LM342 Series 3-Terminal Positive Regulators

General Description

The LM342-XX series of three-terminal regulators is available with several fixed output voltages, making them useful in a wide range of applications. One of these is local on card regulation, eliminating the distribution problems associated with single point regulation. The voltages available allow these regulators to be used in logic systems, instrumentation, HiFi, and other solid state electronic equipment. Although designed primarily as fixed voltage regulators these devices can be used with external components to obtain adjustable voltages and currents.

The LM342-XX series is available in the plastic TO-202 package. This package allows these regulators to deliver over 0.25A if adequate heat sinking is provided. Current limiting is included to limit the peak output current to a safe value. Safe area protection for the output transistor is provided to limit internal power dissipation. If internal power dissipation becomes too high for the heat sinking provided, the thermal shutdown circuit takes over, preventing the IC from overheating.

Considerable effort was expended to make the LM342-XX series of regulators easy to use and minimize the number of external components. It is not necessary to bypass the

output, although this does improve transient response. Input bypassing is needed only if the regulator is located far from the filter capacitor of the power supply.

For output voltage other than 5V, 12V and 15V the LM117 series provides an output voltage range from 1.2V to 57V.

Features

- Output current in excess of 0.25A
- Internal thermal overload protection
- No external components required
- Output transistor safe area protection
- Internal short circuit current limit
- Available in plastic TO-202 package
- Special circuitry allows start-up even if output is pulled to negative voltage (\pm supplies)

Voltage Range

LM342-5.0	5V
LM342-12	12V
LM342-15	15V

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics.

Note 2: The electrical characteristics data represent pulse test conditions with junction temperatures as shown at the initiation of tests.

Note 3: The temperature coefficient of V_{OUT} is typically within 0.01% $V_O/^{\circ}C$.

Typical Applications

Fixed Output Regulator

TL/H/10485-4

*Required if the regulator is located far from power supply filter

**Although not required, C2 does improve transient response. (If needed, use 0.1 μF ceramic disc.)

Adjustable Output Regulator

TL/H/10485-5

$$V_O = 5V + (5V/R1 + I_Q) R2$$

$$5V/R1 > 3I_Q, \text{ Load Regulation (LR)} = [(R1 + R2)/R1] \times (L_r \text{ of LM342-05})$$

Current Regulator

TL/H/10485-6

$$I_{OUT} = V^{2-3}/R1 + I_Q$$

$$\Delta I_Q \leq 1.5 \text{ mA over line and load changes}$$

Typical Applications (Continued)

High Output Voltage Regulator

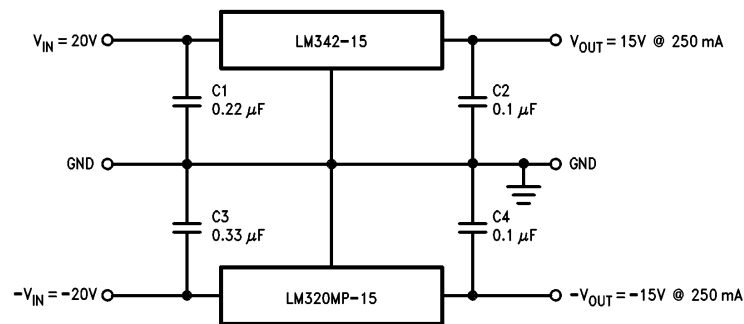

TL/H/10485-7

*Necessary if regulator is located far from the power supply filter

**D3 aids in full load start-up and protects the regulator during short circuits from high input to output voltage differentials

± 15V, 250 mA Dual Power Supply

TL/H/10485-8

Variable Output Regulator 0.5V–18V

$$V_{OUT} = V_G + 5V, R1 = (-V_{IN}/I_Q \text{ LM342})$$

$$V_{OUT} = 5V(R2/R4) \text{ for } (R2 + R3) = (R4 + R5)$$

A 0.5V output will correspond to $(R2/R4) = 0.1$, $(R3/R4) = 0.9$
