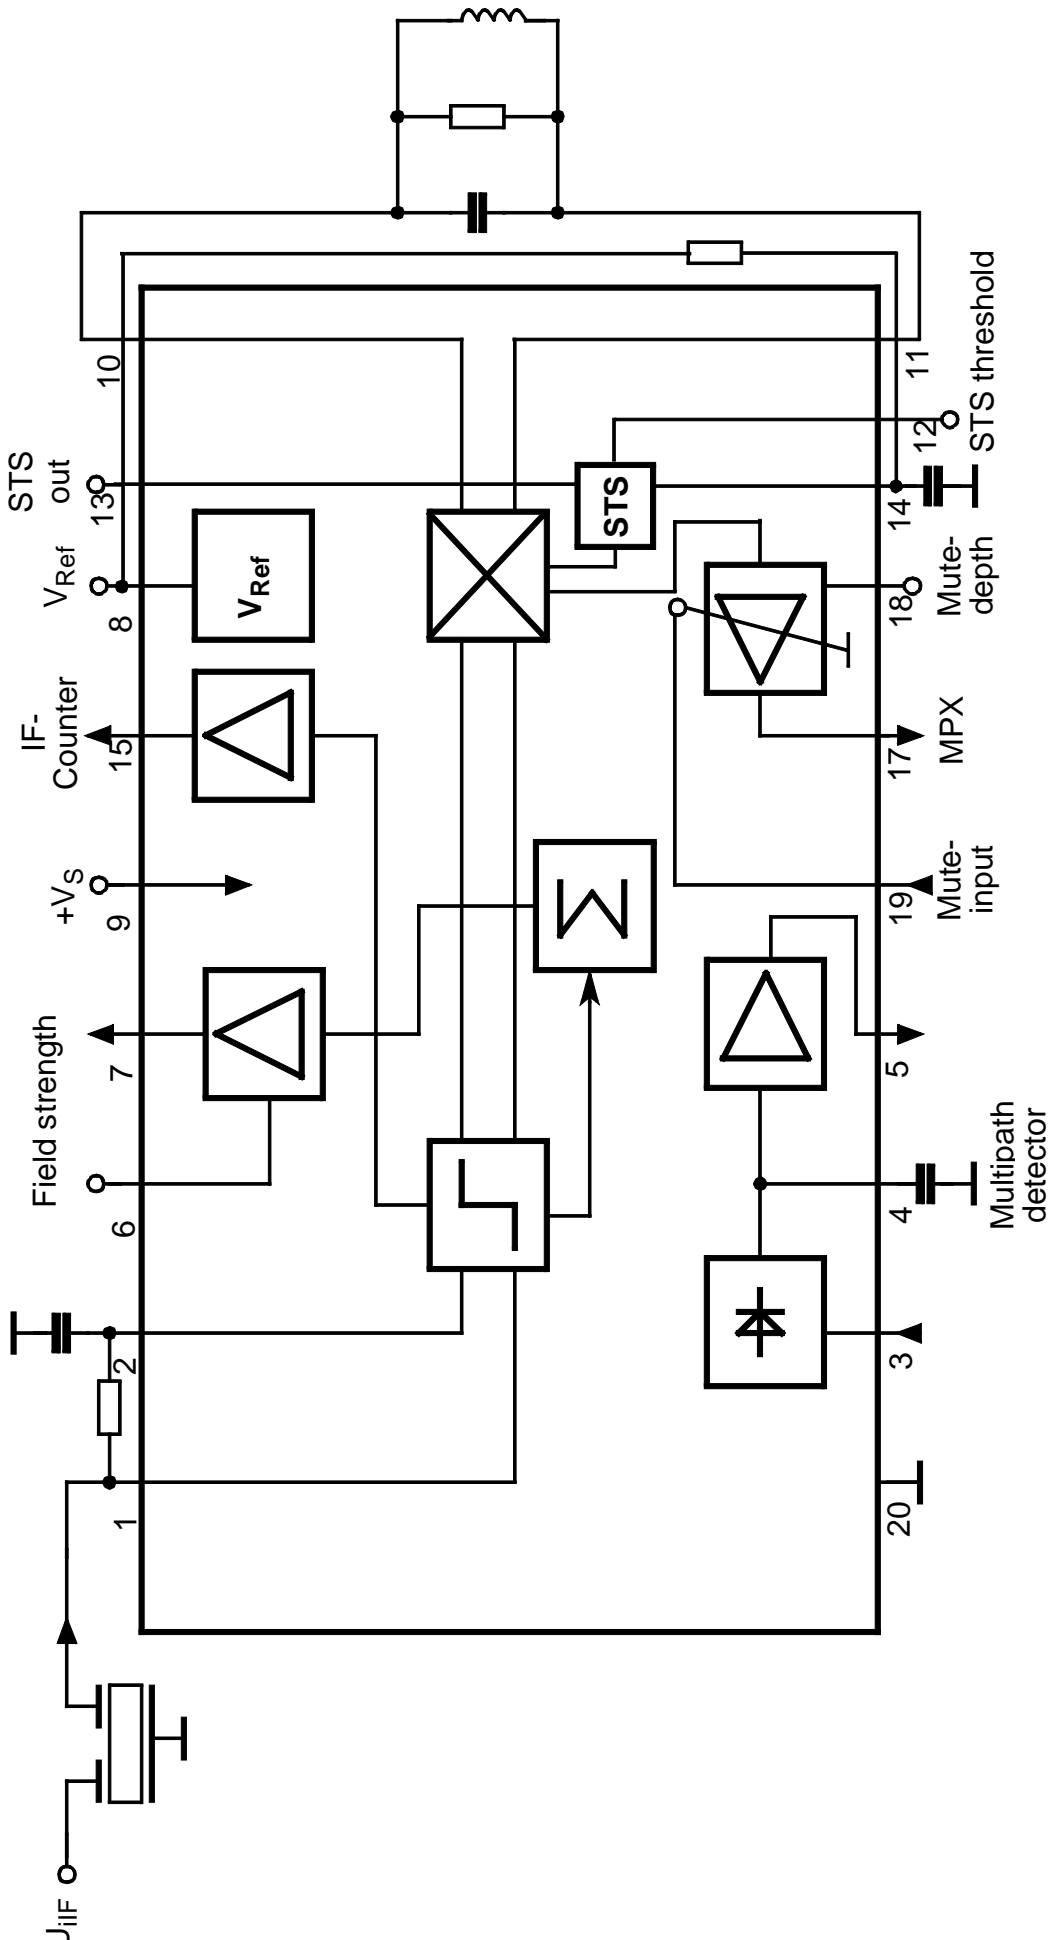

Circuit Description

The IC includes a 7 stage capacitive coupled-limiter amplifier with coincidence demodulator and AF output. The AF output signal can be continuously attenuated to decrease the noise.

In case of multipath interferences, the TDA 4321 XS includes an identification circuitry with analog output.

There is a field strength output (with min. 76 dB dynamic range, typ. ± 1 dB nonlinearity and typ. ± 3 dB temperature drift), an IF-Counter output and an adjustable muting (with full muting ≥ 80 dB). An STS output with adjustable threshold and stop window is available.

Pin Assignment

- 1 IF input
- 2 IF input bias
- 3 Multipath identification input
- 4 Rectifier time constant
- 5 Multipath identification output
- 6 Field strength adjust
- 7 Field strength output
- 8 Reference voltage output
- 9 Supply voltage
- 10 Demodulator circuit
- 11 Demodulator circuit
- 12 STS threshold
- 13 STS output
- 14 STS filter time constant and stop window width
- 15 IF-Counter output
- 16 NC
- 17 MPX output
- 18 Mute depth
- 19 Mute input
- 20 Ground

Package Outline

Plastic-Package
TSSO-P 20-1

Index Marking

- 1) Does not include plastic or metal protrusion of 0.15 max. per side
- 2) Does not include dambar protrusion of 0.08 max. per side

SIEMENS AG**IC-SPECIFICATION****TDA 4321 XS****Absolute Maximum Ratings**

The maximal ratings may not be exceeded under any circumstances, not even momentarily and individually, as permanent damage to the IC will result.

