查询ASM3P2109A供应商

捷多邦,专业PCB打样工厂,24小时加急出货

# October 2003

# ASM3P2109A

### rev 0.3

### PRELIMINARY INFORMATION

# Low Power EMI Reduction IC

### Features

- FCC approved method of EMI attenuation.
- Provides up to 15dB EMI reduction.
- Generates a 4X REF EMI spread output
- Spectrum clock of the input frequency.
- Optimized for input frequency range from 10 to 20MHz.
- External Loop Filter for configurability and flexibility in application and design (spread percentage adjust)
- Reference Output
- Power Down Mode
- Very Low Cycle-to-Cycle Jitter.
- 3.3V operating Range
- CMOS / TTL compatible inputs and outputs
- Available in 8-pin SOIC and 8-pin TSSOP packages.

## **Product Description**

The ASM3P2109A device is a versatile spread spectrum Frequency Synthesizer / Modulator designed specifically for a wide Range of input clock frequencies from 10MHz to 20MHz with a 4X multiplier for output clock frequencies from 40MHz to 80 MHz.

The ASM3P2109A generates an EMI reduced clock signal from a crystal, ceramic resonator, or system clock. The ASM3P2109A generates a range of modulation rates and deviations (spread) from Center Frequency based upon the input frequency, and is set / determined via an external filter network (see Loop Filter Selection table)

The ASM3P2109A reduces Electro Magnetic Interference (EMI), at the Clock Source, allowing system wide reduction of EMI on downstream clock and data dependant signals.

The resulting EMI reduction provides for significant cost savings by reducing the number of circuit board layers and shielding that are traditionally associated with designs in order to achieve EMI regulatory compliance.

The ASM3P2109A modulates the output of a single PLL in order to "spread" the bandwidth of a synthesized clock, thereby decreasing the Peak amplitudes of its associated harmonics. This results in significantly lower radiated EMI compared to the narrow band signal produced by standard oscillators and most clock synthesizers & generators. This technique of lowering EMI by increasing the signals bandwidth is called Spread Spectrum Clocking (SSC). The ASM3P2109A utilizes the most efficient and optimized modulation profile approved by the FCC, and is implemented using a proprietary, All-Digital method.

### Applications

The ASM3P2109A is targeted towards the Consumer and PC/Data Processing, or Computation markets. Entertainment devices, LCD displays, Notebook computers, PC peripheral devices, embedded systems, PDA's, and hand held devices provide a platform to take full advantage of the feature set of the ASM3P2109A.

Alliance Semiconductor

Pin#	Pin Name	Туре	Description
			Crystal Connection or external frequency input. This
			pin has dual functions - it may be connected to an
		1	external XTAL or driven by an external LVCMUS
1	AIN / CENIN	Input	REF CIOCK.
_			Crystal connection. If using an external REFerence
2	XOUT	Output	this pin MUST be left open
3	PD#	Input	Power Down (active Low)
			External Loop Filter for the PLL. By changing the
			value of the CRC circuit, the percentage spread wil
			be adjusted accordingly (see filter selection table )
4	LF	Input	
5	VSS	Power	Power Return, Ground
6	Mod_OUT	Output	Spread Spectrum Clock Signal Output
_			Provides a Reference output for the input frequency
7	REF_OUT	Output	
8	VDD	Power	Device Power Supply
