

SILICON HIGH SPEED POWER TRANSISTOR

2SA 1078

SILICON PNP RING EMITTER TRANSISTOR (RET)

September 1979

The 2SA1078 is a silicon PNP general purpose, medium power transistor fabricated with Fujitsu's unique Ring Emitter Transistor (RET) technology. RET devices are constructed with multiple emitters connected through diffused ballast resistors which provide uniform current density. This structure permits the design of medium power transistors with exceptional frequency response in high current applications.

The 2SA1078 is especially well-suited for High frequency power amplifiers, Audio power amplifiers and drivers. A NPN complement, 2SC2528, is available.

- High $f_T = 140$ MHz (typ)
- Excellent Safe Operating Area
- Improved reverse Second-Breakdown Capability
- Excellent Current Gain Linearity