#	Max. Ratings for ambient temperature T_{amb} -40 °C to +85 °C	Symbol	Min	Max	Units	Remarks
1	Supply voltage	V_S	0	+13.5	V	
2	Junction temperature	T_j		+150	°C	
3	Storage temperature	T_s		+125	°C	
4	ESD voltage, HBM (1.5 k Ω , 100pF)	V_{ESD}	-4	+4	kV	
5	Thermal Resistance	R_{thsa}		115	K/W	

SIEMENS AG**IC-SPECIFICATION****TDA 4321 XS**

Operational Range

Within the operational range the IC operates as described in the circuit description. The AC / DC characteristic limits are not guaranteed.

#	Parameter	Symbol	Min	Max	Units	Remarks
1	Supply voltage	V_S	+7.5	+11	V	
2	Ambient temperature	T_{amb}	-40	+85	°C	

SIEMENS AG**IC-SPECIFICATION****TDA 4321 XS****AC / DC Characteristics**

AC / DC characteristics involve the spread of values guaranteed within the specified supply voltage and ambient temperature range. Typical characteristics are the median of the production.

V_F Characteristic

D1

V_F - Dynamic : The dynamic range of V_F voltage is determined by the test points M1 through M4 as follows:

- M1: test point (at $V_{ilF} = -60$ dBm) supplies V_F (M1)
- M2: test point (at $V_{ilF} = -20$ dBm) supplies V_F (M2)
- M3: test point (at $V_{ilF} = -90$ dBm) supplies V_F (M3)
- M4: test point (at $V_{ilF} = +5$ dBm) supplies V_F (M4)

Hence follows :

