General Description

The APL5835 is a 3-pin low dropout linear regulator with 2.0% accuracy of output voltage over line, load and temperature variations. Dropout voltage at 450mA output current is less than 1.3V. Both output current limiting and thermal shutdown are built in to provide maximal protection to the APL5835 against fault conditions. The over current and thermal shutdown circuits become active when the current exceed 450mA, or the junction temperature reach 150°C. Normal operation is recovered when junction temperature drops below 130°C.
