## Triple 2-channel analogue multiplexer/demultiplexer

## HEF4053B MSI

### DESCRIPTION

The HEF4053B is a triple 2-channel analogue multiplexer/demultiplexer with a common enable input ( $\bar{E}$ ). Each multiplexer/demultiplexer has two independent inputs/outputs ( $Y_0$  and  $Y_1$ ), a common input/output ( $Z$ ), and select inputs ( $S_n$ ). Each also contains two-bidirectional analogue switches, each with one side connected to an independent input/output ( $Y_0$  and  $Y_1$ ) and the other side connected to a common input/output ( $Z$ ).

With  $\bar{E}$  LOW, one of the two switches is selected (low impedance ON-state) by  $S_n$ . With  $\bar{E}$  HIGH, all switches are in the high impedance OFF-state, independent of  $S_A$  to  $S_C$ .

$V_{DD}$  and  $V_{SS}$  are the supply voltage connections for the digital control inputs ( $S_A$  to  $S_C$  and  $\bar{E}$ ).

The  $V_{DD}$  to  $V_{SS}$  range is 3 to 15 V. The analogue inputs/outputs ( $Y_0$ ,  $Y_1$  and  $Z$ ) can swing between  $V_{DD}$  as a positive limit and  $V_{EE}$  as a negative limit.  $V_{DD}-V_{EE}$  may not exceed 15 V.

For operation as a digital multiplexer/demultiplexer,  $V_{EE}$  is connected to  $V_{SS}$  (typically ground).

PINNING

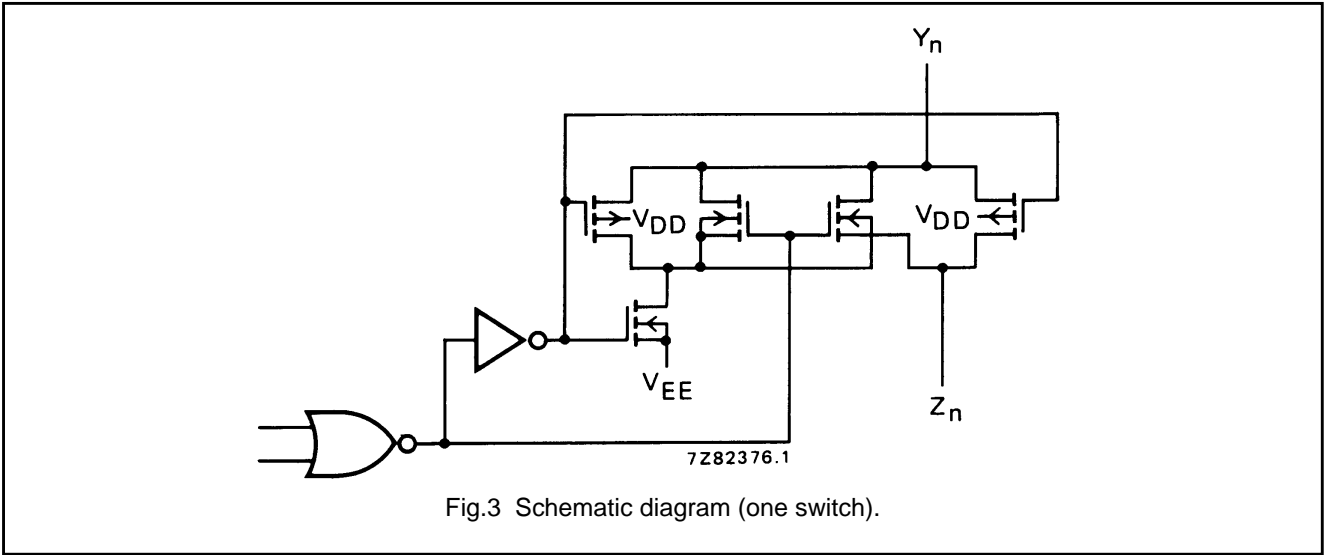

$Y_{0A}$ to $Y_{0C}$	independent inputs/outputs
$Y_{1A}$ to $Y_{1C}$	independent inputs/outputs
$S_A$ to $S_C$	select inputs
$\bar{E}$	enable input (active LOW)
$Z_A$ to $Z_C$	common inputs/outputs

FUNCTION TABLE

INPUTS		CHANNEL ON
$\bar{E}$	$S_n$	
L	L	$Y_{0n}-Z_n$
L	H	$Y_{1n}-Z_n$
H	X	none

Notes

1. H = HIGH state (the more positive voltage)  
L = LOW state (the less positive voltage)  
X = state is immaterial

RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)

Supply voltage (with reference to $V_{DD}$ )	$V_{EE}$	-18 to +0,5 V
--	----------	---------------

Note

1. To avoid drawing  $V_{DD}$  current out of terminal Z, when switch current flows into terminals Y, the voltage drop across the bidirectional switch must not exceed 0,4 V. If the switch current flows into terminal Z, no  $V_{DD}$  current will flow out of terminals Y, in this case there is no limit for the voltage drop across the switch, but the voltages at Y and Z may not exceed  $V_{DD}$  or  $V_{EE}$ .

# Triple 2-channel analogue multiplexer/demultiplexer

## HEF4053B MSI

### APPLICATION INFORMATION

Some examples of applications for the HEF4053B are:

- Analogue multiplexing and demultiplexing.
- Digital multiplexing and demultiplexing.
- Signal gating.

### NOTE

If break before make is needed, then it is necessary to use the enable input.