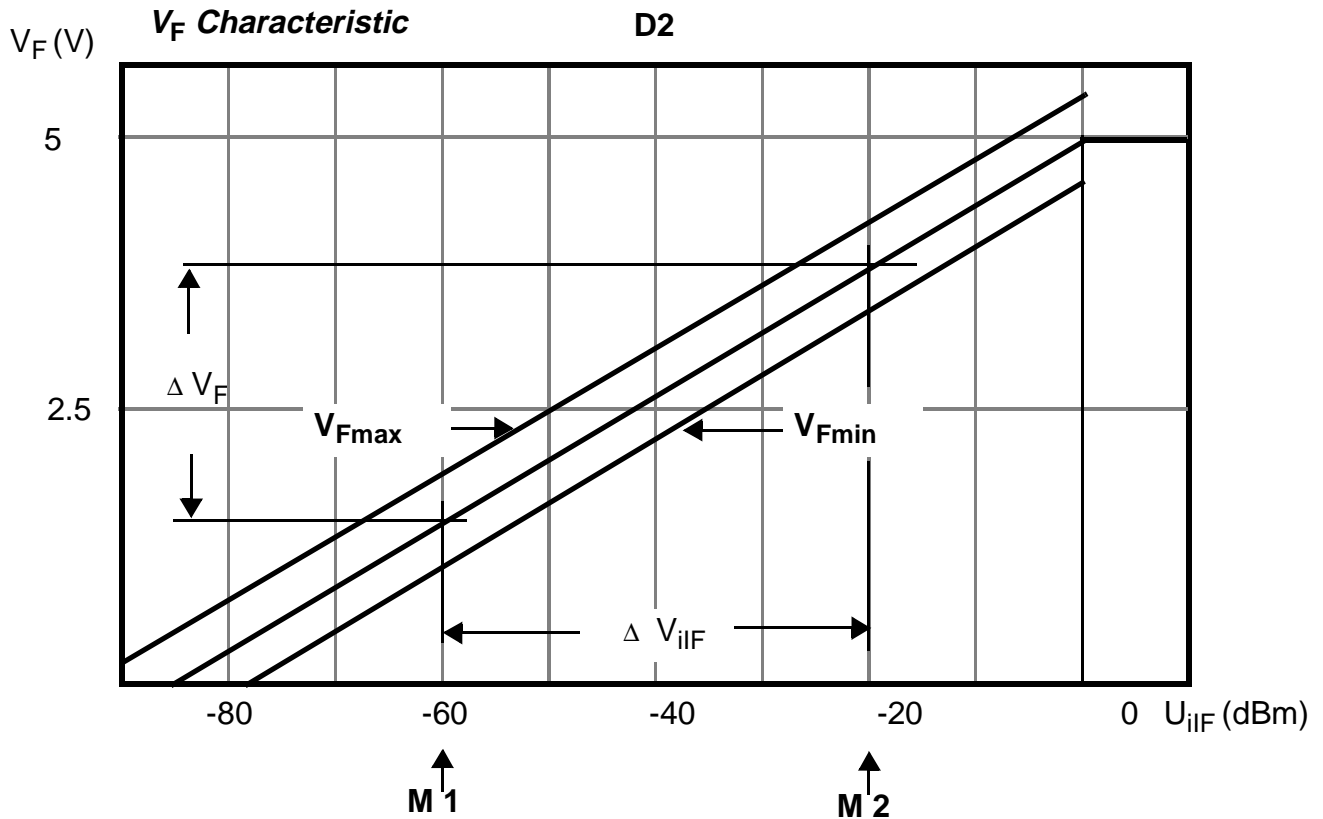

$$M_{VFmax} := -20 \text{ dBm} + \frac{U_F(M4) - U_F(M2)}{U_F(M2) - U_F(M1)} \times 40 \text{ dB}$$

$$M_{VFmin} := -60 \text{ dBm} - \frac{U_F(M1) - U_F(M3)}{U_F(M2) - U_F(M1)} \times 40 \text{ dB}$$

$$VF - Dynamic = M_{VFmax} - M_{VFmin}$$

TDA 4321 XS

Diagrams

Test points to determine VF linearity

VF - Linearity is determined at 25 °C

$$\text{Slope} : m = \frac{V_F (M2) - V_F (M1)}{40 \text{ dB}}$$

The tolerance range of the VF - linearity is determined by two parallel lines:

$$V_{Fmax} = V_F (M1) + m (M + 60 \text{ dB} + 1 \text{ dB})$$

$$V_{Fmin} = V_F (M1) + m (M + 60 \text{ dB} - 1 \text{ dB})$$

The V_F values within the V_F dynamic range ($M_{V_{Fmin}} \leq M \leq M_{V_{Fmax}}$) must be inside the predetermined tolerance range:

$$V_{Fmin} \leq V_F (M) \leq V_{Fmax}$$

TDA 4321 XS

Diagrams

Test points to determine V_F temperature drift

V_F -Temperatur - Drift : It is determined within -40 bis +85 °C

$$\text{Slope } : m = \frac{U_F (M2) - U_F (M1)}{40 \text{ dB}} \quad (\text{at } 25 \text{ }^\circ\text{C})$$

The tolerance range of the V_F temperature drift is determined by two parallel lines:

$$V_{Fmax} = V_F (M1) + m (M + 60 \text{ dB} + 3\text{dB})$$

$$V_{Fmin} = V_F (M1) + m (M + 60 \text{ dB} - 3\text{dB})$$

The V_F values for temperatures between -40 to +85 °C within the V_F dynamic range (M_{V_{Fmin}} ≤ V_F ≤ M_{V_{Fmax}}) must be inside the predetermined tolerance field:

$$V_{Fmin} \leq V_F (M) \leq V_{Fmax}$$
