**TC74HC367AP, TC74HC367AF, TC74HC367AFN

## HEX BUS BUFFER

TC74HC367AP / AF / AFN NON-INVERTED (3-STATE)

TC74HC368AP / AF / AFN INVERTED (3-STATE)

(Note) The JEDEC SOP (FN) is not available in Japan.

The TC74HC367A and TC74HC368A are high speed CMOS 3-STATE BUS BUFFERs fabricated with silicon gate C<sup>2</sup>MOS technology.

They achieve the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation. They contain six buffers; four buffers are controlled by an enable input ( $\bar{G}_1$ ), and the other two buffers are controlled by another enable input ( $\bar{G}_2$ ). The outputs of each buffer group are enabled when  $\bar{G}_1$  and/or  $\bar{G}_2$  inputs are held low; if held high, these outputs are in a high impedance state.

The TC74HC367A is a non-inverting output type, while the TC74HC368A is an inverting output type.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.
